

# **1 Thermochemical Principles 1**

- 1.1 Some Basic Definitions and Concepts 1
- 1.2 Enthalpy and Entropy 4
- 1.3 Gibbs Free Energy, Chemical Potential, and the Equilibrium Constant 7
- 1.4 Equilibrium Calculations 10
  - 1.4.1 Pure Solids and Liquids and Their Mixtures 10
  - 1.4.2 Gases 15
  - 1.4.3 Solutes 17
  - 1.4.4 Solvent Water 18
- 1.5 Summation of Reaction-Thermodynamic Properties 18
- 1.6 The Effect of Changes in Temperature and Pressure on the Equilibrium Constant 19
  - 1.6.1 Introduction 19
  - 1.6.2 Effect of Temperature 20
  - 1.6.3 Effect of Pressure 28
- Study Questions 32
- Problems 33
- Chapter 1 Appendix 38

# **2 Chemical Kinetics 50**

- 2.1 Chemical Equilibrium and Chemical Kinetic Concepts 50
- 2.2 Elementary and Overall Reactions 56
- 2.3 Rate Laws 57

- 2.4 Effect of Temperature on Reaction Rates 60
- 2.5 Mineral Precipitation/Dissolution Reaction Kinetics 64
- 2.6 Absolute Rate (Transition State) Theory and the Activated Complex 65
- 2.7 Some Kinetic Examples of Geochemical Interest 68
  - 2.7.1 The  $\text{FeSO}_4^+$  Complex 68
  - 2.7.2 Radioactive Decay: The Example of  $^{14}\text{C}$  68
  - 2.7.3 Oxidation of Organic Matter and Sulfate Reduction 70
  - 2.7.4 Gypsum Dissolution 71
  - 2.7.5 Oxidation of Ferrous Iron 71
  - 2.7.6 Pyrite and Marcasite Oxidation by Ferric Iron 73
  - 2.7.7 Calcite Dissolution and Precipitation 73
  - 2.7.8 Silica Polymorphs, Dissolution, and Precipitation 74
  - 2.7.9 Silicates Including Feldspars, Dissolution, and Precipitation 75
- 2.8 Summary Observations 78
  - Study Questions 79
  - Problems 79

## **3 Aqueous Complexes 82**

- 3.1 Introduction and Overview 82
  - 3.1.1 Outer- and Inner-Sphere Complexes 84
  - 3.1.2 General Observations on Complexation 88
- 3.2 Metal Cation-Ligand Relations in Complexes 88

- 3.3 Complexation Mass-Balance and Equilibria Equations 90
- 3.4 Hydrolysis of Cations in Water and Ionic Potential 95
- 3.5 Electronegativity and the Stabilities of Inner-Sphere Complexes 99
- 3.6 Schwarzenbach's Classes A, B, and C, and Pearson's Hard and Soft Acids and Bases 103
- 3.7 Model-Prediction of the Stabilities of Complexes 109
- 3.8 The Thermodynamics of Complexation 111
- 3.9 Distribution of Complex Species as a Function of pH 112
- 3.10 Toxicity and the Role of Soft-Acid Metal Cations 114
- 3.11 Summary 118
- Study Questions 119
- Problems 120

## **4 Activity Coefficients of Dissolved Species 123**

- 4.1 Activities of Dissolved Species, Ionic Strength 123
- 4.2 Activity Coefficients of Ions 124
  - 4.2.1 Mean Ion-Activity Coefficients 124
  - 4.2.2 Dilute Solutions and the Debye-Hückel Equation 127
  - 4.2.3 Intermediate Ionic Strengths: The Davies and Truesdell-Jones Equations, Specific Ion-Interaction Theory 129
  - 4.2.4 Stoichiometric and Effective Ionic Strength 135
  - 4.2.5 High Ionic Strengths and the Pitzer Model 138
- 4.3 Overview of Activity Coefficient Models for Ions 142
- 4.4 Activity Coefficients of Molecular Species 144
  - Study Questions 145
  - Problems 146

## **5 Acids and Bases 149**

- 5.1 The Significance and Measurement of pH 149
- 5.2 Acids and Bases: Overview 152
- 5.3 Carbon Dioxide and Carbonic Acid Species in Natural Waters 153
  - 5.3.1 Theoretical Relationships 153

5.3.2	Carbonic Acid/pH Relations in Natural Waters	155
5.4	Humic and Fulvic Acids	161
5.5	Summary of Controls on the pH of Natural Waters	162
5.6	Acidity	165
5.7	Alkalinity	166
5.8	Acid-Base Properties of Minerals and Rocks	167
5.9	Acidity and Alkalinity Determination	168
5.9.1	The Titration Mass Balance	168
5.9.2	Acidity Titration	168
5.9.3	Alkalinity Titration	173
5.9.4	Calculation of Titration Curves for Acid and Base Determination	174
5.10	Buffer Capacity of Aqueous Species and Mineral Systems	180
5.10.1	Buffer Capacity of Water	181
5.10.2	Weak Monoprotic Acids	182
5.10.3	Polyprotic Acids	183
5.10.4	Carbonic Acid	183
5.10.5	Calcite-Carbonic Acid	185
5.10.6	Clays	187
	Study Questions	189
	Problems	190

## **6 Carbonate Chemistry 193**

6.1	Occurrence and Stability of the Calcium-Magnesium Carbonates	193
6.2	Calcite Solubility as a Function of CO <sub>2</sub> Pressure	197
6.3	Calcite Solubility as a Function of pH and CO <sub>2</sub> Pressure	199
6.4	Influences on the Solubility and Saturation State of Carbonate Minerals	202
6.4.1	Dissolution and Exsolution of CO <sub>2</sub>	202
6.4.2	Photosynthesis, Aerobic Decay, and Respiration	204
6.4.3	Evaporation	204
6.4.4	The Common Ion Effect	205
6.4.5	Temperature	205
6.4.6	Mixing	205
6.5	The Solubility of Dolomite	208
6.6	Open and Closed Carbonate Systems	211
6.7	The Saturation State of Natural Waters with Respect to Calcite and Dolomite	216
6.8	Solubilities of Other Carbonate Minerals	217
6.9	Explanation for Carbonate Mineral Supersaturation	219
6.10	A Surface-Water Carbonate System: Slab Cabin Run	223

- 6.11 The Carbonate Mineral Saturation State of  
Some Representative Groundwaters  
and Seawater 225  
Study Questions 228  
Problems 229

## **7 Chemical Weathering 231**

- 7.1 General Observations 231  
7.2 Weathering Rates of Some Rock-Forming  
Minerals 233  
7.3 A Weathering Example 234  
7.4 Soil Classification and Processes 236  
7.5 Aqueous Silica Species and the Solubilities  
of Quartz, Amorphous Silica,  
and Other Silica Polymorphs 241  
7.6 Silica in Natural Waters 245  
7.7 Solubility of the Aluminum Oxyhydroxides,  
Kaolinite, and the Ferric  
Oxyhydroxides as a Function of pH 248  
7.8 Chemical Weathering Models 256  
Study Questions 263  
Problems 265

## **8 General Controls on Natural Water Chemistry 266**

- 8.1 The Hydrologic Cycle, Residence Time, and  
Water-Rock Ratio 266  
8.2 Water in the Hydrosphere 267  
8.3 Controls on the Composition of Subsurface  
Waters 270  
8.4 Precipitation Chemistry and Acid  
Rain 274  
8.4.1 The pH of Rain Due to Atmospheric  
Carbon Dioxide 274  
8.4.2 The General Composition of  
Precipitation 275  
8.4.3 Acid Rain 278  
8.4.4 Trace Elements in Rain 289  
8.5 Soil-Moisture Chemistry 290  
8.6 General Chemistry of Surface- and  
Groundwaters 293  
8.7 Controls on the Chemical Composition of  
Rivers 296  
8.8 Comparison of Mean River Water and  
Seawater 296  
8.9 Water Quality versus Quantity 298  
8.9.1 Mixing of Waters 298  
8.9.2 Stream Flow versus Quality 300  
8.10 The Importance of Defining Background  
Water Quality 304  
Study Questions 307  
Problems 309

## **9 The Geochemistry of Clay Minerals 312**

- 9.1 Introduction 312
- 9.2 Crystal Chemistry of Important Clay Minerals 312
  - 9.2.1 The Kaolinite Group and Other Two-Layer Phyllosilicates 313
  - 9.2.2 Three-Layer Phyllosilicates 316
- 9.3 The Occurrence of Common Clay Minerals 319
- 9.4 Applicability of Equilibrium Concepts 322
- 9.5 Clay Mineral Equilibria and Phase Diagrams 324
- 9.6 The Thermodynamic Stability of Complex Clay Minerals 337
  - Study Questions 339
  - Problems 340

## **10 Adsorption-Desorption Reactions 343**

- 10.1 Properties of Sorbent Minerals 343
  - 10.1.1 Particle Size and Surface Area 343
  - 10.1.2 Surface Charge and Surface-Site Density 344
  - 10.1.3 Cation Exchange Capacity of Some Natural Materials 351
- 10.2 Sorption Isotherms and the Distribution Coefficient 353
  - 10.2.1 The Freundlich Adsorption Isotherm and the Distribution Coefficient  $K_d$  353
  - 10.2.2 The Langmuir Adsorption Isotherm 360
  - 10.2.3 General Discussion of the Adsorption Isotherm Models 361
  - 10.2.4 The Adsorption Isotherm Models as Defined in MINTEQA2 364
- 10.3 Ion-Exchange Type Models and Concepts 365
  - 10.3.1 Simple Ion Exchange 365
  - 10.3.2 The Power Exchange Function 366
- 10.4 Electrostatic Adsorption Models 369
  - 10.4.1 Introduction 369
  - 10.4.2 General Assumptions and Attributes of Three Models 372
  - 10.4.3 Diffuse-Layer and Constant Capacitance Models 376
  - 10.4.4 Triple-Layer Model 381
  - 10.4.5 Comparison of the Models 385
  - 10.4.6 Estimation of Intrinsic Adsorption Constants 387
  - 10.4.7 Application of the Electrostatic Adsorption Models to Natural Systems 391
- 10.5 Adsorption Models and Contaminant Transport Modeling 393

## **11 Oxidation-Reduction Concepts 403**

- 11.1 Redox Theory and Measurement 403
  - 11.1.1 General Redox Reaction 403
  - 11.1.2 The Standard Hydrogen Electrode 407
  - 11.1.3 The Eh-pH Stability Field of Water 408
  - 11.1.4 Measured versus Theoretical Redox Potentials 409
- 11.2 The Redox Behavior of Natural Systems 416
  - 11.2.1 Redox Reaction Sequences and Redox Ladders 416
  - 11.2.2 General Controls on the Redox State of Natural Waters 420
  - 11.2.3 Berner's Redox Classification and Oxidative and Reductive Capacity 421
  - 11.2.4 The Redox Interface 424
- Study Questions 427
- Problems 429

## **12 Iron and Sulfur Geochemistry 431**

- 12.1 Iron Geochemistry 431
  - 12.1.1 Introduction 431
  - 12.1.2 Stability Constants of Aqueous Complexes 431
  - 12.1.3 Ferric Oxyhydroxides 435
  - 12.1.4 Eh-pH Diagram for the Fe-O<sub>2</sub>-CO<sub>2</sub>-S-H<sub>2</sub>O System 441
- 12.2 Sulfur Geochemistry 445
  - 12.2.1 Thermodynamic Data for Substances in the System S-O<sub>2</sub>-H<sub>2</sub>O 445
  - 12.2.2 Acid-Base Reactions 445
  - 12.2.3 Redox Reactions 449
- 12.3 Iron-Sulfur Redox Chemistry 453
  - 12.3.1 Occurrence and Solubility of Fe(II)-Sulfide Minerals 453
  - 12.3.2 Eh-pH Relationships in the System Fe-O<sub>2</sub>-CO<sub>2</sub>-S-H<sub>2</sub>O 455
  - 12.3.3 Acid Mine Waters 457
- Study Questions 475
- Problems 475
- Chapter 12 Appendix 479

## **13 Actinides and Their Daughter and Fission Products 486**

- 13.1 Radioactivity 487
  - 13.1.1 Stable and Unstable Nuclei 487

13.1.2	Modes of Radioactive Decay	487
13.1.3	Units of Radioactivity and Decay Laws	487
13.1.4	Natural Thorium, Uranium, and Plutonium	488
13.1.5	Radioactive Decay Series	489
13.1.6	Radioactive Equilibrium and Steady State	491
13.1.7	Alpha Recoil and Radon Emanation	492
13.1.8	Measuring Radioactivity and the Mass of Radionuclides	494
13.2	Aqueous Geochemistry of Uranium	495
13.2.1	Introduction	495
13.2.2	Selected Thermodynamic Data	496
13.2.3	Aqueous Speciation and Solution-Mineral Equilibria	496
13.2.4	Adsorption-Desorption Reactions and Models	508
13.3	Uranium Ore Deposits	512
13.3.1	Origin of Low-Temperature Uranium Deposits	512
13.3.2	Uranium Ore Deposits as Analogs for a Nuclear Waste Repository	512
13.4	Nuclear Power and High-Level Nuclear Wastes	515
13.4.1	Composition of Nuclear Fuel and High- Level Nuclear Wastes	515
13.4.2	The Long-Term Health Risk of High- Level Nuclear Wastes in a Geologic Repository	517
13.5	Geochemistry of Important Radionuclides in a Geological Repository	519
13.5.1	Thermodynamic Stability and Geochemistry of I, Tc, Am, Np, and Pu Aqueous Species and Solids	519
13.5.2	Solubility Controls on Releases	531
13.5.3	Adsorption Controls on Releases	536
	Study Questions	543
	Problems	544
	Chapter 13 Appendix	547

## **Geochemical Computer Models 558**

Some Example Geochemical Computer Models	558
Obtaining Geochemical Software	560

## **References 562**

## **Index 590**
