<i>Acknowledgments</i>	6
1. Introduction	8
The list of author's publications	10
2. Global Context	13
2.1 A review of nest boxes as a research tool	13
2.2 Advantage of indirect animal observation	15
2.3 The under-appreciated potential of the use of electronics	16
2.4 An example of a purpose-designed system for automated data collection	18
2.4.1 Stand-alone Smart Nest Box	19
2.4.2 Internet-connected Smart Nest Box	19
2.4.3 Smart Nest Box construction and installation	20
2.4.4 Extraction of information	21
2.5 Conclusion	34
3. Using Automated Data Collection for Behavioural Ecology Research	35
<i>Case study</i>	
Does the small male hypothesis apply to Boreal Owls?	
3.1 A review of Boreal Owl ecology	36
3.1.1 Distribution and habitat used	36
3.1.2 Nest box occupancy and the use of automated monitoring	37
3.1.3 Geographic trends in trophic characteristics of birds of prey	37
3.1.4 Response of the opportunistic Boreal Owl to changing food supply	39
3.1.5 Reproductive patterns under various environmental conditions	42
3.2 Testing of the small male hypothesis	44
3.2.1 Introduction of the small male hypothesis	44
3.2.2 Methods	46
3.2.3 Results	51
3.2.4 Assessing support for the small male hypothesis	71
3.3 Conclusion	76
4. Using Automated Data Collection for Environmental Education	77
<i>Case study</i>	
Birds Online project	
4.1 What is Citizen Science?	78
4.1.1 Public engagement	80
4.1.2 Motivation of participants	81
4.1.3 Scientific benefits	82
4.1.4 Educational benefits	83
4.1.5 Challenges for the future	83
4.2 The Birds Online project	84
4.2.1 SNBox deployment	88
4.2.2 SNBox occupancy	88
4.2.3 SNBox data acquisition	89
4.2.4 Educational benefits	90
4.3 Conclusion	105
5. General Outcomes	106
