Preface	ix
1 Introduction	1
1.1 Resources	1
1.2 A paradigm of population growth	7
1.3 Competition and resources	11
1.4 Classical competition theory	12
1.5 Concluding remarks	16
2 Theoretical and experimental foundations	17
2.1 Introduction	17
2.2 Chemostat models	18
2.3 Competition for a single abiotic resource	21
2.4 Competition for two abiotic resources	31
2.5 Concluding remarks	46
3 Experimental studies of resource competition	48
3.1 Introduction	48
3.2 General overview	50
3.3 Microorganisms	52
3.4 Higher plants	71
3.5 Metazoa	79
3.6 Concluding remarks	85
4 Critiques	89
4.1 Introduction	89
4.2 The logical structure of theory and experimentation	90
4.3 Critiques of resource competition theory	94
4.4 A look ahead	99
5 Nonequilibrium resource competition	100
5.1 General notions	101
5.2 Experimental and theoretical studies of plankton	106
5.3 Competition for biotic resources	119
5.4 Other approaches	124
5.5 Remaining issues	130

viii Contents

6	Competition within food webs	132
6.1	Introduction	132
6.2	A resource-dependent food web	134
6.3	Special cases of the resource-dependent food web	140
6.4	Remaining issues	169
6.5	Conclusions	170
7	Spatial heterogeneity	172
7.1	Introduction	172
7.2	General approaches	173
7.3	Island or site-based models	174
7.4	Continuum models	194
7.5	Stepping-stone models	201
7.6	Empirical and theoretical challenges	203
7.7	Conclusions	205
8	Competition for light	207
8.1	Introduction	207
8.2	The vertical nature of light supply, consumption and photosynthesis	208
8.3	Horizontal aspects of competition for light	228
8.4	Temporal aspects of competition for light	230
8.5	Conclusions and remaining issues	230
9	Resource competition and evolution	233
9.1	Introduction	233
9.2	Purely phenotypic approaches	234
9.3	Genetic approaches	241
9.4	Conclusions and remaining issues	252
10	Applications	254
10.1	Introduction	254
10.2	Water quality management	255
10.3	Medicine	262
10.4	Conservation	274
10.5	Conclusions and remaining issues	275
11	Conclusions	277
11.1	Introductory remarks	277
11.2	The current status of resource competition	279
11.3	Concluding remarks	282
	Appendix A Resource supply functions	283
	Appendix B Use of closed-system approximations	285
	Appendix C Classification of ecological strategies	290
	References	296
	Index	332
