

TABLE OF CONTENTS

Plenary lectures	9
<i>K. Ruthven: Towards a calculator-aware number curriculum</i>	<i>9</i>
<i>P. Scherer: Investigating children learning mathematics / investigating mathematics</i>	<i>22</i>
<i>J. M. Watson: The development of statistical understanding at the elementary school level</i>	<i>33</i>
<i>R. Zazkis: Number theory in mathematics education: Queen and Servant</i>	<i>46</i>
Research Reports	61
<i>S. Anastasiadou: Compartmentalization in learning process: The case study of Greek primary school pupils' in statistical concepts</i>	<i>61</i>
<i>A. Baki, T. Gökçek: Elementary teachers' concerns about the new mathematics curriculum in Turkey</i>	<i>69</i>
<i>J. Bobis: Facilitating change as part of a large-scale numeracy program</i>	<i>76</i>
<i>B. Brandt, K. Tatsis: Examining interactional aspects of students' participation in mathematical classroom discussions</i>	<i>85</i>
<i>B. Doig, S. Groves: The answer is correct but can I explain it? Student explanations in mathematics</i>	<i>92</i>
<i>D. Evans, I. Strnadová, M. Wong: Examining number sense: An exploratory Study of students with additional learning needs</i>	<i>101</i>
<i>T. Fritzlar: Why is it so difficult to use a "good problem" in a "good way" for teaching?</i>	<i>109</i>
<i>R. Griffiths: The Letterbox Club: the pilot stage of a project aiming to raise achievement in number for children aged 7 to 11 who are in foster car</i>	<i>118</i>
<i>S. Groves, B. Doig, R. Tytler: Fun or profit – primary students' perceptions of mathematics and science</i>	<i>126</i>
<i>M. Hejný, D. Jirotková, J. Slezáková: Procept – schema – structure</i>	<i>134</i>
<i>G. Krauthausen: Using the computer for >doing mathematics< – development of the ZAHLENFORSCHER [NUMBER EXPLORER] software for grade 2-6</i>	<i>142</i>
<i>J. Lakka: Building efficient thinking strategies for addition and subtraction in early primary school mathematics</i>	<i>150</i>
<i>M. Lamm, K. Williams, D. Pugalee: Using children's literature to develop mathematical understanding</i>	<i>158</i>
<i>E. Levenson, P. Tsamir, D. Tirosh: Elementary school teachers' preferences for mathematically-based and practically-based explanations</i>	<i>166</i>
<i>J.A. Juárez López, C.R. Real Ortega: Attitudes toward mathematics using spreadsheets in first grade of Tele-secondary school</i>	<i>173</i>

<i>J. Macháčková, M. Tichá: Assessment of knowledge and conceptions through problem posing: The case of fractions</i>	178
<i>A.A. Nicolau, D. Pitta-Pantazzi: Thinking styles and the solution of routine and modeling problems: A first investigation</i>	186
<i>I. Papadopoulos: Relating problem-solving strategies and van Hiele levels</i>	194
<i>C. Pearn: Basic Number Facts: How many can I remember and is it important?</i>	203
<i>D. Pražáková: Math related questions in children-directed learning</i>	211
<i>M. Priolet, J. Novotná: Solving numerical problems in the 3rd year of Primary school: Teaching and learning with connections</i>	217
<i>F. Roubíček: Some aspects of communication in the teaching of mathematics – the semiotic viewpoint</i>	225
<i>J. Ruppelová: Types of word problem visualization in pupils' solutions</i>	233
<i>R. Skalková: Playful mathematics as a method of motivation</i>	241
<i>E. Svoboda: Intuition of geometrical relations in plane in works of 4-7 year old children</i>	249
<i>X. Xistouri, D. Pitta-Pantazzi: The theory of successful intelligence in solving 3D problems</i>	257
Workshops	267
<i>S. van den Boogaard, M. van den Heuvel-Panhuizen: Identifying characteristics of picture books that support the learning of mathematics by kindergartners</i>	267
<i>A. Jančařík: The use of games in the development of mathematical skills and mathematical thinking</i>	269
<i>S. Kmetič: Challenges for young mathematicians</i>	270
<i>G.H. Littler et al.: Misconceptions in primary number</i>	273
<i>J. Novotná, A. Hošpesová: LPS methodology for examining (investigating) the mathematics classroom on primary school level</i>	274
<i>M.T. Totto, K. Bankov: The organization of content and experiences in mathematics teacher education and its relation to mathematics teaching knowledge</i>	276
Posters	279
<i>J. Cihlár, P. Eisenmann, M. Krátká, P. Vopěnka: A coherence of ontogeny and phylogeny of infinity within the context of a geometrical problem</i>	279
<i>H. Čechová, H. Klimová: Motivation in the process of creation of a text with mathematical content</i>	280
<i>H. Hrabáková: Didactical situations developing pupils' mathematical culture of problem solving</i>	281
<i>L. Ilucová: Geometrical thinking, public transport and tessellations</i>	282
<i>E. Jagoda: The cycles of a development of a concept of line symmetry</i>	283

<i>M. Kaslová: Reasoning and consideration at children from 5 to 7 years old</i>	284
<i>MA²ThE TE AMO project</i>	285
<i>G. Pavlovičová, V. Vasková: Mathematics project task – Secret agent</i>	286
<i>Š. Pěchoučková: Children's idea of symmetry at the age of 6 – 7</i>	287
<i>T. Petříková: The conversion of physical units by pupils with slight mental handicap</i>	289
<i>F. Roubíček: Different forms of modeling as a support of communication between the teacher and the pupil</i>	290
<i>B. Strassfeld: MALTED - Mathematics and literature together – Educational delight</i>	291
<i>A. Šlégrová: The project teaching as a one of the approaches to teaching mathematics</i>	292
<i>M. Šulista: Teaching mathematics in context of multicultural education</i>	293
<i>L. Tejkalová: On motivating features of CLIL</i>	294
