## I OVERVIEW

<b>Chapter 1</b>	<b>Contingent constructions: cultural landscapes and environmental change</b>	<b>3</b>
	1.0 Chapter summary	3
	1.1 Disappearing nature and the lessons of the past	3
	1.2 Disciplines and dualisms	5
	1.3 Contingent constructions	7
	1.4 Writing and reading this book	9

## II METHODOLOGICAL AND CONCEPTUAL TOOLS FROM THE SCIENCES

<b>Chapter 2</b>	<b>Transformed landscapes: human impacts and the palaeoecological record</b>	<b>13</b>
	2.0 Chapter summary	13
	2.1 Changing the face of the Earth	13
	2.2 Landscapes of colonization	18
	2.3 Hunter-gatherer / agricultural landscapes	24
	2.4 Post-industrial impacts	30
	2.5 Strengths, limitations and future directions	32
<b>Chapter 3</b>	<b>The question of naturalness: environmental change in ecology and palaeoecology</b>	<b>34</b>
	3.0 Chapter summary	34
	3.1 The change in environmental change	34
	3.2 Ecology	36
	3.3 Palaeoecology	38

3.4 People and disturbance	40
3.5 Change in global environmental change research	43

### III METHODOLOGICAL AND CONCEPTUAL TOOLS FROM THE HUMANITIES

<b>Chapter 4</b>	<b>The social construction of nature and landscape</b>	<b>49</b>
4.0	Chapter summary	49
4.1	Culture, nature and landscape	49
4.2	Wild and tame	56
4.3	Landscapes of the prehistoric past	57
<b>Chapter 5</b>	<b>Production of knowledge and its policy implications</b>	<b>66</b>
5.0	Chapter summary	66
5.1	Researching culture and the culture of research	66
5.2	Theorizing cultural processes in global change research	67
5.3	Climate change	70
5.4	Rethinking deforestation	73
5.5	Cultural landscapes as 'discourse materialized'	77

### IV CONTEMPORARY ISSUES AND THE LONG-TERM PERSPECTIVE

<b>Chapter 6</b>	<b>Protecting places</b>	<b>83</b>
6.0	Chapter summary	83
6.1	Mechanisms of protection	83
6.2	World Heritage cultural landscapes	84
6.3	Uluru-Kata Tjuta National Park	94
6.4	The inheritance of future generations	98
<b>Chapter 7</b>	<b>Restored, (p)reserved and created landscapes</b>	<b>99</b>
7.0	Chapter summary	99
7.1	Managing for change	99
7.2	Restored landscapes: going backwards?	100
7.3	Preserved landscapes: freezing the present?	111
7.4	Created landscapes: a step forward?	117
7.5	Implications	118
<b>Chapter 8</b>	<b>Humanized landscapes: a place for people?</b>	<b>119</b>
8.0	Chapter summary	119
8.1	Living landscapes	119
8.2	Indigenous peoples and environmental management	120
8.3	Developing countries	130
<b>Chapter 9</b>	<b>Identity, heritage and tourism</b>	<b>136</b>
9.0	Chapter summary	136
9.1	Identity and the past	136
9.2	Contested identities: landscapes of heritage	145
9.3	Selling culture and the past: landscapes of tourism	147
9.4	Educating the educators	152

Conclusion	155

Figures	
7.1 The Hobbs and Norton figure after modification: the comparison of two specific areas with similar Mediterranean bioclimates	103
7.2 Past and future vegetation cover of the East Lothian, Scotland, 1972-88	104
7.3 Hedgerow replanting, East Lothian, Scotland, 1972-88	107
7.4 Location in Tanzania of Kilimanjaro, Arusha, Lake Manyara, Tarangire, Ruaha, national parks, and Serengeti National Park/Ngorongoro Conservation Area, and primary land use immediately adjacent to these parks	114
7.5 Proposed superpark spanning Zimbabwe, South Africa and Mozambique	115
7.6 Simulated potential distributions of <i>Abies alba</i> , <i>Acacia pseudoplatanus</i> and <i>Quercus ilex</i> under the present climate and a mean $2 \times \text{CO}_2$ climate as predicted by four atmospheric general circulation models (GCMs)	111
7.7 The Rakiura Titi Islands, southern New Zealand	112
7.8 Some uses of common tree and shrub species in New Zealand	113
7.9 Plains, China	114
7.10 The changing relationship between humans and the natural environment over the course of the Holocene	115
7.11 Blumler's disturbance model	116
7.12 Charcoal peaks in long continuous records from the Australian region in relation to the marine oxygen isotope record	117
7.13 Summary of variations in sediments and signs of human activity from five locations in western Uganda	118
7.14 New Guinea location map	119
7.15 Sedimentary charcoal, climate and occupation sites in highland New Guinea since 20000 BP	120
7.16 Comparison of climatic trends and human impacts in New Guinea highlands over the past 2000 years	121
7.17 Relative importance of burning in time slices from the Holocene deduced from individual site rankings of charcoal abundance for 58 site records, and separately for different ecosystems, in south-eastern Australia	122
7.18 Spatial and temporal scales of environmental change	123
7.19 The Clementsian model of succession after disturbance in natural landscapes, as reproduced and critiqued by Blumler	124
7.20 Maps showing the times of first arrival of four boreal species/genera in the eastern USA, moving northward in during the late Wisconsin and early Holocene	125
7.21 A conceptual model illustrating humanity's direct and indirect effects on the Earth system	126
7.22 Human dominance or alteration of several major components of the Earth system	127
7.23 The prehistoric archaeological landscape at Loughcrew, Ireland	128
7.24 Four views of Silbury Hill showing how the platform projects above the skyline	129
7.25 Cultural landscape in material form and the cognitive landscape, as originally constructed and as surviving or reconstructed	130
7.26 Human driving forces of global environmental change	131
7.27 July temperatures 18,000 years ago, 9000 years ago and at present: an example of the pixelated view of the world	132
7.28 Human dimensions of global environmental change research	133
7.29 Schematic map of anthropogenic vegetation changes in West Africa during the twentieth century as described in an influential NASA study and critiqued by Fairhead and Leach	134
