Preface xi

Acknowledgements xiii

1 The History of Biogeography 1

Lessons from the Past 1

Ecological versus Historical Biogeography, and Plants versus Animals 3

Biogeography and Creation 4

The Distribution of Life Today 5

Evolution – a Flawed and Dangerous Idea! 7

Enter Darwin – and Wallace 8

World Maps: Biogeographical Regions of Plants and Animals 10

Getting around the World 12

The Origins of Modern Historical Biogeography 16

The Development of Ecological Biogeography 19

Living Together 20

Marine Biogeography 23

Island Biogeography 24

Biogeography Today 26

SECTION I: THE CHALLENGE OF EXISTING 31

2 Patterns of Distribution: Finding a Home 33

Limits of Distribution 37

The Niche 38

Overcoming the Barriers 39

Climatic Limits: The Palms	41
A Successful Family: The Daisies (Asteraceae)	42
Patterns among Plovers	46
Magnolias: Evolutionary Relicts	49
The Strange Case of the Testate Amoeba	50
Climatic Relicts	52
Topographical Limits and Endemism	59
Physical Limits	60
Species Interaction: A Case of the Blues	66
Competition	69
Reducing Competition	71
Predators and Prey, Parasites and Hosts	73
Migration	76
Invasion	79

3 Communities and Ecosystems: Living Together 89

The Community	89
The Ecosystem	92
Ecosystems and Species Diversity	95
Biotic Assemblages on a Global Scale	98
Mountain Biomes	103
Global Patterns of Climate	106
Climate Diagrams	109
Modelling Biomes and Climate	112

4 Patterns of Biodiversity 117

How Many Species are There?	118
Latitudinal Gradients of Diversity	123
Is Evolution Faster in the Tropics?	131
The Legacy of Glaciation	132
Latitude and Species Ranges	133
Diversity and Altitude	134
Biodiversity Hotspots	136
Diversity in Space and Time	139
Intermediate Disturbance Hypothesis	141
Dynamic Biodiversity and Neutral Theory	142

SECTION II: THE ENGINES OF THE PLANET 147

5 Plate Tectonics 149

- The Evidence for Plate Tectonics 149
- Changing Patterns of Continents 154
- How Plate Tectonics affects the Living World, Part I:
Events on Land 154
- How Plate Tectonics affects the Living World, Part II:
Events in the Oceans 156
- Islands and Plate Tectonics 162
- Terranes 164

6 Evolution, the Source of Novelty 169

- The Mechanism of Evolution: The Genetic System 172
- From Populations to Species 173
- Sympatry versus Allopatry 176
- Defining the Species 179
- A Case Study: Darwin's Finches 180
- Controversies and Evolution 183
- Charting the Course of Evolution 188

SECTION III: ISLAND BIOGEOGRAPHY 193

7 Life, Death and Evolution on Islands 195

- Types of Island 196
- Getting There: The Challenges of Arriving 196
- Dying There: Problems of Survival 197
- Adapting and Evolving 199
- The Hawaiian Islands 201
- Integrating the Data: The Theory of Island Biogeography 208
- Modifying the Theory 212
- The General Dynamic Model for Oceanic
Island Biogeography 214
- Nestedness 216
- Living Together: Incidence and Assembly Rules 216
- Building an Ecosystem: The History of Rakata 218

SECTION IV: PATTERNS OF LIFE 229

8 From Evolution to Patterns of Life 231

- Dispersal, Vicariance and Endemism 231
- Methods of Analysis 232
- Event-Based Biogeography 236
- Reticulate Patterns 239
- The Molecular Approach to Historical Biogeography 245
- Molecules and the More Distant Past 250

9 Patterns in the Oceans 255

- Zones in the Ocean and on the Seafloor 257
- Basic Biogeography of the Seas 260
- The Open-Sea Environment 261
- The Ocean Floor 268
- The Shallow-Sea Environment 273

10 Patterns in the Past 291

- Early Land Life on the Moving Continents 292
- One World – for a While 295
- Biogeography of the Earliest Mammals 298
- Early History of the Flowering Plants 303
- Reconstructing Early Biomes 305

11 Setting the Scene for Today 315

- The Biogeographical Regions Today 315
- The Basis of Mammal Biogeography 317
- Patterns of Distribution Today, I: The Mammals 319
- Patterns of Distribution Today, II: The Flowering Plants 322
- History of Today's Biogeographical Regions 323
- The Old World Tropics: Africa, India and South-East Asia 324
- Australia 331
- New Caledonia 334
- New Zealand 335
- The West Indies 336
- South America 341

The Northern Hemisphere: Holarctic Mammals and
Boreal Plants 346

12 Ice and Change 353

Climatic Wiggles 354
Interglacials and Interstadials 356
Biological Changes in the Pleistocene 358
The Last Glacial 361
Causes of Glaciation 370
The Current Interglacial: A False Start 375
Forests on the Move 377
The Dry Lands 381
Changing Sea Levels 383
A Time of Warmth 384
Climatic Cooling 386
Recorded History 388
Atmosphere and Oceans: Short-Term Climate Change 388
The Future 390

SECTION V: PEOPLE AND PROBLEMS 397

13 The Human Intrusion 399

The Emergence of Humans 399
Modern Humans and the Megafaunal Extinctions 406
Plant Domestication and Agriculture 409
Animal Domestication 414
Diversification of *Homo sapiens* 415
The Biogeography of Human Parasitic Diseases 417
Environmental Impact of Early Human Cultures 420

14 Conservation Biogeography 425

Welcome to the Anthropocene 425
Less, and Less Interesting 429
What is behind the Biodiversity Crisis? 430
Crisis Management: Responding to Biodiversity Loss 435
The Birth of Conservation Biogeography 437
The Scope of Conservation Biogeography 438

Conservation Biogeography in Action	443
The Future is Digital	446
Conclusions	449

Glossary	455
----------	-----

Index	469
-------	-----

Colour plates between pages 146 and 147	
---	--

Entry numbers in **bold type** in the index indicate the pages on which the concept involved is defined. These words or concepts are shown in bold type on the page in question, and also appear in the Glossary if the concept is used in a variety of pages.
