

# INTRODUCING PALAEOLOGY

## A GUIDE TO ANCIENT LIFE

### SECOND EDITION

With illustrations by John Murray

Life on Earth can be traced back over three billion years into the past. Many examples of the Earth's former inhabitants are to be found in rocks, preserved as beautiful and fascinating fossils. The earliest life forms were bacteria and algae: these produced the oxygen that enabled more complex life forms to develop. About 600 million years ago multi-cellular organisms appeared on Earth, some of which could protect themselves with hard parts such as shells.

Many of these life forms were readily fossilized and are used to subdivide geological time. Numerous species have evolved and most are now extinct. Lineages can be traced and extinctions explained as a consequence of terrestrial and extra-terrestrial events.

Now in a revised, updated and expanded Second Edition *Introducing Palaeontology* will continue to provide readers with a concise and accessible introduction to the science of palaeontology.

'*Introducing Palaeontology* is an excellent book, full of attractive diagrams and photographs, coupled with short, waffle-free sections. The combination of short, snappy chapters and interesting scientific concepts create a book that is perfect for anyone new to the science of palaeontology, whether they be an enthusiastic amateur, a prospective student or an undergraduate just starting out in the field.' *Geological Magazine* review of the first edition.

**Patrick N. Wyse Jackson** is an Associate Professor in Geology and Curator of the Geological Museum at Trinity College, Dublin. He has been fascinated by fossil bryozoans for many years, and also investigates aspects of the history of geology.

## **Part 1: The science of palaeontology**

<b>1.1</b>	Preface: the fascination of fossils	2
<b>1.2</b>	A chancy business: the preservation of fossils	5
<b>1.3</b>	From the field to the laboratory: how to collect, curate, study and image fossils	10
<b>1.4</b>	Code of conduct for fossil collectors	18
<b>1.5</b>	Taxonomy: how to classify and identify fossils	20
<b>1.6</b>	Uses of fossils	23
1.6.1	Palaeobiological history of life on Earth	23
1.6.2	Evolution and extinctions	29
1.6.3	Interpretation of ancient environments and climates	34
1.6.4	Biostratigraphy and the concept of zone fossils	38
1.6.5	Development of the geological timescale	42
<b>1.7</b>	Fossil Lagerstätten: exceptional preservation of fossils	44
<b>1.8</b>	Colour in fossils	53
<b>1.9</b>	Early ideas on the nature and significance of fossils	55

## **Part 2: Fossil groups**

<b>2.1</b>	Algae and vascular plants	60
<b>2.2</b>	Unicellular animals: Foraminifera and Radiolarians	66
<b>2.3</b>	Sponges	69
<b>2.4</b>	Cnidaria	72
<b>2.5</b>	Bryozoans	76

<b>2.6</b>	Molluscs	80
2.6.1	Cephalopods	81
2.6.2	Gastropods	86
2.6.3	Bivalves	88
2.6.4	Other Molluscs	90
<b>2.7</b>	Brachiopoda	93
<b>2.8</b>	Echinodermata	96
2.8.1	Echinoids and Edrioasteroids	97
2.8.2	Crinoids and Blastoids	100
2.8.3	Starfish, Brittlestars and Homalozoans	103
<b>2.9</b>	Arthropods	105
2.9.1	Trilobites	105
2.9.2	Crustaceans (Crabs, Shrimps and Ostracods)	109
2.9.3	Chelicerates (Horseshoe Crabs, Eurypterids and Spiders)	111
2.9.4	Myriapods	112
2.9.5	Insects	113
<b>2.10</b>	Graptolites	114
<b>2.11</b>	Conodonts	118
<b>2.12</b>	Fishes	121
<b>2.13</b>	Tetrapods and Amphibians	125
<b>2.14</b>	Reptiles	128
<b>2.15</b>	Birds	134
<b>2.16</b>	Mammals	136
<b>2.17</b>	Hominids and Hominins	139
<b>2.18</b>	Trace Fossils	143
	Glossary	147
