

List of symbols

1 Basic concepts in microfluidics

- 1.1 Lab-on-a-chip technology
- 1.2 Scaling laws in microfluidics
- 1.3 Fluids and fields
- 1.4 SI units and mathematical notation
- 1.5 Perturbation theory
- 1.6 Eigenfunction expansion
- 1.7 Further reading
- 1.8 Exercises
- 1.9 Solutions

2 Governing equations

- 2.1 Mass flux, conservation of mass, and the continuity equation
- 2.2 Momentum flux, force densities, and the equation of motion
- 2.3 Energy flux and the heat-transfer equation
- 2.4 Further reading
- 2.5 Exercises
- 2.6 Solutions

3 Basic flow solutions

- 3.1 Fluids in mechanical equilibrium
- 3.2 Liquid film flow on an inclined plane
- 3.3 Couette flow
- 3.4 Poiseuille flow
- 3.5 Poiseuille flow in shape-perturbed channels
- 3.6 Poiseuille flow for weakly compressible fluids
- 3.7 Stokes drag on a sphere moving in steady state
- 3.8 Exercises
- 3.9 Solutions

4	Hydraulic resistance and compliance	71
4.1	Viscous dissipation of energy for incompressible fluids	71
4.2	Hydraulic resistance of some straight channels	74
4.3	Shape dependence of hydraulic resistance	75
4.4	Reynolds number for systems with two length scales	79
4.5	Hydraulic resistance, two connected straight channels	81
4.6	Compliance	83
4.7	Equivalent circuit theory and Kirchhoff's laws	84
4.8	Exercises	86
4.9	Solutions	88
5	Diffusion	91
5.1	A random-walk model of diffusion	91
5.2	The convection-diffusion equation for solutions	93
5.3	The diffusion equation	95
5.4	The H-filter: separating solutes by diffusion	98
5.5	Taylor dispersion; a convection-diffusion example	100
5.6	Exercises	105
5.7	Solutions	106
6	Time-dependent flow	109
6.1	Starting a Couette flow	109
6.2	Stopping a Poiseuille flow by viscous forces	111
6.3	Flow induced by slowly oscillating boundaries	113
6.4	Accelerated motion of a spherical body in a liquid	116
6.5	Other time-dependent flows	117
6.6	Exercises	118
6.7	Solutions	118
7	Capillary effects	123
7.1	Surface tension	123
7.2	Contact angle	127
7.3	Capillary length and capillary rise	128
7.4	Capillary pumps	131
7.5	Marangoni effect; surface-tension gradients	134
7.6	Exercises	134
7.7	Solutions	136
8	Electrohydrodynamics	141
8.1	Polarization and dipole moments	141
8.2	Electrokinetic effects	143
8.3	The Debye layer near charged surfaces	145
8.4	Further reading	152
8.5	Exercises	152
8.6	Solutions	154

9 Electroosmosis	157
9.1 Electrohydrodynamic transport theory	157
9.2 Ideal electro-osmotic flow	157
9.3 Debye-layer overlap	161
9.4 Ideal EO flow with backpressure	162
9.5 The many-channel EO pump	165
9.6 The cascade EO pump	166
9.7 Further reading	169
9.8 Exercises	169
9.9 Solutions	170
10 Dielectrophoresis	173
10.1 Induced polarization and dielectric forces; heuristically	173
10.2 A point dipole in a dielectric fluid	174
10.3 A dielectric sphere in a dielectric fluid; induced dipole	175
10.4 The dielectrophoretic force on a dielectric sphere	177
10.5 Dielectrophoretic particle trapping in microfluidics	178
10.6 The AC dielectrophoretic force on a dielectric sphere	180
10.7 Exercises	182
10.8 Solutions	184
11 Magnetophoresis	187
11.1 Magnetophoresis and bioanalysis	187
11.2 Magnetostatics	188
11.3 Basic equations for magnetophoresis	190
11.4 Calculation of magnetic-bead motion	191
11.5 Magnetophoretic lab-on-a-chip systems	193
11.6 Further reading	194
11.7 Exercises	194
11.8 Solutions	195
12 Thermal transfer	197
12.1 Thermal effects in hydrostatics	198
12.2 Poiseuille flow in a transverse temperature gradient	201
12.3 Equivalent circuit model for heat transfer	205
12.4 The PCR biochip	208
12.5 Exercises	210
12.6 Solutions	211
13 Two-phase flow	213
13.1 Two-phase Poiseuille flow	213
13.2 Capillary and gravity waves	215
13.3 Gas bubbles in microfluidic channels	220
13.4 Droplets in microfluidic junctions and digital fluidics	224
13.5 Further reading	226
13.6 Exercises	226
13.7 Solutions	228

14	Complex flow patterns	231
14.1	Pressure-driven flow in shape-perturbed microchannels	231
14.2	Streamlines in a shape-perturbed channel	235
14.3	Lubrication theory	237
14.4	The staggered herring-bone mixer	238
14.5	Induced-charge electrolytic flow	240
14.6	Exercises	248
14.7	Solutions	249
15	Acoustofluidics	255
15.1	The acoustic-wave equation for zero viscosity	256
15.2	Acoustic waves in first-order perturbation theory	258
15.3	Viscous damping of first-order acoustic waves	260
15.4	Acoustic resonances	262
15.5	Acoustic waves in multilayer systems	264
15.6	Second-order acoustic fields	267
15.7	Further reading	270
15.8	Exercises	271
15.9	Solutions	272
16	Optofluidics	275
16.1	The optical wave equation in electrolytes	276
16.2	Molecular absorption and Beer–Lambert’s law	278
16.3	Molecular fluorescence and phosphorescence	281
16.4	Onchip waveguides	282
16.5	Onchip laser sources	283
16.6	Photonic bandgap structures in optofluidics	286
16.7	Further reading	288
16.8	Exercises	288
16.9	Solutions	289
17	Nanofluidics	291
17.1	Investigation of the no-slip boundary condition	291
17.2	Capillary filling of nanochannels	294
17.3	Squeeze flow in nanoimprint lithography	298
17.4	Nanofluidics and molecular dynamics	302
17.5	Exercises	304
17.6	Solutions	305
Appendix A Physical constants		309
A.1	Water	309
A.2	Viscosity	309
A.3	Diffusivity	310
A.4	Surface tension and contact angle	310

Appendix B	Dimensionless numbers	311
Appendix C	Curvilinear co-ordinates	313
C.1	Cartesian co-ordinates	313
C.2	Cylindrical polar co-ordinates	314
C.3	Spherical polar co-ordinates	316
Appendix D	The chemical potential	319
D.1	The partition function and the free energy	319
D.2	The chemical potential of a solution	320
Appendix E	The wave equation	321
Appendix F	Numerical simulations	325
F.1	The finite-element method (FEM)	325
F.2	The level set method and motion of interfaces	329
