Vallary Hanchina, Ph.D., is Associate Professor at the University of Vermont. Her research has centered on the relationships from mother-child interaction examples to social cognition and child cognitive and language development. She has developed and validated new measures of theory of mind (see <https://www.newrehab.vt.edu/vtury.com/>) that can be used in research and practice with typically developing individuals and those with developmental disabilities. She is currently investigating the efficacy of story-based interventions to facilitate the social deficits of autism spectrum disorder (ASD). With the use of eye-tracking
