

CONTENTS

CHAPTER I

	PAGES
INTRODUCTION	1-16

The position of psychology at the basis of all the social sciences now theoretically recognised but practically ignored—Historical explanation of this anomalous state of affairs—Illustrations of the need of the social sciences for better psychological foundations—Ethics—Economics—Political science—Philosophy of history—Jurisprudence.

SECTION I

THE MENTAL CHARACTERS OF MAN OF PRIMARY IMPORTANCE FOR HIS LIFE IN SOCIETY

CHAPTER II

THE NATURE OF INSTINCTS AND THEIR PLACE IN THE CONSTITUTION OF THE HUMAN MIND	17-38
-----------------------------------------------------------------------------------------	-------

The vagueness of current conceptions of instinct—The lack of agreement as to the rôle of instincts in the human mind—Instinctive process is truly mental, and involves knowing and feeling as well as doing—The physiological conception of an instinct as an innate disposition, having three parts corresponding to these three functions—The modification of instincts on their afferent and efferent sides—The relation of instinct to emotion—Instincts the prime movers of all human activity.

CHAPTER III

PAGES

THE PRINCIPAL INSTINCTS AND THE PRIMARY EMOTIONS OF MAN	39-76
----------------------------------------------------------------------	-------

Three principles mainly relied upon in distinguishing the primary emotions—The instinct of flight and the emotion of fear—The instinct of repulsion and the emotion of disgust—The instinct of curiosity and the emotion of wonder—The instinct of pugnacity and the emotion of anger—The instincts of self-abasement (or subjection) and of self-assertion (or self-display), and the emotions of subjection and elation (or negative and positive self-feeling)—The parental instinct and the tender emotion—The instinct of reproduction—The gregarious instinct—The instinct of acquisition—The instinct of construction.

CHAPTER IV

SOME GENERAL OR NON-SPECIFIC INNATE TENDENCIES	77-103
----------------------------------------------------------	--------

Sympathy or the sympathetic induction of the emotions—Suggestion and suggestibility—Contra-suggestion—Imitation—The tendency to play and the emulative impulse—Proposed modification of Professor Groos's theory of play—Habit—Temperament.

CHAPTER V

THE NATURE OF THE SENTIMENTS AND THE CONSTITUTION OF SOME OF THE COMPLEX EMOTIONS	104-136
------------------------------------------------------------------------------------------------	---------

Mr Shand's conception of a sentiment—Physiological interpretation of this conception—Complex emotions that do not imply the existence of sentiments—Admiration—Awe—Reverence—Gratitude—Scorn—Contempt—Loathing—Fascination—Envy—Complex emotions that imply the existence of sentiments—Reproach—Anxiety—Jealousy—Vengeful emotion—Resentment—Shame—Bashfulness—The nature of joyful and of sorrowful emotion—Of pity—Of happiness—Of surprise.

CONTENTS

XXV

CHAPTER VI

PAGES

THE DEVELOPMENT OF THE SENTIMENTS	137-149
---------------------------------------------	---------

Sentiments of three principal types : love, hate, and respect—The genesis of hate—Parental love as a type of highly complex sentiment—Active sympathy and its rôle in the genesis of the sentiment of affection between persons.

CHAPTER VII

THE GROWTH OF SELF-CONSCIOUSNESS AND OF THE SELF-REGARDING SENTIMENT	150-179
--------------------------------------------------------------------------------	---------

Illustration of behaviour unregulated by self-regarding sentiment—The problem of moral conduct defined—Genesis of ideas of self and of other selves—Why are we so much influenced by praise and blame ?—This is the crucial problem for the theory of morals—The solution furnished by the study of the growth of the self-regarding sentiment under the moulding influences of the social environment—Regulation of conduct by regard for praise and blame implies only egoistic motives—Complication of these motives by certain pseudo-altruistic motives and by quasi-altruistic motives springing from the extended self-regarding sentiment.

CHAPTER VIII

THE ADVANCE TO THE HIGHER PLANE OF SOCIAL CONDUCT	180-196
-------------------------------------------------------------	---------

Defects of public opinion as supreme sanction of conduct—Moral judgments are of two kinds, original and imitative—The relation of emotion to moral judgment—The moral sentiments and their relation to the moral tradition—The influence of admired personalities—The influence of native disposition on the growth of moral sentiments—The synthesis of the abstract moral sentiments and the self-regarding sentiment—The rôle of æsthetic admiration.

CHAPTER IX

PAGES

VOLITION	197-227
--------------------	---------

The weaker seems to overcome the stronger impulse in moral effort—Whence comes the energy that reinforces the weaker moral impulse?—Free will and determinism—The moral difficulty of determinism very real, though commonly misstated—Volition distinguished from other modes of conation—The immediate effects of volition—The inhibitory view of volition criticised—Volition defined and illustrated—Its determining energy traced to the self-regarding sentiment—Two types of hard choice—The sentiment for self-control—Character—its relation to the sentiments.

SECTION II

THE OPERATION OF THE PRIMARY TENDENCIES OF
THE HUMAN MIND IN THE LIFE OF SOCIETIES

CHAPTER X

THE REPRODUCTIVE AND THE PARENTAL INSTINCTS	228-239
-------------------------------------------------------	---------

Their relation to the birth-rate—The rival influences of reason and of the social sanctions on the operation of these instincts—No reason to suppose that these instincts are becoming weaker—The extensions of the field of operation of the parental instinct beyond the family.

CHAPTER XI

THE INSTINCT OF PUGNACITY	240-254
-------------------------------------	---------

Its operation among primitive peoples—Its rôle in the evolution of human nature and human societies—Its operation under the forms of revenge and moral indignation in the maintenance of social order—The tendency for emulation to supplant pugnacity.

CHAPTER XII

PAGES

THE GREGARIOUS INSTINCT	255-259
-----------------------------------	---------

The pernicious influence of its crude operation among civilised peoples—Its subtler operations in determining the structure of society.

CHAPTER XIII

THE INSTINCTS THROUGH WHICH RELIGIOUS CONCEPTIONS AFFECT SOCIAL LIFE	260-276
--------------------------------------------------------------------------------	---------

Fear—Subjection—Curiosity—The parental instinct—Their emotions blended in admiration, awe, reverence—The importance of the supernatural sanctions of custom—How the tender emotion became incorporated in the sentiment for the Divine power—Relation of religion to morality—Curiosity, the source of the spirit of inquiry, and hence of science.

CHAPTER XIV

THE INSTINCTS OF ACQUISITION AND CONSTRUCTION	277-279
---------------------------------------------------------	---------

CHAPTER XV

IMITATION, PLAY, AND HABIT	280-302
--------------------------------------	---------

The prime condition of collective mental life—And of the persistence and growth of tradition—Imitation as agent of social conservation—Imitation as an agent of progress—Play as socialising influence—Habit—Its rôle in social conservation.

SUPPLEMENTARY CHAPTER I

THEORIES OF ACTION	303-330
------------------------------	---------

The theory of action implied in foregoing discussions—Other theories of action—Psychological hedonism—The pleasure-pain theory—the ideo-motor theory—Intuitionist theories.

SUPPLEMENTARY CHAPTER II

PAGES

THE SEX INSTINCT	331-363
----------------------------	---------

General sketch of the rôle of the sex instinct in reproduction—The organisation of the sex instinct—It is complex on its perceptual as well as on its executive side—Lust and love—Sex instinct as a spring of energy—Its secondary social workings—The development of the instinct—Professor Freud's views examined—Repression and sublimation—Modesty and coyness—Sexual inversions and perversions—Co-education—Sex enlightenment—The problem of adolescence.

SUPPLEMENTARY CHAPTER III

THE DERIVED EMOTIONS	364-385
--------------------------------	---------

The derived emotions—Confidence—Hope—Anxiety—Despondency—Despair—Joy—Regret—Sorrow—Remorse—Their essential difference from the primary emotions—They are not forces in the same sense as these—Distress—Varieties of temper—The function of emotion.

SUPPLEMENTARY CHAPTER IV

NOTES ON CHAPTERS III. TO IX.	386-404
---------------------------------------	---------

The instinct of laughter—Humour—Some minor instincts—Supplementary remarks on play and suggestion—The theory of the sentiments and of the development of character.

SUPPLEMENTARY CHAPTER V

INSTINCTS OF MAN IN THE LIGHT OF RECENT DISCUSSION .	405-430
------------------------------------------------------	---------

The present state of opinion on instinct—Instinct in psycho-analytic theory—Recent developments of German psychology : the *Gestalt* school.

SUPPLEMENTARY CHAPTER VI

THE STRUCTURE OF CHARACTER	431-443
--------------------------------------	---------

CONTENTS

xxix

SUPPLEMENTARY CHAPTER VII

PAGES

THE HORMIC PSYCHOLOGY	444-494
---------------------------------	---------

Teleology, intrinsic and extrinsic—Two forms of teleological or purposive psychology, the hedonistic and the hormic—The hormic theory of action—The adequacy of the hormic theory—The advantages of the hormic theory—Origins of the hormic psychology.

SUPPLEMENTARY CHAPTER VIII

A RECTIFICATION, A DIFFICULTY, AND AN ADDITION	495-512
----------------------------------------------------------	---------

The objection that emotion results only from arrest of tendency—Acquired tastes and distastes.

INDEX	513-524
-----------------	---------
