

CONTENTS

Foreword	ix
Preface	xi
A BASIC CONCEPTS OF HOST-GUEST COMPLEXATION WITH EXAMPLES FROM IONOPHORE CHEMISTRY	1
A1. General principles of molecular recognition, complex formation and host design	1
A1.1. Thermodynamics of multi-site host-guest complexation	2
A1.2. Macrocycles, clefts, and open chain host structures	11
A2. Ionophores for cations: chelate, macrocyclic and cryptate effects	11
A3. Complexation selectivity, the hole-size concept and its limitations	17
A4. Enthalpy and entropy contributions and compensations; heat capacity changes	22
A5. Preorganization	25
A6. Ionophores for anions	35
A7. Macrocycles with secondary binding sites	42
A7.1. Lariat ethers	43
A7.2. Ditopic receptors	45
A7.3. Co-complexation	46
A8. Second-sphere coordination	47
A9. Conformational coupling between binding sites: cooperativity, allosteric effects and induced fit	50
A10. Exercises and answers	58
References	62
B NON-COVALENT INTERACTIONS AND ORGANIC HOST-GUEST COMPLEXES	69
B1. Quantification of non-covalent forces	69
B2. Ion pairs	70
B3. Hydrogen bonds	79
B4. Cation- π -electron and related interactions	89
B5. Van der Waals interactions, dispersive forces, stacking, charge transfer complexes and related interactions	95
B5.1. C-H- π and related interactions	95
B5.2. Stacking or face-to-face complexes	96
B5.3. Charge transfer complexes	101

vi *Contents*

B6. Hydrophobic (lipophilic) interactions	102
B7. Exercises and answers	110
References	113
 C MEDIUM EFFECTS	 119
C1. General considerations	119
C2. Solvent effects	120
C3. Salt effects	128
C4. Exercises and answers	133
References	134
 D ENERGETICS OF SUPRAMOLECULAR COMPLEXES: EXPERIMENTAL METHODS	 137
D1. Study of chemical equilibria	137
D1.1. General and practical considerations with 1:1 equilibria	137
D1.1.1. Direct determinations with slowly equilibrating complexes	138
D1.1.2. Spectrometric and other titrations	138
D1.2. Self-association	146
D1.2.1. Preliminary checks	146
D1.2.2. Measuring self-association constants	147
D1.3. Complexes with stoichiometries other than 1:1	148
D1.3.1. Methods for stoichiometry determination	148
D1.3.2. Titration curves for stoichiometries higher than 1:1	150
D1.4. Computer programs for equilibrium constant calculation	155
D2. Electrochemical methods	156
D2.1. Potentiometry	156
D2.1.1. Potentiometric titration with a glass electrode	157
D2.1.2. Potentiometry with ion-selective electrodes	162
D2.1.3. Potentiometry with metal-metal ion electrodes	163
D2.2. Macroscopic and microscopic protonation constants and acid-base behavior of macrocycles	164
D2.3. Polarography and cyclic voltammetry	171
D2.4. Conductometry	175
D3. Spectroscopic methods	177
D3.1. UV-visible and infrared spectroscopy	177
D3.2. Fluorescence spectroscopy	181
D3.3. Chiroptical methods	184
D3.4. Nuclear magnetic resonance	186
D3.4.1. NMR shift titrations and experimental considerations	186
D3.4.2. Evaluation of association constants and complexation-induced shifts (CIS)	188
D3.4.3. Affinities from NMR relaxation measurements	189
D3.5. Mass spectrometry	190
D3.5.1. Mass spectrometry study of solution equilibria	190
D3.5.2. Mass spectrometry study of gas phase equilibria	196
D4. Solubility and separation-based methods	197

D4.1. Solubility changes	198
D4.2. Extraction	200
D4.3. Chromatography and electrophoresis	202
D5. Calorimetry	205
D6. Kinetic methods	208
D7. Direct measurements of affinities and surface plasmon resonance	211
D8. Miscellaneous techniques and comparison of methods	212
D9. Exercises and answers	217
References	221
E STRUCTURAL METHODS	227
E1. Indirect approaches (competition experiments, structure–activity correlations)	227
E2. Diffraction techniques	228
E3. Supermicroscopy (STM, AFM, CFM, SNOM)	230
E4. NMR methods	231
E4.1. NMR shielding (CIS values) for the evaluation of complex structure	231
E4.2. NOE measurements for conformational analysis of supramolecular complexes	236
E4.3. Solid state NMR-spectroscopy	241
E5. Chiroptical methods for structure elucidation	241
E6. Vibrational spectroscopy	244
E7. Computer aided molecular modeling	248
E7.1. Recognition between molecular surfaces	251
E7.2. Applications to supramolecular complexes	252
E8. Exercises and answers	255
References	255
F DYNAMICS OF SUPRAMOLECULAR SYSTEMS	259
F1. NMR methods	260
F2. Fluorescence methods	263
F3. Other techniques	264
References	265
G SURFACTANT-BASED SUPRAMOLECULAR SYSTEMS AND DENDRIMERS	267
G1. Monolayers	267
G2. Micelles and bilayers	270
G3. Dendrimers	275
References	277
H SHAPE RECOGNITION AND SOLID STATE INCLUSION COMPLEXES	279
H1. Carcerands and cavitands	279
H2. Clathrates and solid state inclusion complexes	280
H3. Molecular imprinting	282
References	284

I	SELECTED APPLICATIONS	287
I1.	Chiral discrimination	287
I2.	Self-organization processes and applications	291
I2.1.	Template association and supramolecular synthesis	291
I2.2.	New materials and biomolecules	291
I2.3.	Self-replication and autocatalysis	298
I3.	Supramolecular catalysis	301
I3.1.	Host–guest systems	301
I3.2.	Micellar catalysis	312
I4.	Analytical applications	317
I4.1.	Optical devices	319
I4.2.	Electrochemical devices	321
I5.	Molecular switches and supramolecular photochemistry	324
I6.	Membrane transport	329
I7.	Exercises and answers	333
	References	335
	APPENDICES	341
	INDEX	347
