THEORY

1. Physical Basis of Intermolecular Interactions

ANTHONY J. STONE

1.1	Introduction	3
1.1.1	Pairwise Additivity	3
1.1.2	Perturbation Theory	4
1.1.3	Classification of Interactions	7
1.2	Electrostatic Interactions	8
1.3	Exchange Repulsion	12
1.4	Induction	14
1.4.1	Charge Transfer Energy	17
1.5	Dispersion	18
1.5.1	Many-Body Dispersion	21
1.6	Examples	21
1.6.1	Inert Gas Dimers	22
1.6.2	Hydrogen Bonds	22
1.6.3	Halogen Bonds	23
1.6.4	Energy Landscapes	23
1.7	Summary	24
	References	25

2. Energy Partition Analyses: Symmetry-Adapted Perturbation Theory and Other Techniques

E. FRANCISCO AND A. MARTÍN PENDÁS

2.1	Introduction	27
2.2	The Long-Range Limit and Perturbation Theory	29

2.2.1	Rayleigh–Schrödinger Perturbation Theory	29
2.2.2	The Polarization Approximation	31
2.3	Symmetry Adapted PTs: Basic Formalism and Flavors	33
2.4	Supermolecular EDAs	40
2.4.1	Orbital Based Partitions	42
2.4.2	Real-Space Partitions	45
2.5	Physical and Chemical Insight: Comparison of Energetic Terms	48
2.5.1	A Toy Example: The Dissociative Heitler–London Triplet of H ₂ Molecule	48
2.5.2	The Coulombic or Electrostatic Interaction	51
2.5.3	Exchange and Antisymmetry	56
2.5.4	Polarization and Charge Transfer	58
2.5.5	Dispersion	60
2.6	Overview and Conclusions	61
	Acknowledgments	62
	References	62

3. Intermolecular Interaction Energies from Kohn–Sham Random Phase Approximation Correlation Methods

ANDREAS HESSELMANN

3.1	Intermolecular Interactions and the Electron Correlation Problem	65
3.2	The Revival of the RPA as a Ground-State Electron Correlation Method	72
3.3	Derivation of the RPA	77
3.4	Beyond Direct RPA	80
3.4.1	RPA Methods Including Exchange Interactions	80
3.4.2	RPA Methods Including Additional Many-Body Contributions	82

3.4.3 Range-Separated RPA Methods	84	4.2.5 Explicitly Correlated Methods	151
3.4.4 ACFDT Methods with Additional Kernel Correlation Terms	87	4.3 Coupled-Cluster Approaches for Larger Systems	153
3.4.5 Particle-Particle RPA	90	4.3.1 Local Correlation Methods	154
3.4.6 Orbital Optimized RPA	91	4.3.2 The Many-Body Expansion	156
3.5 Interaction Energy Benchmarks	92	4.4 Evaluating Approximate Methods	158
3.5.1 S22 Benchmark	92	4.4.1 Databases of Benchmark Interaction Energies	158
3.5.2 S66 $\times$ 8 Benchmark	100	4.4.2 Methods Based on Møller-Plesset Perturbation Theory	159
3.5.3 IDISP Benchmark	105	4.4.3 Methods Based on Coupled-Cluster Theory	161
3.6 RPA in Intermolecular Perturbation Theory	108	4.4.4 Comparison to Density-Functional Theory and Symmetry-Adapted Perturbation Theory	163
3.6.1 Molecular Properties	109	Acknowledgments	164
3.6.2 Symmetry-Adapted Perturbation Theory	115	References	164
3.7 σ -Stacking Versus π -Stacking Interactions	119		
3.8 Interaction Energies for Large Organic Complexes	123		
3.8.1 S12L Benchmark Database: Introduction	123		
3.8.2 Basis Set Extrapolation Scheme for Large Systems	124		
3.8.3 S12L Benchmark Database: Binding Energies	126		
3.9 Summary	129		
List of Acronyms	130		
Acknowledgments	131		
References	131		
4. Wavefunction Theory Approaches to Noncovalent Interactions		5. The Exchange-Hole Dipole Moment Dispersion Model	
C. DAVID SHERRILL		ERIN R. JOHNSON	
4.1 The Challenges of Modeling Noncovalent Interactions	137	5.1 The Perturbation Theory of Dispersion	169
4.1.1 The Electron Correlation Challenge	137	5.1.1 The London and Salem Models	169
4.1.2 The Basis Set Challenge	140	5.1.2 The Exchange-Hole Dipole Moment Model	171
4.2 Definitive Results Using Coupled-Cluster Theory	143	5.1.3 Comparison of Atomic Dispersion Coefficients	173
4.2.1 The Reliability of Coupled-Cluster with Perturbative Triples, CCSD(T)	143	5.1.4 Exact Versus Density-Functional Hole Models	174
4.2.2 Basis Set Extrapolation	144	5.1.5 The dDsC Exchange-Hole Model	176
4.2.3 Focal-Point Analysis	145	5.2 The XDM Dispersion Energy	177
4.2.4 Density Fitting, Cholesky Decomposition, and Frozen Natural Orbitals	147	5.2.1 Higher-Order Dispersion Coefficients	177
		5.2.2 Decomposition into Atomic Contributions	180
		5.2.3 Dependence on the Chemical Environment	182
		5.2.4 The Damping Function	183
		5.3 The Role of the Base Functional	186
		5.4 The Solid State: XDM for Periodic Systems	189
		5.5 Conclusions	192
		Acknowledgments	192
		References	192

6. A Comprehensive Overview of the DFT-D3 London-Dispersion Correction

LARS GOERIGK

- 6.1 Introduction 195
- 6.2 Theoretical Background 196
 - 6.2.1 The DFT-D2 Correction 196
 - 6.2.2 The DFT-D3 Correction 198
 - 6.2.3 Combining DFT-D3 with Quantum-Chemical Approaches 206
 - 6.2.4 Three-Body Effects in DFT-D3 209
 - 6.2.5 DFT-D3 for Periodic Systems 210
- 6.3 Availability of DFT-D3 210
- 6.4 Discussion and Examples 211
 - 6.4.1 On the Accuracy of DFT-D3 Dispersion Coefficients 211
 - 6.4.2 Typical Noncovalent Interactions 212
 - 6.4.3 Intramolecular Dispersion Effects in Thermochemistry and Kinetics 213
 - 6.4.4 DFT-D3 and Geometries 213
 - 6.4.5 DFT-D3 for Bulk Solids and Surfaces 214
 - 6.4.6 Modified DFT-D3 Dispersion Coefficients in the Literature 215
- 6.5 Summary 216
- Acknowledgments 216
- References 216

7. Atom-Centered Potentials for Noncovalent Interactions and Other Applications

GINO A. DILABIO

- 7.1 Introduction 221
- 7.2 A Brief Theoretical Background on Effective Core Potentials 223
- 7.3 Beyond Potentials Representing Core Electrons: ACPs for Application in QMMM Calculations 224
- 7.4 ACPs for Improving DFT in Noncovalently Interacting Systems 227
- 7.5 ACPs for Improved Descriptions of Covalent Bonds and Noncovalent Interactions 235
- 7.6 ACPs for Basis Set Incompleteness 237
- 7.7 Summary and Outlook 238

References 239

8. The vdW-DF Family of Nonlocal Exchange-Correlation Functionals

ELSEBETH SCHRÖDER, VALENTINO R. COOPER,
KRISTIAN BERLAND, BENGT I. LUNDQVIST,
PER HYLDGAARD, AND TIMO THONHAUSER

- 8.1 Why a Nonlocal Correlation Density Functional? 241
- 8.2 Exchange and Correlation in DFT 243
- 8.3 Learning from the Asymptotic Limit 246
- 8.4 Derivation of vdW-DF 249
 - 8.4.1 The Coupling Constant Integration 250
 - 8.4.2 The Universal-Kernel Evaluation 253
 - 8.4.3 Further Developments: Self-Consistency and Spin 256
 - 8.4.4 Related Approaches: Vydrov-Van Voorhis Functionals 258
- 8.5 Importance of Being Electron Focused 259
- 8.6 Overview of Nonlocal Functional Releases and Variants 262
 - 8.6.1 vdW-DF1 264
 - 8.6.2 vdW-DF2 265
 - 8.6.3 Exchange Functionals 266
 - 8.6.4 VV Family and Variants 268
- 8.7 Current Status and Future Developments 269
- Acknowledgments 270
- References 271

II

APPLICATIONS

9. Noncovalent Interactions in Organic Electronic Materials

MAHESH KUMAR RAVVA, CHAD RISKÓ, AND
JEAN-LUC BRÉDAS

- 9.1 Introduction 277
- 9.2 Materials Design Motifs 280
 - 9.2.1 Charge-Carrier Transport in Organic Semiconductors: Dependence on the Intermolecular Electronic Coupling 280

- 9.2.2 Heteroatoms Within the π -Conjugated Backbone 281
- 9.2.3 Halogen Substituents on the π -Conjugated Backbone Periphery 281
- 9.2.4 The Role of Alkyl Chains: From Solubility to Steric Bulk 282
- 9.3 Noncovalent Interactions in Molecular Materials 284
 - 9.3.1 The Oligoacene Series 284
 - 9.3.2 Rubrene: Solid-State Structure Determined by a Balance of Intramolecular and Intermolecular Noncovalent Interactions 288
 - 9.3.3 Azapentacenes and Benzodithiophene as Model Systems to Investigate the Impacts of Heteroatom Substitution 289
 - 9.3.4 Noncovalent Interactions in Fullerenes and Polymer:Fullerene Blends: Implications for Processing and Solar Cells 292
- 9.4 Synopsis 297
 - Acknowledgments 297
 - References 298

10. Noncovalent Interactions in Molecular Crystals

GREGORY J.O. BERAN, YONATON N. HEIT, AND
JOSHUA D. HARTMAN

- 10.1 Introduction 303
- 10.2 Techniques for Modeling Molecular Crystals 304
 - 10.2.1 Periodic DFT 304
 - 10.2.2 Periodic MP2 307
 - 10.2.3 Fragment Methods 307
- 10.3 Representative Applications 311
 - 10.3.1 Finite-Temperature Effects 311
 - 10.3.2 Molecular Crystal Phase Diagrams 314
 - 10.3.3 Vibrational Spectroscopy 316
 - 10.3.4 NMR Spectroscopy 318
- 10.4 Summary 325
 - Acknowledgments 325
 - References 325

11. Molecular Crystal Structure Prediction

SARAH L. PRICE AND JAN GERIT BRANDENBURG

- 11.1 Why Predict Organic Crystal Structures? 333
- 11.2 Background on Crystal Structure Prediction 334
 - 11.2.1 General Algorithm 336
 - 11.2.2 Discussion of the Common Assumptions Needed in CSP Algorithms 336
 - 11.2.3 Example of CSP in Practice 344
- 11.3 Blind Test of Crystal Structure Prediction 347
 - 11.3.1 Evolution of CSP Methods 348
 - 11.3.2 State-of-the-Art CSP as a Test of Modeling Noncovalent Interactions 349
- 11.4 CSP as an Aid in Pharmaceutical Development 353
 - 11.4.1 The Diversity of the Crystal Energy Landscape 353
 - 11.4.2 Finding the Most Stable Polymorph 355
 - 11.4.3 Characterizing Polymorph Structure, Disorder, and Polymorphic Purity 355
 - 11.4.4 Suggesting Experiments to Find Predicted Polymorphs 357
- 11.5 Chiral Separation by Crystallization 358
- 11.6 Conclusions and Future Challenges 360
 - Acknowledgments 361
 - References 361

12. Noncovalent Interactions and Environment Effects

BENEDETTA MENNUCCI

- 12.1 Introduction 365
- 12.2 The Effective Hamiltonian 366
- 12.3 Polarizable Embeddings 369
 - 12.3.1 Continuum Embeddings: The Apparent Surface Charge Formulation 370
 - 12.3.2 Atomistic Embeddings: The Induced Dipole Formulation 372
- 12.4 Beyond the SCF Energy 373
 - 12.4.1 Ground State Properties of Embedded Systems 374

12.4.2 Electronic Transitions in Embedded Systems 378

- 12.5 Outlook 383
References 384

13. Surface Adsorption

JEFFREY R. REIMERS, MUSEN LI, DONGYA WAN,
TIM GOULD, AND MICHAEL J. FORD

- 13.1 Introduction 387
13.2 Dobson's Classification Scheme for Dispersion Energy Components and Their Application to Asymptotic Scaling Laws for Some Paradigmatic Situations 389
13.3 Contributions to the Dispersion Interaction Included in Modern Computational Methods 391
13.4 Benzene on Cu, Ag, and Au Surfaces 395
13.5 Strong van der Waals Forces: 1,10-Phenanthroline Monolayers on Au(111) 400
13.6 The Dispersive Nature of the Au-S Bond to Surfaces and Nanoparticles 401
13.7 Dispersion and Free Energy Calculations of SAM Formation and Polymorphism from Solution 404
13.8 Computational Efficiency 407
13.9 Conclusions 409
Symbols 411
Acknowledgments 411
References 411

14. Noncovalent Interactions in Nanotechnology

VALENTINO R. COOPER, CHRISTOPHER N. LAM,
YANGYANG WANG, AND BOBBY G. SUMPTER

- 14.1 Introduction 417
14.2 Relevant Noncovalent Interactions 419
14.2.1 Hydrogen Bonding 421
14.2.2 Hydrophobic Interactions 424
14.2.3 π - π Interactions 425
14.2.4 Electrostatic Interactions 427
14.3 Growth 428
14.3.1 Top-Down Approaches 428
14.3.2 Bottom-Up Approaches 429
14.3.3 Alternative Approaches 429
14.4 Layered Materials 430
14.4.1 Graphene: A Prototype 430
14.4.2 Beyond Graphene 432
14.5 Noncovalent Interactions in Nanoporous Materials 434
14.5.1 Porosity 435
14.5.2 Adsorption in Nanopores 436
14.6 Noncovalent Interactions in Soft Matter 439
14.6.1 Challenges in Polymer Physics Underpinned by Noncovalent Interactions 440
14.7 Conclusion and Outlook 443
Acknowledgments 444
References 444

Subject Index 453
