00	0.3.4	The Mean and Intersections of Quantitative and Qualitative Data	12
00	0.3.5	Relating Proportions	13
201	1.0.1	The Chi-Squared Test	16
701	1.0.2	Inferential Testing	17
212	1.0.3	Nonparametric Methods	18
121	1.0.4	Nonparametric Bootstrapping	19
121	1.0.5	Parametric Bootstrapping and Approximate Matrix Distribution	20
120	1.0.6	Permutation Methods	21
381	1.0.7	Monte Carlo Simulation	22
381	1.0.8	Topological Properties	23
IM	1.0.9	Reference Notes	24
7	Stochastic Processes	303	
211	7.0.1	Introduction	304
211	7.0.2	Randomizing Discrete Dynamics	308
121	7.0.3	Environmental and Demographic Stochasticity	314
881	7.0.4	Markov Walks	318
201	7.0.5	Stochastic Processes	319
Preface	8.0.1	Reference Notes	xii
1. Introduction to Ecological Modeling	1		
1.1 Mathematical Models	1		
1.2 Rates of Change	6		
1.2.1 Taylor Polynomials	9		
1.2.2 Foraging Theory	12		
1.3 Balance Laws	18		
1.4 Temperature in the Environment	25		
1.4.1 Heat Transfer	25		
1.4.2 Dynamic Temperatures	27		
1.4.3 Development Rate	32		
1.5 Dimensionless Variables	37		
1.6 Descriptive Statistics	40		
1.7 Regression and Curve Fitting	44		
1.8 Reference Notes	51		
2. Population Dynamics for Single Species	55		
2.1 Laws of Population Dynamics	56		
2.2 Continuous-Time Models	60		
2.3 Qualitative Analysis of Population Models	65		
2.4 Dynamics of Predation	73		
2.5 Discrete-Time Models	81		
2.6 Equilibria, Stability, and Chaos	87		
2.7 Reference Notes	96		

3. Structure and Interacting Populations	99
3.1 Structure: Juveniles and Adults	99
3.2 Structured Linear Models	102
3.2.1 Sensitivity and Elasticity	107
3.3 Nonlinear Interactions	115
3.4 Appendix: Matrices	124
3.4.1 Matrix Notation and Algebra	124
3.4.2 Linear Algebraic Equations	130
3.4.3 The Eigenvalue Problem	135
3.5 Reference Notes	141
4. Interactions in Continuous Time	143
4.1 Interacting Populations	143
4.2 Phase Plane Analysis	151
4.3 Linear Systems	158
4.4 Nonlinear Systems	165
4.5 Bifurcation	173
4.5.1 Rosenzweig–MacArthur Model	177
4.6 Reference Notes	186
5. Concepts of Probability	189
5.1 Introductory Examples and Definitions	189
5.2 The Hardy–Weinberg Law	199
5.3 Continuous Random Variables	202
5.3.1 The Normal Distribution	203
5.3.2 General Random Variables	206
5.3.3 Predation with a Random Search	212
5.3.4 Central Limit Theorem	216
5.4 Discrete Random Variables	220
5.4.1 Likelihood	226
5.5 Joint Probability Distributions	232
5.6 Covariance and Correlation	238
5.6.1 Covariance	238
5.6.2 Covariance Matrix	241
5.7 Reference Notes	243
6. Statistical Inference	247
6.1 Introduction	248
6.2 Interval Analysis	250
6.2.1 Known Variance	250
6.2.2 The Gamma Distribution	254
6.2.3 The Sample Variance	257

6.2.4	The Mean with Unknown Variance	258
6.3	Estimating Proportions	260
6.4	The Chi-Squared Test	263
6.5	Hypothesis Testing	267
6.6	Bootstrap Methods	275
6.6.1	Nonparametric Bootstrapping	277
6.6.2	Parametric Bootstrapping	286
6.6.3	Permutation Methods	289
6.7	Reference Notes	300
7.	Stochastic Processes	303
7.1	Introduction	303
7.2	Randomizing Discrete Dynamics	308
7.2.1	Environmental and Demographic Stochasticity	314
7.3	Random Walk	319
7.4	Birth Processes	323
7.4.1	Linear Differential Equations	323
7.4.2	Simple Birth Process	325
7.4.3	Interevent Times and Simulation	329
7.5	Stochastic Differential Equations	331
7.5.1	Examples	331
7.5.2	The Wiener Process	332
7.5.3	Stochastic Differential Equations	337
7.6	SDEs from Markov Models	342
7.7	Solving SDEs	347
7.7.1	The Itô Identity	347
7.7.2	Stochastic Integrals	349
7.7.3	Solving SDEs	350
7.8	The Fokker–Planck Equation	352
7.9	Reference Notes	358
A.	Hints and Solutions to Exercises	361
