ABBREVIATIONS	13
PREFACE	17
INTRODUCTION	19
Chapter 1 MICROBIAL TECHNOLOGY	21
Chapter 2 ERGOT ALKALOIDS	28
2.1 Historical background	28
2.2 Chemistry	30
2.2.1 Clavines	31
2.2.2 Lysergic acid and its simple derivatives	38
2.2.3 Ergopeptines	41
2.2.3.1 Molecular flexibility	45
2.2.4 New alkaloids	48
2.3 Sources and production	51
2.3.1 Parasitic production	54
2.3.2 Saprophytic production	56
2.3.3 Synthetic production*	59
2.4 Isolation	60
2.4.1 Assay	61
2.4.1.1 Titration with perchloric acid	61
2.4.1.2 Colour reaction	62
2.4.1.3 UV and IR spectroscopy	62
2.4.1.4 Fluorescence spectroscopy	63
2.4.1.5 Mass spectrometry	64
2.4.1.6 Chromatographic methods	64
2.4.1.7 X-Ray crystal structure analysis	65
2.4.1.8 Identification of paspalic acid	65
2.4.2 Recovery	66
2.5 Biological activities and therapeutic applications	68
2.5.1 Psychogeriatry	74
2.5.2 Reproduction processes	74
2.5.3 Peripheral and cerebral circulation disorders	75
2.5.4 Neuro-hormonal activities	76

2.5.5	Antibacterial effect	77
2.5.6	Microcirculation	78
2.5.7	Dopamine receptors	78
2.5.8	Parkinsonian syndromes	80
2.5.9	Antitumor effect	82
2.5.10	Inhibitory effect on antibody formation	84
2.5.11	Structure-activity relationship	86
Chapter 3	BIOLOGY OF <i>Claviceps</i>	87
3.1	Parasitic cultures	90
3.1.1	Host plants	90
3.1.2	Biological cycle	91
3.1.3	Pigments	95
3.1.4	Bioelements	96
3.2	Saprophytic cultures	96
3.2.1	Hyphal morphology, structure and organization	98
3.2.2	Sclerotia-like cells	100
3.2.3	Micro- and macroconidia	102
3.2.4	Microcycle conidiation	104
3.2.5	Ageing	105
3.2.6	Cellular mass	107
3.2.7	Cell walls	107
3.2.8	Oleosomes	108
3.2.9	Hyaloplasm	109
3.2.10	Nucleus	109
3.2.11	Mithramycin staining	111
3.2.12	Cell genome	112
3.2.13	Mitochondria	115
3.2.14	Endoplasmic reticulum	118
3.2.15	Cytoskeleton	118
3.2.16	Glucolytic pathways	120
3.2.17	Feedforward regulation	123
Chapter 4	ALKALOID BIOSYNTHESIS	125
4.1	Precursors	125
4.2	Pathway intermediates	129
4.3	Locale of biosynthesis and storage	136
4.4	Catabolism and degradation of alkaloids	137
Chapter 5	PHYSIOLOGY OF FORMATION	138
5.1	Genetic aspects	140
5.1.1	Clock genetics	143
5.2	Biocatalysis	144
5.2.1	Ergot alkaloid enzymes	146
5.2.1.1	Isopentenyl pyrophosphate isomerase	147
5.2.1.2	Dimethylallyltryptophan synthetase	148
5.2.1.3	Dimethylallyltryptophan N-methyltransferase	149
5.2.1.4	Chanoclavine cyclase	150
5.2.1.5	Agroclavine hydroxylase	150

5.2.1.6	Cytochrome P-450	151
5.2.1.7	D-Lysergic acid-activating enzyme	153
5.2.1.8	Ergopeptine synthetase	155
5.2.2	Redox potential	157
5.3	Thermodynamics	158
5.4	Cell differentiation	161
5.4.1	Conidiation and germination	164
5.4.2	Sclerotia-like growth	170
5.4.3	Growth and production phases	172
5.4.4	Heterokaryosis	174
5.5	Related metabolism	175
5.5.1	Tryptophan	176
5.5.1.1	Transport and accumulation	177
5.5.1.2	Metabolism	178
5.5.1.3	Tryptophan-histidine cross pathway	180
5.5.1.4	Phases	181
5.5.1.5	Tryptophan as inducer	183
5.5.1.6	Regulatory mechanism	186
5.5.2	Mevalonic acid	188
5.5.2.1	Hydroxymethylglutaryl-CoA reductase	189
5.5.3	Protein turnover	192
5.5.4	Water stress and proline	194
5.5.5	Carbohydrates	196
5.5.5.1	Trehalose	200
5.5.5.2	Glucans	201
5.5.5.3	Polysaccharide deposition	202
5.5.6	Fatty acids	203
5.5.7	Lipids and sterols	204
5.6	Role of alkaloids in the life system of <i>Claviceps</i>	206
Chapter 6 REGULATION		211
6.1	Channelling and compartmentation	212
6.2	Cultivation design	215
6.2.1	Substrates	216
6.2.1.1	Water	216
6.2.1.2	Carbon sources	217
6.2.1.3	Nitrogen sources	219
6.2.1.4	Phosphorus, trace elements	221
6.2.1.5	Antifoam agents	221
6.2.1.6	Cultivation media	221
6.2.2	Temperature	223
6.2.3	Aeration	224
6.3	Physiological manipulation	225
6.3.1	The nexus of metabolism	225
6.3.1.1	Cell-pool ATP	227
6.3.1.2	Tricarboxylic acid and glyoxylate cycles	228
6.3.1.3	Citrate	232
6.3.1.4	Sucrose	233
6.3.1.5	Inorganic phosphate	234

6.3.1.5.1	Phosphatases	235
6.3.1.6	Surface-active agents	236
6.3.1.7	Alkaloid as end-product	237
6.3.2	Kinetic factor	238
6.3.3	Oxidative modification of enzymes	240
6.4	Mutation	240
6.4.1	Induction	241
6.4.2	Mutation in <i>Claviceps</i> strains	242
6.4.3	Mutagenesis in protoplasts	244
6.4.4	Selection of mutants	246
6.5	Genetic engineering	247
6.5.1	Secondary metabolites	250
6.5.2	Gene recombination	251
6.5.3	Gene amplification	253
6.5.4	Transposition	254
6.5.5	Fungal cloning vectors	255
6.6	Cell-free biosynthesis	257
6.6.1	Preparation of protoplasts	258
6.6.2	Protoplast vacuoles	259
6.6.3	Alkaloid formation	260
6.7	Semi-continuous fermentation	262
6.7.1	Immobilization techniques	262
6.7.1.1	Calcium alginate	264
6.7.1.2	Resonance technique	266
6.7.1.3	Co-immobilization	266
6.7.2	Immobilized living cells	267
6.7.2.1	Biochemical activity	267
6.7.2.2	Morphology and ultrastructure	269
6.7.2.3	Production capacity	271
6.7.2.4	Protection against contamination	273
6.8	Biotransformation	273
6.9	Mixed cultures	278
6.10	Chaos	279
Chapter 7 INDUSTRIAL ASPECTS		281
7.1	Ergot strains	281
7.1.1	Isolation and screening	281
7.1.2	Improvement	284
7.1.3	Production strains	289
7.1.4	Degeneration	289
7.1.5	Maintenance and preservation	291
7.2	Scaling up	293
7.2.1	Rheology	297
7.2.2	Bioreactor design	299
7.2.2.1	Power input and oxygen transfer	300
7.2.2.2	Mixing	301
7.2.2.3	Heat transfer	302
7.2.2.4	Liquid shear	302
7.2.3	Computer technology	303

7.2.4	Stationary fermentation in plastic cushions	306
7.2.5	Solid substrate fermentation	308
7.3	Processing and cost engineering	310
7.4	Patent systems	313
7.4.1	Biotechnological patents	316
7.5	Research and innovation management	316
7.5.1	Innovation	317
7.5.2	Education	318
7.5.3	Information	319
7.5.4	New research methodologies	320
7.5.5	Management	323
Chapter 8	FUTURE PROSPECTS	324
Chapter 9	CONCLUSIONS	332
	REFERENCES	338
	SUBJECT INDEX	361
	AUTHOR INDEX	376
