## PART I ● Patterns and Processes of Becoming: A Framework for Understanding Animal Development

1

### The Making of a Body and a Field

Introduction to Developmental Biology 1

### “How Are You, You?” Comparative Embryology and the Questions of Developmental Biology 2

#### The Cycle of Life 6

An animal's life cycle 6

A flowering plant's life cycle 7

#### Example 1: A Frog's Life 8

Gametogenesis and fertilization 9

Cleavage and gastrulation 9

Organogenesis 9

Metamorphosis and gametogenesis 9

#### Example 2: Even a Weed Can Have a Flower-Full Life 11

Reproductive and gametophytic phases 12

Embryogenesis and seed maturation 13

Vegetative phases: From sporophytic growth  
to inflorescence identity 13

#### An Overview of Early Animal Development 13

Patterns of cleavage 13

Gastrulation: “The most important time  
in your life” 14

The primary germ layers and early organs 17

Understanding cell behavior in the embryo 19

#### A Basic Approach to Watch Development 20

Approaching the bench: Find it, lose it, move it 20

Direct observation of living embryos 20

Dye marking 21

Genetic labeling 22

Transgenic DNA chimeras 22

#### Evolutionary Embryology 24

Understanding the tree of life to see  
our developmental relatedness 27

The developmental history of land plants 31

### Personal Significance: Medical Embryology and Teratology 34

Genetic malformations and syndromes 35

Disruptions and teratogens 35

#### Coda 36

2

### Specifying Identity

Mechanisms of Developmental Patterning 39

#### Levels of Commitment 39

Cell differentiation 39

Cell fate maturation 40

#### Autonomous Specification 41

Cytoplasmic determinants and autonomous  
specification in the tunicate 41

#### Conditional Specification 44

Cell position matters: Conditional specification  
in the sea urchin embryo 44

#### Syncytial Specification 47

Opposing axial gradients define position 48

3

### Differential Gene Expression

Mechanisms of Cell Differentiation 51

#### Defining Differential Gene Expression 51

#### A Quick Primer on the Central Dogma 52

#### Evidence for Genomic Equivalence 53

#### Anatomy of the Gene 55

Chromatin composition 55

Exons and introns 56

Major parts of a eukaryotic gene 56

- The transcription product and how it is processed 57  
 Noncoding regulatory elements: The on, off, and dimmer switches of a gene 57

### **Mechanisms of Differential Gene Expression: Transcription 62**

- Epigenetic modification: Modulating access to genes 62  
 Transcription factors regulate gene transcription 65  
 The gene regulatory network: Defining an individual cell 69

### **Mechanisms of Differential Gene Expression: Pre-messenger RNA Processing 70**

- Creating families of proteins through alternative pre-mRNA splicing 71

### **Mechanisms of Differential Gene Expression: mRNA Translation 72**

- Differential mRNA longevity 72  
 Stored oocyte mRNAs: Selective inhibition of mRNA translation 73  
 Ribosomal selectivity: Selective activation of mRNA translation 73  
 microRNAs: Specific regulation of mRNA translation and transcription 74  
 Control of RNA expression by cytoplasmic localization 76

### **Mechanisms of Differential Gene Expression: Posttranslational Protein Modification 77**

**Coda 84**

## **Cell-to-Cell Communication**

### **Mechanisms of Morphogenesis 87**

#### **A Primer on Cell-to-Cell Communication 87**

#### **Adhesion and Sorting: Juxtacrine Signaling and the Physics of Morphogenesis 88**

- Differential cell affinity 89  
 The thermodynamic model of cell interactions 90  
 Cadherins and cell adhesion 91

#### **The Extracellular Matrix as a Source of Developmental Signals 93**

- Integrins: Receptors for extracellular matrix molecules 94

#### **The Epithelial-Mesenchymal Transition 94**

#### **Cell Signaling 95**

- Induction and competence 95

#### **Paracrine Factors: Inducer Molecules 100**

- Morphogen gradients 100  
 Signal transduction cascades: The response to inducers 101

- Fibroblast growth factors and the RTK pathway 102  
 FGFs and the JAK-STAT pathway 104  
 The Hedgehog family 105  
 The Wnt family 108  
 The TGF- $\beta$  superfamily 111  
 Other paracrine factors 112

### **The Cell Biology of Paracrine Signaling 117**

- Focal membrane protrusions as signaling sources 117

### **Juxtacrine Signaling for Cell Identity 120**

- The Notch pathway: Juxtaposed ligands and receptors for pattern formation 120  
 Paracrine and juxtacrine signaling in coordination: Vulval induction in *C. elegans* 121

## **Stem Cells**

### **Their Potential and Their Niches 127**

#### **The Stem Cell Concept 127**

- Division and self-renewal 127  
 Potency defines a stem cell 128

#### **Stem Cell Regulation 130**

#### **Pluripotent Cells in the Embryo 131**

- Meristem cells of the *Arabidopsis thaliana* embryo and beyond 132  
 Cells of the inner cell mass in the mouse embryo 134

#### **Adult Stem Cell Niches in Animals 135**

- Stem cells fueling germ cell development in the *Drosophila* ovary 136

#### **Adult Neural Stem Cell Niche of the V-SVZ 137**

- The neural stem cell niche of the V-SVZ 138

#### **The Adult Intestinal Stem Cell Niche 142**

- Clonal renewal in the crypt 142

#### **Stem Cells Fueling the Diverse Cell Lineages in Adult Blood 143**

- The hematopoietic stem cell niche 143

#### **The Mesenchymal Stem Cell: Supporting a Variety of Adult Tissues 146**

- Regulation of MSC development 146

#### **The Human Model System to Study Development and Disease 147**

- Pluripotent stem cells in the lab 147  
 Induced pluripotent stem cells 150  
 Organoids: Studying human organogenesis in a culture dish 153

### **Stem Cells: Hope or Hope? 156**

## PART II ● Gametogenesis and Fertilization: The Circle of Sex

### Sex Determination and Gametogenesis 159

#### Sex Determination 159

##### Chromosomal Sex Determination 159

##### The Mammalian Pattern of Sex Determination 160

- Gonadal sex determination in mammals 161
- Secondary sex determination in mammals:
  - Hormonal regulation of the sexual phenotype 166

##### Chromosomal Sex Determination in *Drosophila* 169

- Sex determination by dosage of X 169
- The *Sex-lethal* gene 170
- Doublesex*: The switch gene for sex determination 172

##### Environmental Sex Determination 173

##### Gametogenesis in Animals 174

- PGCs in mammals: From genital ridge to gonads 175
- Meiosis: The intertwining of life cycles 176
- Spermatogenesis in mammals 180
- Oogenesis in mammals 182

#### Sex Determination and Gametogenesis in Angiosperm Plants 184

##### Sex Determination 184

##### Gametogenesis 186

- Pollen 188
- The ovule 188

## PART III ● Early Development: Cleavage, Gastrulation, and Axis Formation

### Snails, Flowers, and Nematodes

Different Mechanisms for Similar Patterns of Specification 223

A Reminder of the Evolutionary Context That Built the Strategies Governing Early Development 223

### Fertilization Beginning a New Organism 193

#### Structure of the Gametes 193

- Sperm 194
- The egg 195
- Recognition of egg and sperm 198

#### External Fertilization in Sea Urchins 198

- Sperm attraction: Action at a distance 198
- The acrosome reaction 200
- Recognition of the egg's extracellular coat 201
- Fusion of the egg and sperm cell membranes 201
- Prevention of polyspermy: One egg, one sperm 202
- Activation of egg metabolism in sea urchins 206
- Fusion of genetic material in sea urchins 210

#### Internal Fertilization in Mammals 211

- Getting the gametes into the oviduct:
  - Translocation and capacitation 211
- In the vicinity of the oocyte: Hyperactivation, directed sperm migration, and the acrosome reaction 212
- Recognition at the zona pellucida 214
- Gamete fusion and the prevention of polyspermy 214
- Activation of the mammalian egg 216
- Fusion of genetic material 216

#### Fertilization in Angiosperm Plants 217

- Pollination and beyond: The progamic phase 217
- Pollen germination and tube elongation 218
- Pollen tube navigation 219
- Double fertilization 220

#### Coda 221

The diploblastic animals: Cnidarians and ctenophores 224

The triploblastic animals: Protostomes and deuterostomes 224

What's to develop next 226

#### Early Development in Snails 226

##### Cleavage in Snail Embryos 226

- Maternal regulation of snail cleavage 228
- Axis determination in the snail embryo 235

##### Gastrulation in Snails 237

## The Nematode *C. elegans* 238

### Cleavage and Axis Formation in *C. elegans* 239

- Rotational cleavage of the egg 240
- Anterior-posterior axis formation 241
- Dorsal-ventral and right-left axis formation 241
- Control of blastomere identity 242

### Gastrulation of 66 Cells in *C. elegans* 243

## The Genetics of Axis Specification in *Drosophila* 247

### Early *Drosophila* Development 249

- Fertilization 249
- Cleavage 250
- The mid-blastula transition 252
- Gastrulation 252

### The Genetic Mechanisms Patterning the *Drosophila* Body 254

### Segmentation and the Anterior-Posterior Body Plan 255

- Maternal gradients: Polarity regulation by oocyte cytoplasm 256
- The anterior organizing center: The Bicoid and Hunchback gradients 259
- The terminal gene group 260
- Summarizing early anterior-posterior axis specification in *Drosophila* 260

### Segmentation Genes 260

- Segments and parasegments 261
- The gap genes 262
- The pair-rule genes 263
- The segment polarity genes 265

### The Homeotic Selector Genes 268

### Generating the Dorsal-Ventral Axis 269

- Dorsal-ventral patterning in the oocyte 269
- Generating the dorsal-ventral axis within the embryo 270

### Axes and Organ Primordia: The Cartesian Coordinate Model 272

## Sea Urchins and Tunicates

### Deuterostome Invertebrates 275

### Early Development in Sea Urchins 275

- Early cleavage 276
- Blastula formation 277
- Fate maps and the determination of sea urchin blastomeres 278
- Gene regulatory networks and skeletogenic mesenchyme specification 279
- Specification of the vegetal cells 282

### Sea Urchin Gastrulation 283

- Ingression of the skeletogenic mesenchyme 283
- Invagination of the archenteron 286

### Early Development in Tunicates 288

- Cleavage 288
- The tunicate fate map 289
- Autonomous and conditional specification of tunicate blastomeres 290

## Amphibians and Fish 295

### Early Amphibian Development 295

### Fertilization, Cortical Rotation, and Cleavage 296

- Unequal radial holoblastic cleavage 297
- The mid-blastula transition: Preparing for gastrulation 298

### Amphibian Gastrulation 299

- Epiboly of the prospective ectoderm 300
- Vegetal rotation and the invagination of the bottle cells 300
- Involution at the blastopore lip 302
- Convergent extension of the dorsal mesoderm 304

### Progressive Determination of the Amphibian Axes 306

- Specification of the germ layers 306
- The dorsal-ventral and anterior-posterior axes 306

### The Work of Hans Spemann and Hilde Mangold: Primary Embryonic Induction 307

### Molecular Mechanisms of Amphibian Axis Formation 308

- How does the organizer form? 309

- Functions of the organizer 314
- Induction of neural ectoderm and dorsal mesoderm:
  - BMP inhibitors 314
- Conservation of BMP signaling during
  - dorsal-ventral patterning 318

### **Regional Specificity of Neural Induction along the Anterior-Posterior Axis 318**

### **Specifying the Left-Right Axis 322**

### **Early Zebrafish Development 322**

### **Zebrafish Cleavages: Yolking Up the Process 324**

### **Gastrulation and Formation of the Germ Layers 327**

- Progression of epiboly 327
- Internalization of the hypoblast 328
- The embryonic shield and the neural keel 329

### **Dorsal-Ventral Axis Formation 330**

- The fish blastopore lip 330
- Teasing apart the powers of Nodal and BMP during axis determination 331

### **Left-Right Axis Formation 332**

## **PART IV ● Building with Ectoderm: The Vertebrate Nervous System and Epidermis**

**13**

### **Neural Tube Formation and Patterning 363**

#### **Transforming the Neural Plate into a Tube: The Birth of the Central Nervous System 365**

- Primary neurulation 367
- Secondary neurulation 374

#### **Patterning the Central Nervous System 375**

- The anterior-posterior axis 375
- The dorsal-ventral axis 376
- Opposing morphogens 377

#### **All Axes Come Together 379**

**12**

### **Birds and Mammals 335**

#### **Early Development in Birds 336**

- Avian Cleavage 336
- Gastrulation of the avian embryo 338
- Axis specification and the avian “organizer” 342
- Left-right axis formation 343

#### **Early Development in Mammals 345**

- Mammalian cleavage 345
- Trophoblast or ICM? The first decision of the rest of your life 347
- Mammalian gastrulation 348
- Mammalian axis formation 351
- Twins 357

#### **Coda 359**

**14**

### **Brain Growth 381**

#### **Neuroanatomy of the Developing Central Nervous System 381**

- The cells of the developing central nervous system 381
- Tissues of the developing central nervous system 382

#### **Developmental Mechanisms**

##### **Regulating Brain Growth 386**

- Neural stem cell behaviors during division 386
- Neurogenesis: Building from the bottom up (or from the inside out) 387
- Glia as scaffold for the layering of the cerebellum and neocortex 389
- Signaling mechanisms regulating development of the neocortex 390

#### **Development of the Human Brain 392**

- Fetal neuronal growth rate after birth 392
- Hills raise the horizon for learning 393
- Genes for brain growth 396
- Changes in transcript quantity 396
- Teenage brains: Wired and unchained 396

15

## Neural Crest Cells and Axonal Specificity 399

### The Neural Crest 399

#### Regionalization of the Neural Crest 401

#### Neural Crest: Multipotent Stem Cells? 402

#### Specification of Neural Crest Cells 404

#### Neural Crest Cell Migration: Epithelial to Mesenchymal and Beyond 405

Delamination 406

The driving force of contact inhibition 408

Collective migration 409

#### Migration Pathways of Trunk Neural Crest Cells 410

The ventral pathway 410

The dorsolateral pathway 413

#### Cranial Neural Crest 414

#### The "Chase and Run" Model 416

An elaborate collaboration of pushes and pulls 417

#### Neural Crest-Derived Head Skeleton 418

#### Cardiac Neural Crest 419

### Establishing Axonal Pathways in the Nervous System 420

#### The Growth Cone: Driver and Engine of Axon Pathfinding 421

Rho, Rho, Rho your actin filaments down the signaling stream 423

#### Axon Guidance 423

#### The Intrinsic Navigational Programming of Motor Neurons 424

Cell adhesion: A mechanism to grab the road 426

Local and long-range guidance molecules:

The street signs of the embryo 426

Repulsion patterns: Ephrins and semaphorins 426

#### How Did the Axon Cross the Road? 428

...Netrin 428

Slit and Robo 428

#### The Travels of Retinal Ganglion Axons 431

Growth of the retinal ganglion axon to the optic nerve 431

Growth of the retinal ganglion axon through the optic chiasm 431

#### Target Selection: "Are We There Yet?" 432

Chemotactic proteins 432

Target selection by retinal axons:

"Seeing is believing" 433

#### Synapse Formation 436

16

## Ectodermal Placodes and the Epidermis 441

### Cranial Placodes: The Senses of Our Heads 441

Cranial placode induction 443

Otic-epibranchial development: A shared experience 444

Morphogenesis of the vertebrate eye 448

Formation of the eye field: The beginnings of the retina 449

The lens-retina induction cascade 451

### The Epidermis and Its Cutaneous Appendages 453

Origin of the epidermis 453

The ectodermal appendages 454

Signaling pathways you can sink your teeth into 456

Ectodermal appendage stem cells 457

## PART V • Building with Mesoderm and Endoderm: Organogenesis

17

## Paraxial Mesoderm

### The Somites and Their Derivatives 461

#### Cell Types of the Somite 464

### Establishing the Paraxial Mesoderm and

#### Cell Fates along the Anterior-Posterior Axis 465

Specification of the paraxial mesoderm 465

Spatiotemporal collinearity of Hox genes determines identity along the trunk 467

### Somitogenesis 469

Axis elongation: A caudal progenitor zone and tissue-to-tissue forces 470

How a somite forms: The clock-wavefront model 473

Linking the clock-wavefront to Hox-mediated axial identity and the end of somitogenesis 478

## **Sclerotome Development 479**

Vertebrae formation 481

Tendon formation: The syndetome 484

## **Dermomyotome Development 485**

Determination of the central dermomyotome 486

Determination of the myotome 487

18

## **Intermediate and Lateral Plate Mesoderm**

Heart, Blood, and Kidneys 491

### **Intermediate Mesoderm: The Kidney 491**

#### **Specification of the Intermediate Mesoderm:**

**Pax2, Pax8, and Lim1 493**

#### **Reciprocal Interactions of Developing**

**Kidney Tissues 494**

Mechanisms of reciprocal induction 495

#### **Lateral Plate Mesoderm: Heart and**

**Circulatory System 499**

#### **Heart Development 501**

A minimalist heart 501

Formation of the heart fields 501

Specification of the cardiogenic mesoderm 503

Migration of the cardiac precursor cells 503

Initial heart cell differentiation 505

Looping of the heart 506

#### **Blood Vessel Formation 507**

Vasculogenesis: The initial formation of blood vessels 507

Angiogenesis: Sprouting of blood vessels and remodeling of vascular beds 510

#### **Hematopoiesis: Stem Cells and Long-Lived Progenitor Cells 510**

Sites of hematopoiesis 510

The bone marrow HSC niche 512

## **Coda 515**

19

## **Development of the Tetrapod Limb 517**

### **Limb Anatomy 517**

### **The Limb Bud 518**

### **Hox Gene Specification of Limb Skeleton Identity 519**

From proximal to distal: Hox genes in the limb 519

### **Determining What Kind of Limb to Form and Where to Put It 521**

Specifying the limb fields 522

Induction of the early limb bud 523

### **Outgrowth: Generating the Proximal-Distal Axis of the Limb 527**

The apical ectodermal ridge 527

Specifying the limb mesoderm: Determining the proximal-distal polarity 529

Turing's model: A reaction-diffusion mechanism of proximal-distal limb development 531

### **Specifying the Anterior-Posterior Axis 534**

Sonic hedgehog defines a zone of polarizing activity 534

Specifying digit identity by Sonic hedgehog 536

Sonic hedgehog and FGFs: Another positive feedback loop 537

Hox genes are part of the regulatory network specifying digit identity 538

### **Generating the Dorsal-Ventral Axis 539**

### **Cell Death and the Formation of Digits and Joints 541**

Sculpting the autopod 541

Forming the joints 542

### **Evolution by Altering Limb Signaling Centers 543**

20

## **The Endoderm Tubes and Organs for Digestion and Respiration 547**

### **The Pharynx 549**

### **The Digestive Tube and Its Derivatives 551**

Specification of the gut tissue 551

Accessory organs: The liver, pancreas, and gallbladder 554

### **The Respiratory Tube 557**

Epithelial-mesenchymal interactions and the biomechanics of branching in the lungs 558

## PART VI ● Postembryonic Development

21

### Metamorphosis

The Hormonal Reactivation of Development **563**

#### Amphibian Metamorphosis 564

- Morphological changes associated with amphibian metamorphosis 564
- Hormonal control of amphibian metamorphosis 566
- Regionally specific developmental programs 568

#### Metamorphosis in Insects 569

- Imaginal discs 570
- Hormonal control of insect metamorphosis 572
- The molecular biology of 20-hydroxyecdysone activity 574
- Determination of the wing imaginal discs 575

22

### Regeneration

The Development of Rebuilding **579**

#### Defining The Problem of Regeneration 579

Regeneration, a Recapitulation of Embryonic Development? 582

#### An Evolutionary Perspective on Regeneration 583

#### Regenerative Mechanics 586

#### Plant Regeneration 586

- A totipotent way of regenerating 586
- A plant's meri-aculous healing abilities 587

#### Whole Body Animal Regeneration 591

- Hydra: Stem cell-mediated regeneration, orphallaxis, and epimorphosis 591
- Stem cell-mediated regeneration in flatworms 594

#### Tissue-Restricted Animal Regeneration 602

- Salamanders: Epimorphic limb regeneration 602

Defining the cells of the regeneration blastema 604

Luring the mechanisms of regeneration from zebrafish organs 607

#### Regeneration in Mammals 613

- Compensatory regeneration in the mammalian liver 613
- The spiny mouse, at the tipping point between scar and regeneration 615

23

### Development in Health and Disease

Birth Defects, Endocrine Disruptors, and Cancer **619**

#### The Role of Chance 619

#### Genetic Errors of Human Development 620

- The developmental nature of human syndromes 620
- Genetic and phenotypic heterogeneity 621

#### Teratogenesis: Environmental Assaults on Animal Development 621

- Alcohol as a teratogen 623
- Retinoic acid as a teratogen 627

#### Endocrine Disruptors: The Embryonic Origins of Adult Disease 628

- Diethylstilbestrol (DES) 629
- Bisphenol A (BPA) 632
- Atrazine: Endocrine disruption through hormone synthesis 633
- Fracking: A potential new source of endocrine disruption 634

#### Transgenerational Inheritance of Developmental Disorders 634

#### Cancer as a Disease of Development 636

- Development-based therapies for cancer 640

#### Coda 641

## PART VII ● Development in Wider Contexts

## Experimental Biology

### Development and Evolution

Developmental Mechanisms of Evolutionary Change 643

#### The Developmental Genetic Model of Evolutionary Change 643

##### Preconditions for Evolution: The Developmental Structure of the Genome 643

Modularity: Divergence through dissociation 644

Molecular parsimony: Gene duplication and divergence 646

##### Mechanisms of Evolutionary Change 648

Heterotopy 649

Heterochrony 650

Heterometry 651

Heterotypy 653

##### Developmental Constraints on Evolution 654

Physical constraints 654

Morphogenetic constraints 654

Pleiotropic constraints and redundancy 655

#### Ecological Evolutionary Developmental Biology 656

##### Plasticity-First Evolution 656

Genetic assimilation in the laboratory 656

Genetic assimilation in natural environments 658

##### Selectable Epigenetic Variation 659

##### Evolution and Developmental Symbiosis 660

The evolution of multicellularity 661

The evolution of placental mammals 662

##### Coda 662

### Appendix A-1

### Glossary G-1

### Index I-1

# Brief Contents

## I **Patterns and Processes of Becoming: A Framework for Understanding Animal Development**

CHAPTER 1 ● **The Making of Body and a Field** Introduction to Developmental Biology 1

CHAPTER 2 ● **Specifying Identity** Mechanisms of Developmental Patterning 39

CHAPTER 3 ● **Differential Gene Expression** Mechanisms of Cell Differentiation 51

CHAPTER 4 ● **Cell-to-Cell Communication** Mechanisms of Morphogenesis 87
