## Contents

Preface xvii

1	Historical Overview and Future Perspective 1
	Bernhard Eikmanns, Marcella Eikmanns, and Christopher J. Paddon
1.1	Use of Fermentation Procedures Before the Discovery of
	Microorganisms (Neolithic Era = New Stone Age Until 1850) 1
1.2	Investigation of Microorganisms and Beginning of Industrial
	Microbiology (1850 Until 1940) 7
1.3	Development of New Products and Procedures: Antibiotics and Other
	Biomolecules (From 1940) 11
1.4	Genetic Engineering Is Introduced into Industrial Microbiology (Fron
	Roughly 1980) 15
1.5	Future Perspectives: Synthetic Microbiology 18
	References 20
	Further Reading 21
2	Bioprocess Engineering 23
	Michael R. Ladisch, Eduardo Ximenes, Nathan Mosier, Abigail S. Engelberth,
	Kevin Solomon, and Robert Binkley
2.1	Introduction 23
2.1.1	Role of Bioreactors 25
2.1.2	Basic Bioreactor Configurations 26
2.1.3	Types of Growth Media 27
2.2	Nonstructured Models 28
2.2.1	Nonstructured Growth Models 28
2.2.1.1	Unstructured Models 29
2.2.1.2	Biotechnical Processes 30
2.2.2	Modeling Fermentations 32
2.2.3	Metabolic Pathways 39
2.2.4	Manipulation of Metabolic Pathways 40
2.2.5	Future of Pathway Design 42
2.3	Oxygen Transport 43
2.3.1	Aerobic versus Anaerobic Conditions 43
2.3.2	k <sub>L</sub> a – Volumetric Mass Transfer Coefficient 44
2.4	Heat Generating Aerobic Processes 46

viii	Contents	
	2.5	Product Recovery 49
	2.5.1	Basics 49
	2.5.2	In Situ Product Recovery (ISPR) 49
	2.6	Modeling and Simulation of Reactor Behavior 51
	2.6.1	Basic Approaches and Software 51
	2.6.2	Numerical Simulation of Bioreactor Function 51
	2.6.3	Contamination of Bioreactors 52
	2.7	Scale-up 53
		References 54
		Further Reading 57
	3	Food 59
		Gülhan Ünlü and Barbara Nielsen
	3.1	Fermented Foods 59
	3.1.1	Food Preservation 59
	3.1.2	Flavor and Texture 60
	3.1.3	Health Benefits 60
	3.1.4	Economic Impact 62
	3.2	Microorganisms and Metabolism 62
	3.2.1	Fermentation Processes 64
	3.2.2	Starter Cultures 65
	3.3	Yeast Fermentations – Industrial Application of Saccharomyces
		Species 65
	3.3.1	Grain Fermentation for Ethanol Production – Beer 66
	3.3.2	Grain Fermentation for CO <sub>2</sub> Production – Bread 69
	3.3.2.1	Yeast Preparation 69
	3.3.3	Fruit Fermentation – Wines and Ciders 71
	3.4	Vinegar – Incomplete Ethanol Oxidation by Acetic Acid Bacteria Suc
	3.4.1	as <i>Gluconobacter oxydans</i> 75 Substrates: Wine, Cider, and Malt 75
	3.4.2	
	3.4.3	P. I. C. I.
	3.5	Balsamic and Other Specialty Vinegars 77  Bacterial and Mixed Fermentations – Industrial Application of Lactic
	0.0	Acid Bacteria, With or Without Yeast or Molds 78
	3.5.1	Milk – Cultured Milks – Buttermilk, Yogurt, Kefir, and Cheese 78
	3.5.1.1	Bacteriophage Contamination – Death of a Culture 81
	3.5.2	Meats – Sausages, Fish Sauces, and Pastes 82
	3.5.3	Vegetables – Sauerkrauts and Pickles, Olives 83
	3.5.4	Grains and Legumes – Soy Sauce, Miso, Natto, and Tempeh 86
	3.5.5	Cocoa and Coffee 87
	3.6	Fungi as Food 88
	3.6.1	Mushrooms 88
	3.6.2	Single-Cell Protein – Fusarium venenatum 90
	3.7	Conclusions and Outlook 91
		References 92
		Further Reading 92

4	Technical Alcohols and Ketones 95
	Peter Dürre
4.1	Introduction 95
4.2	Ethanol Synthesis by Saccharomyces cerevisiae and Clostridium
	autoethanogenum 97
4.2.1	Application 97
4.2.2	Metabolic Pathways and Regulation 97
4.2.3	Production Strains 98
4.2.4	Production Processes 98
4.2.5	Ethanol – Fuel of the Future? 100
4.2.6	Alternative Substrates for Ethanol Fermentation by Cellulolytic
	Bacteria and Clostridium autoethanogenum 100
4.3	1,3-Propanediol Synthesis by Escherichia coli 101
4.3.1	Application 101
4.3.2	Metabolic Pathways and Regulation 102
4.3.3	Production Strains 102
4.3.4	Production Processes 104
4.4	Butanol and Isobutanol Synthesis by Clostridia and Yeast 105
4.4.1	History of Acetone-Butanol-Ethanol (ABE) Fermentation by
	Clostridium acetobutylicum and C. beijerinckii 105
4.4.2	Application 106
4.4.3	Metabolic Pathways and Regulation 107
4.4.4	Production Strains 110
4.4.5	Production Processes 110
4.4.6	Product Toxicity 113
4.5	Acetone Synthesis by Solventogenic Clostridia 113
4.5.1	Application 113
4.5.2	Metabolic Pathways and Regulation 113
4.5.3	Production Strains 114
4.5.4	Production Processes 114
4.6	Outlook 115
	Further Reading 115
	Figure 1 and
5	Organic Acids 117
- 1	Michael Sauer and Diethard Mattanovich
5.1	Introduction 117
5.2	Citric Acid 119
5.2.1	Economic Impact and Applications 120
5.2.2	Biochemistry of Citric Acid Accumulation 120
5.2.3	Industrial Production by the Filamentous Fungus Aspergillus
F 2 4	niger 122
5.2.4	Yarrowia lipolytica: A Yeast as an Alternative Production
5.2	Platform 123
5.3	Lactic Acid 124
5.3.1 5.3.2	Economic Impact and Applications 124
	Anaerobic Bacterial Metabolism Generating Lactic Acid 125
5.3.3	Lactic Acid Production by Bacteria 125

x	Contents	
·	5.3.4	Lactic Acid Production by Yeasts 126
	5.4	Gluconic Acid 127
	5.4.1	Economic Impact and Applications 127
	5.4.2	Extracellular Biotransformation of Glucose to Gluconic Acid by
		Aspergillus niger 128
	5.4.3	Production of Gluconic Acid by Bacteria 129
	5.5	Succinic Acid 129
	5.5.1	Economic Impact and Applications 130
	5.5.2	Pilot Plants for Anaerobic or Aerobic Microbes 130
	5.6	Itaconic Acid 132
	5.6.1	Economic Impact and Applications 132
	5.6.2	Decarboxylation as a Driver in Itaconic Acid Accumulation 132
	5.6.3	Production Process by Aspergillus terreus 132
	5.6.4	Metabolic Engineering for Itaconic Acid Production 132
	5.7	Downstream Options for Organic Acids 134
	5.8	Perspectives 135
	5.8.1	Targeting Acrylic Acid – Microbes Can Replace Chemical Process
		Engineering 136
	5.8.2	Lignocellulose-Based Biorefineries 136
		Further Reading 137
	6	Amino Acids 139
		Lothar Eggeling
	6.1	Introduction 139
	6.1.1	Importance and Areas of Application 139
	6.1.2	Amino Acids in the Feed Industry 140
	6.1.3	Economic Significance 141
	6.2	Production of Amino Acids 142
	6.2.1	Conventional Development of Production Strains 142
	6.2.2	Advanced Development of Production Strains 144
	6.3	L-Glutamate Synthesis by Corynebacterium glutamicum 145
	6.3.1	Synthesis Pathway and Regulation 145
	6.3.2	Production Process 148
	6.4	L-Lysine 148
	6.4.1	Synthesis Pathway and Regulation 148
	6.4.2	Production Strains 150
	6.4.3	Production Process 152
	6.5	L-Threonine Synthesis by Escherichia coli 153
	6.5.1	Synthesis Pathway and Regulation 153
	6.5.2	Production Strains 154
	6.5.3	Production Process 155
	6.6	L-Phenylalanine 155
	6.6.1	Synthesis Pathway and Regulation 155
	6.6.2	Production Strains 156
	663	Production Process 157

6.7

Outlook 158

Further Reading 159

Klaus-Peter Stahmann and Hans-Peter Hohmann Application and Economic Impact 161  1Ascorbic Acid (Vitamin C) 163  Biochemical Significance, Application, and Biosynthesis 163  Regioselective Oxidation with Bacteria in the Production Process 16- Riboflavin (Vitamin B₂) 166  Significance as a Precursor for Coenzymes and as a Pigment 166  Biosynthesis by Fungi and Bacteria 167  Production by Ashbya gossypii 168  Production by Bacillus subtilis 171  Downstream Processing and Environmental Compatibility 173  Cobalamin (Vitamin B₁₂) 174  Physiological Relevance 174  Biosynthesis 176  Production with Pseudomonas denitrificans 176  Purine Nucleotides 178  Impact as Flavor Enhancer 178  Development of Production Strains 178  Production of Inosine or Guanosine with Subsequent Phosphorylation 179  β-Carotene 180  Physiological Impact and Application 180  Production with Blakeslea trispora 181  Further Reading 183  Antibiotics and Pharmacologically Active Compounds 185  Lei Fang, Guojian Zhang, and Blaine A. Pfeifer  Microbial Substances Active Against Infectious Disease Agents or Affecting Human Cells 185  Distribution and Impacts 185  Diversity of Antibiotics Produced by Bacteria and Fungi 189  β-Lactams 190  B-Lactams 190  β-Lactams 190  β-Lactam Biosynthesis 190  Penicillin Production by Penicillium chrysogenum 193  Lipopeptides 193  Lipopeptide Biosynthesis 194  Daptomycin Production by Acremonium chrysogenum 193  Lipopeptide Biosynthesis 194  Daptomycin Production by Streptomyces roseosporus 194  Cyclosporine Production by Tolypocladium inflatum 194  Macrolides 197  Macrolide Biosynthesis 197	7	Vitamins, Nucleotides, and Carotenoids 161
