

## **C O N T E N T S**

### **Series Editor's Introduction 5**

### **Acknowledgments 7**

### **1. Introduction 9**

- Problems in the Analysis of Event Histories 10
- An Overview of Event History Methods 11

### **2. A Discrete-Time Method 14**

- A Discrete-Time Example 15
- The Discrete-Time Hazard Rate 16
- A Logit Regression Model 17
- Estimating the Model 18
- Estimates for the Biochemistry Example 19
- The Likelihood-Ratio Chi-Square Test 20
- Problems with the Discrete-Time Method 21
- Discrete Versus Continuous Time 22

### **3. Parametric Methods for Continuous-Time Data 22**

- The Continuous-Time Hazard Rate 23
- Continuous-Time Regression Models 24
- Maximum Likelihood Estimation 25
- An Empirical Example 26
- Censoring 28
- Some Other Models 29
- Choosing a Model 30
- Unobserved Sources of Heterogeneity 32

### **4. Proportional Hazards and Partial Likelihood 33**

- The Proportional Hazards Model 34
- Partial Likelihood 34
- Time-Varying Explanatory Variables 36
- Adequacy of the Proportional Hazards Model 38
- Choice of Origin of the Time Scale 40
- Partial Likelihood for Discrete-Time Data 41

**5. Multiple Kinds of Events 42**

- A Classification of Multiple Kinds of Events 42
- Estimation for Multiple Kinds of Events 45
- Models for Competing Risks 46
- An Empirical Example of Competing Risks 47
- Dependence Among Different Kinds of Events 50

**6. Repeated Events 51**

- A Simple Approach 51
- Problems with Repeated Events 53
- Extending the Recidivism Example 55
- Left Censoring 56

**7. Change of States 57**

- Transition Rates 58
- An Analysis of Job Changes 59
- Simplifying the Model 63

**8. Conclusion 65**

**Appendix A: Maximum Likelihood and Partial Likelihood 67**

**Appendix B: Program Listings for GLIM, SAS,  
and BMDP Examples 72**

**Appendix C: Computer Programs 78**

**Notes 81**

**References 83**

**About the Author 87**
