

Preface .....	III
---------------	-----

<b>What was the Question? .....</b>	<b>1</b>
-------------------------------------	----------

Lisser Rye Ejersbo

1. Introduction .....	1
2. Background .....	4
3. Benefits of the course .....	5
4. What happens in the classroom? .....	6
5. Reflection and analysis .....	9
6. In-service training .....	11
7. Conclusion and further questions .....	15
8. Acknowledgements .....	16
9. References .....	16

<b>Analyzing math student teachers' sensitivity for aspects of the complexity of problem oriented mathematics instruction .....</b>	<b>19</b>
---	-----------

Torsten Fritzlar

1. Introduction .....	19
2. The <i>Faltproblem</i> (folding paper problem) .....	21
3. Generalizing considerations .....	25
4. A study of student teachers' degree of sensitivity for complexity .....	27
5. References .....	34

<b>Ordering Quadrangles and Analogizing Quadrangles and Triangles to Polyhedrons .....</b>	<b>37</b>
--	-----------

A Problem Field with Different Aspects

Günter Graumann

1. Figures in the plane – triangles and quadrangles .....	37
2. Analogies in space to the plane figures of the "sub-house of parallelograms" .....	41
3. Analogies in space to symmetrical quadrangles .....	46
4. Analogies in space to plane figures of the house of triangles .....	47
5. Final remark .....	49
6. References .....	49

<b>From plane curves to space surfaces: First results from a problem solving approach in a computer based environment .....</b>	<b>51</b>
---	-----------

Nikos Klaoudatos

1. Introduction .....	51
2. The project .....	53
3. Visualization, visual thinking and semiotic mediation .....	56
4. First results of the research .....	59
4.1 What is the representation of the equation $x+y=12$ in space? .....	60
4.2 In which way can we construct a surface from the contours? .....	62
4.3 Was the representation of $x+y=12$ necessary? .....	63
4.4 The computer as semiotic mediator: The work of the undergraduate student .....	64
5. Discussion and future work .....	66
6. References .....	69

<b>Development of Problem Solving at Comprehensive Schools .....</b>	<b>71</b>
Henry Leppäaho	
1. Introduction .....	72
1.1 Problem solving.....	72
1.2 Problem solving model.....	72
1.3 Problem solving strategy .....	73
1.4 Problem solving skills.....	73
1.5 Mathematical behavior.....	74
2. Aims of the research .....	75
2.1 Can we plan a problem solving course which improves pupils' problem solving skills? .....	75
2.2 Can we develop the problem solving skill by teaching focused on techniques that help especially to understand the problem and the solution?.....	75
2.3 Can we change pupils' attitudes towards difficult problems by teaching so that they experience problems as meaningful challenges, not as distressing tasks? .....	76
3. Some ideas and principles of the course .....	76
4. Research plan .....	78
5. Research problems .....	79
6. A solving map.....	80
7. What kind of problems would be good? .....	84
8. References.....	85

<b>Application of Sequenced Problems in the Teaching of Problem Solving .....</b>	<b>87</b>
Pál Maus	

<b>State-of-the-Art in Problem Solving: Focus on Open Problems .....</b>	<b>93</b>
Erkki Pehkonen	
1. State-of-the-art in problem solving.....	93
1.1 Problem solving in the 1980s.....	95
1.2 Open Problem Solving in the 1990s .....	97
2. The main concepts in open problems .....	100
2.1 Open problems.....	100
2.2 Investigations.....	103
3. References.....	104

<b>Beyond PISA - Analyzing and evaluating thought processes with the support of computers .....</b>	<b>113</b>
Hartmut Rehlich	
1. Introduction .....	114
2. Effects of resonance and dissonance .....	116
3. Some elements for modeling differences in cognitive structures.....	119
4. Simulation of "investigative processes of communication" .....	122
5. Concluding remarks .....	130
6. References.....	130
<b>Register .....</b>	<b>133</b>
