

Table of Contents

1 Introduction and terminology	17
1.1 Spatial analysis, GIS and software tools	20
1.2 Intended audience and scope	25
1.3 Software tools and Companion Materials	25
1.3.1 GIS and related software tools	26
1.3.2 Suggested reading	28
1.4 Terminology and Abbreviations	30
1.4.1 Definitions	30
1.5 Common Measures and Notation	38
1.5.1 Notation	38
1.5.2 Statistical measures and related formulas	40
2 Conceptual Frameworks for Spatial Analysis	53
2.1 Basic Primitives	55
2.1.1 Place	55
2.1.2 Attributes	56
2.1.3 Objects	59
2.1.4 Maps	60
2.1.5 Multiple properties of places	61
2.1.6 Fields	62
2.1.7 Networks	63
2.1.8 Density estimation	63
2.1.9 Detail, resolution, and scale	64
2.1.10 Topology	65
2.2 Spatial Relationships	66
2.2.1 Co-location	66
2.2.2 Distance, direction and spatial weights matrices	66
2.2.3 Multidimensional scaling	68
2.2.4 Spatial context	68
2.2.5 Neighborhood	69
2.2.6 Spatial heterogeneity	69

2.2.7	Spatial dependence	70
2.2.8	Spatial sampling	70
2.2.9	Spatial interpolation	71
2.2.10	Smoothing and sharpening	72
2.2.11	First- and second-order processes	72
2.3	Spatial Statistics	73
2.3.1	Spatial probability	73
2.3.2	Probability density	74
2.3.3	Uncertainty	74
2.3.4	Statistical inference	74
2.4	Spatial Data Infrastructure	76
2.4.1	Geoportals	76
2.4.2	Metadata	77
2.4.3	Interoperability	77
2.4.4	Conclusion	77
3	Methodological Context	79
3.1	Analytical methodologies	81
3.2	Spatial analysis as a process	85
3.3	Spatial analysis and the PPDAC model	86
3.3.1	Problem: Framing the question	88
3.3.2	Plan: Formulating the approach	90
3.3.3	Data: Data acquisition	91
3.3.4	Analysis: Analytical methods and tools	93
3.3.5	Conclusions: Delivering the results	94
3.4	Geospatial analysis and model building	95
3.5	The changing context of GIScience	100
4	Building Blocks of Spatial Analysis	103
4.1	Spatial and Spatio-temporal Data Models and Methods	105
4.2	Geometric and Related Operations	110
4.2.1	Length and area for vector data	110
4.2.2	Length and area for raster datasets	113
4.2.3	Surface area	114

4.2.4	Line Smoothing and point-weeding	119
4.2.5	Centroids and centers	121
4.2.6	Point (object) in polygon (PIP)	128
4.2.7	Polygon decomposition	129
4.2.8	Shape	130
4.2.9	Overlay and combination operations	132
4.2.10	Areal interpolation	136
4.2.11	Districting and re-districting	138
4.2.12	Classification and clustering	143
4.2.13	Boundaries and zone membership	158
4.2.14	Tessellations and triangulations	166
4.3	Queries, Computations and Density	171
4.3.1	Spatial selection and spatial queries	171
4.3.2	Simple calculations	172
4.3.3	Ratios, indices, normalization, standardization and rate smoothing	175
4.3.4	Density, kernels and occupancy	179
4.4	Distance Operations	194
4.4.1	Metrics	196
4.4.2	Cost distance	201
4.4.3	Distance Transforms	208
4.4.4	Network distance	216
4.4.5	Buffering	217
4.4.6	Distance decay models	220
4.5	Directional Operations	224
4.5.1	Directional analysis of linear datasets	225
4.5.2	Directional analysis of point datasets	230
4.5.3	Directional analysis of surfaces	232
4.6	Grid Operations and Map Algebra	234
4.6.1	Operations on single and multiple grids	234
4.6.2	Linear spatial filtering	235
4.6.3	Non-linear spatial filtering	238
4.6.4	Erosion and dilation	239

5 Data Exploration and Spatial Statistics **243**

5.1 Statistical Methods and Spatial Data **245**

5.1.1	Descriptive statistics	248
5.1.2	Spatial sampling	248
5.2	Exploratory Spatial Data Analysis	255
5.2.1	EDA, ESDA and ESTDA	255
5.2.2	Outlier detection	258
5.2.3	Cross tabulations and conditional choropleth plots	261
5.2.4	ESDA and mapped point data	264
5.2.5	Trend analysis of continuous data	265
5.2.6	Cluster hunting and scan statistics	265
5.3	Grid-based Statistics and Metrics	267
5.3.1	Overview of grid-based statistics	267
5.3.2	Crosstabulated grid data, the Kappa Index and Cramer's V statistic	268
5.3.3	Quadrat analysis of grid datasets	271
5.3.4	Landscape Metrics	273
5.4	Point Sets and Distance Statistics	279
5.4.1	Basic distance-derived statistics	280
5.4.2	Nearest neighbor methods	280
5.4.3	Pairwise distances	284
5.4.4	Hot spot and cluster analysis	289
5.4.5	Proximity matrix comparisons	294
5.5	Spatial Autocorrelation	295
5.5.1	Autocorrelation, time series and spatial analysis	295
5.5.2	Global spatial autocorrelation	298
5.5.3	Local indicators of spatial association (LISA)	312
5.5.4	Significance tests for autocorrelation indices	315
5.6	Spatial Regression	317
5.6.1	Regression overview	317
5.6.2	Simple regression and trend surface modeling	322
5.6.3	Geographically Weighted Regression (GWR)	325
5.6.4	Spatial autoregressive and Bayesian modeling	329
5.6.5	Spatial filtering models	337
6	Surface and Field Analysis	339
6.1	Modeling Surfaces	341
6.1.1	Test datasets	341

6.1.2	Surfaces and fields	342
6.1.3	Raster models	344
6.1.4	Vector models	347
6.1.5	Mathematical models	348
6.1.6	Statistical and fractal models	349
6.2	Surface Geometry	351
6.2.1	Gradient, slope and aspect	351
6.2.2	Profiles and curvature	357
6.2.3	Directional derivatives	362
6.2.4	Paths on surfaces	362
6.2.5	Surface smoothing	364
6.2.6	Pit filling	365
6.2.7	Volumetric analysis	366
6.3	Visibility	367
6.3.1	Viewsheds and RF propagation	367
6.3.2	Line of sight	370
6.3.3	Isovist analysis and space syntax	371
6.4	Watersheds and Drainage	374
6.4.1	Drainage modeling	374
6.4.2	D-infinity model	375
6.4.3	Drainage modeling case study	376
6.5	Gridding, Interpolation and Contouring	378
6.5.1	Overview of gridding and interpolation	378
6.5.2	Gridding and interpolation methods	379
6.5.3	Contouring	385
6.6	Deterministic Interpolation Methods	387
6.6.1	Inverse distance weighting (IDW)	388
6.6.2	Natural neighbor	391
6.6.3	Nearest-neighbor	393
6.6.4	Radial basis and spline functions	393
6.6.5	Modified Shepard	395
6.6.6	Triangulation with linear interpolation	396
6.6.7	Triangulation with spline-like interpolation	396
6.6.8	Rectangular or bi-linear interpolation	397
6.6.9	Profiling	397

6.6.10	Polynomial regression	398
6.6.11	Minimum curvature	398
6.6.12	Moving average	399
6.6.13	Local polynomial	399
6.6.14	Topogrid/Topo to raster	399
6.7	Geostatistical Interpolation Methods	400
6.7.1	Core concepts in Geostatistics	402
6.7.2	Kriging interpolation	414
7	Network and Location Analysis	425
7.1	Introduction to Network and Location Analysis	427
7.1.1	Terminology	427
7.1.2	Source data	429
7.1.3	Algorithms and computational complexity theory	430
7.2	Key Problems in Network and Location Analysis	431
7.2.1	Overview - network and locational analysis	432
7.2.2	Heuristic and meta-heuristic algorithms	439
7.3	Network Construction, Optimal Routes and Optimal Tours	449
7.3.1	Minimum spanning tree	449
7.3.2	Gabriel network	450
7.3.3	Steiner trees	452
7.3.4	Shortest (network) path problems	453
7.3.5	Tours, travelling salesman problems and vehicle routing	458
7.4	Location and Service Area Problems	463
7.4.1	Location problems	464
7.4.2	Larger p-median and p-center problems	466
7.4.3	Service areas	472
7.5	Arc Routing	474
7.5.1	Network traversal problems	474
8	Geocomputational methods and modeling	477
8.1	Introduction to Geocomputation	479
8.1.1	Modeling dynamic processes within GIS	480
8.2	Geosimulation	485
8.2.1	Cellular automata (CA)	486

8.2.2	Agents and agent-based models	489
8.2.3	Applications of agent-based models	492
8.2.4	Advantages of agent-based models	497
8.2.5	Limitations of agent-based models	499
8.2.6	Explanation or prediction?	500
8.2.7	Developing an agent-based model	501
8.2.8	Types of simulation/modeling (s/m) systems for agent-based modeling	503
8.2.9	Guidelines for choosing a simulation/modeling (s/m) system	504
8.2.10	Simulation/modeling (s/m) systems for agent-based modeling	506
8.2.11	Verification and calibration of agent-based models	517
8.2.12	Validation and analysis of agent-based model outputs	518

8.3 Artificial Neural Networks (ANN) 520

8.3.1	Introduction to artificial neural networks	520
8.3.2	Radial basis function networks	534
8.3.3	Self organizing networks	536

8.4 Genetic Algorithms and Evolutionary Computing 543

8.4.1	Genetic algorithms - introduction	543
8.4.2	Genetic algorithm components	544
8.4.3	Example GA applications	549
8.4.4	Evolutionary computing and genetic programming	552

9 Big Data and Geospatial Analysis 555

9.1 Big Data and Research 558

9.2 Types of Big Data 561

9.2.1	Human-sourced data	561
9.2.2	Process-Mediated data	562
9.2.3	Machine-Generated data	564

9.3 Challenges of Big Data 566

9.3.1	Access	566
9.3.2	Ethics	567
9.3.3	Data Quality	568
9.3.4	Repurposing Data	568
9.3.5	Demographic Bias	569
9.3.6	Spatial and temporal Coverage	571
9.3.7	Unstructured Data	572

9.3.8	Data Linkage	573
9.3.9	Tools and Skills	574

10 Resources **577**

10.1 References **579**

10.2 Appendices **599**

10.2.1	CATMOG Guides	599
10.2.2	R-Project spatial statistics software packages	601
10.2.3	Fragstats landscape metrics	604
10.2.4	Web links	608
