Motto

Dušan Hrčkulák and Vladimír Kořínek	12
Intestinal organoid cultures – methodology for isolation, propagation, and freezing of mouse intestinal epithelium in vitro	
Felix Zimmann and David Stanek	20
Human stem cell derived disease models for retinitis pigmentosa	
Linda Berková	30
Transgenic murine models employed to study gastric epithelial stem cells	
Šarka Danačiková	40
The role of organotypic cultures in epilepsy research	
Zbyněk Kozmik	49
Eye organoids as a useful tool for studies of eye development and human ocular diseases	
Michaela Kreplová	57
Generation of three-dimensional retinal organoids from mouse embryonic stem cells	
Jana Klementová, Ivana Dobiášovská, Martina Zíková	64
Adult mammalian neural stem cells and neurogenesis	
Monika Šťastná, Lucie Janečková, Vladimír Kořínek	71
Mouse xenograft models of human colorectal cancer	
Jiří Hejnar	82
30 years with avian leukosis virus subgroup J. Can we get rid of it via biotechnology	
Filip Horvat, Petr Svoboda	92
Microarray-based transcriptomics of early mammalian development	
Trevor A. Epp, Björn Schuster, Kallayane Chawengsaksophak	106
Development of a novel gene mutagenesis and protein tagging strategy	
Šárka Jarošová and Martina Zíková	115
Molecular subgroups of medulloblastoma	
Shubhangini Kataruka, Petr Svoboda	122
Oocytes by the numbers	

Martin Čapek, Michaela Efenberková, Ivan Novotný, Ondrej Horváth	133
The wavelet-based denoising of images in Fiji/ImageJ, with example applications in structured illumination microscopy	
Zbyněk Kozmik	143
Conditional gene deletion in the mouse lens by Cre/loxP system	
Trevor A. Epp, Björn Schuster, Kallayanee Chawengsaksophak	153
Visualizing embryonic hematopoiesis in the mouse	
Zuzana Loubalová, Josef Pasulka, Petr Svoboda	159
Rodent models and their genomes	
Petr Svoboda	176
The Afterlife of Long Terminal Repeats	
Vladimír Pečenka, Petr Pajer, Vít Karafiát, Michal Dvořák	189
Exploring avian cancer genome with insertional mutagenesis screens using myeloblastosis associated viruses	
Jiří Plachý and Jiří Hejnar	207
Chicken – an old and versatile experimental model	
Björn Schuster, Trevor A. Epp, Kallayanee Chawengsaksophak	226
Efficient generation of transgenic animal models using in vivo electroporation	
Ivan Novotny, Michaela Efenberkova, Martin Capek and Ondrej Horvath	234
SUPER-RESOLUTION LIGHT MICROSCOPY: STED microscope fine laser co-alignment influences the final resolution and SNR	
Mina Obuca and David Staněk	241
Prp16/DHX38 helicase and its link to retinitis pigmentosa	
Filip Šenigl	248
The use of retroviral vectors for genome-wide mapping of the AID-induced somatic hypermutability	
David Staněk	262
Model organisms for retinitis pigmentosa	
Prasoon Kumar Thakur, David Staněk	271
A review of computational resources for the model organism	
Trevor A. Epp, Björn Schuster, Kallayanee Chawengsaksophak	285
Predicting new antiangiogenic targets using synexpression	
Ondřej Svoboda	296
Origins of vascular and hematopoietic system	
Zbyněk Kozmik	303
Medaka fish as a model in biomedical vision research
