I PLENARY LECTURES

1	Roger Penrose—A Personal Appreciation	3
	<i>Michael Atiyah</i>	
1	Personal and historical remarks	3
2	Twistors	4
3	Integrable systems and solitons	5
4	Rival philosophies	5
5	Other topics	6
6	Conclusion	6
	Bibliography	7
2	Hypercomplex Manifolds and the Space of Framings	9
	<i>Nigel Hitchin</i>	
1	Introduction	9
2	Framings	10
3	$SU(2)$ -invariance	13
4	Hypercomplex manifolds	14
5	Twistor spaces and isomonodromic deformations	20
6	Holonomy and hypergeometric functions	24
	Bibliography	29
3	Gauge Theory in Higher Dimensions	31
	<i>S. K. Donaldson and R. P. Thomas</i>	
1	Introduction	31
2	The familiar theory	31
3	The complex analogy	33
4	Exceptional holonomy	37
5	The two-dimensional picture	38
6	Adiabatic limits and dimension reduction	40
7	An example: quadrics in P^5	42
8	Vanishing cycles and pseudoholomorphic curves	43
9	Submanifolds	45
	Bibliography	47

4	Noncommutative Differential Geometry and the Structure of Space–Time	49
	<i>Alain Connes</i>	
	Foreword	49
1	Generalities	49
2	Infinitesimal calculus	54
3	The local index formula and the transverse fundamental class	64
4	The notion of manifold and the axioms of geometry	69
5	The spectral geometry of space–time	75
	Bibliography	78
5	Einstein’s Equation and Conformal Structure	81
	<i>Helmut Friedrich</i>	
1	Introduction	81
2	Asymptotic simplicity and conformal Einstein equations	82
3	De Sitter-type space–times	84
4	Anti-de Sitter-type space–times	84
5	Minkowski-type space–times	86
5.1	Conformal Minkowski space	86
5.2	Some existence results	87
5.3	Difficulties	88
5.4	Assumptions on the data	89
5.5	Gauge conditions and conformal field equations	90
5.6	The finite regular initial value problem near space-like infinity	91
5.7	The total characteristic at space-like infinity	92
5.8	Comments on our procedure	93
6	Concluding remarks	94
	Bibliography	97
6	Twistors, Geometry, and Integrable Systems	99
	<i>R. S. Ward</i>	
1	Introduction	99
2	Twistors for 3-dimensional space-time	99
3	An integrable Yang–Mills–Higgs system	101
4	SU(2) bundles over \overline{T}	103
5	Soliton solutions	104
6	Concluding remarks	106
	Bibliography	107
7	On Four-Dimensional Einstein Manifolds	109
	<i>Claude LeBrun</i>	
1	Introduction	109

2	The curvature of 4-manifolds	110
3	The Hitchin–Thorpe inequality	111
4	Recent results	113
5	Seiberg–Witten techniques	114
6	Entropy inequalities	117
7	Concluding remarks	120
	Bibliography	120
8	Loss of Information in Black Holes	123
	<i>Stephen Hawking</i>	
1	Personal and historical remarks	123
2	Information loss	124
9	Funda-mental Geometry: the Penrose–Hameroff ‘Orch OR’ Model of Consciousness	135
	<i>Stuart Hameroff</i>	
1	Introduction: on the trail of an enigma	135
2	Philosophy: a panexperiential ‘funda-mentality’	135
3	Physics: objective reduction (OR)	138
4	Biology: quantum coherence in microtubules?	140
4.1	Microtubules	140
4.2	Fröhlich’s biological coherence	141
4.3	Quantum isolation—avoiding environmental interaction and decoherence	142
4.4	Macroscopic quantum coherence and gap junctions	144
4.5	Evolution, Orch OR and the Cambrian explosion	146
5	Summary of the ‘Orch OR’ model of consciousness	150
6	Assumptions and testable predictions of Orch OR	152
7	Conclusion: Penrose’s Platonic world	154
	Bibliography	155
10	Implications of Transience for Spacetime Structure	161
	<i>Abner Shimony</i>	
	Bibliography	170
11	Geometric Issues in Quantum Gravity	173
	<i>Abhay Ashtekar</i>	
1	Introduction	173
1.1	Setting the stage	173
1.2	Quantum geometry	175
2	Quantum states	177
2.1	Phase space	177
2.2	Quantum configuration space	178
2.3	Kinematical Hilbert space	180

3	Quantum geometry	182
3.1	Preliminaries	182
3.2	Triad operators	183
3.3	Area operators	185
3.4	Properties of area operators	187
4	Discussion	189
	Acknowledgements	192
	Bibliography	192
12	From Quantum Code-making to Quantum Code-breaking	195
	<i>Artur Ekert</i>	
1	What is wrong with classical cryptography?	195
2	Is the Bell theorem of any practical use?	197
3	Quantum key distribution	199
4	Quantum eavesdropping	201
5	Public key cryptosystems	203
6	Fast and slow algorithms	205
7	Quantum computers	206
8	Quantum code-breaking	209
9	Concluding remarks	211
	Bibliography	212
13	Penrose Tilings and Quasicrystals Revisited	215
	<i>Paul J. Steinhardt</i>	
1	Introduction	215
2	New approach to Penrose tiling: single tile/matching rule	218
3	New approach to Penrose tiling: maximizing cluster density	220
4	Implications	223
	Bibliography	225
14	Decaying Neutrinos and the Geometry of the Universe	227
	<i>D. W. Sciama</i>	
1	Introduction	227
2	Relic neutrinos as dark matter	228
3	Decaying neutrinos and the ionisation of the universe	230
4	A new observational test of the decaying neutrino theory	232
	Bibliography	233
15	Quantum Geometric Origin of All Forces in String Theory	235
	<i>Gabriele Veneziano</i>	

1	Introduction	235
2	Forces and local symmetries	235
3	Field-theoretic Kaluza–Klein	236
4	Quantum string magic	238
5	String-theoretic Kaluza–Klein	240
6	S-duality and the big fix	241
	Bibliography	243
16	Space from the Point of View of Loop Groups	245
	<i>Graeme Segal</i>	
1	Loop groups and quantum field theory	246
2	Loop groups and low-dimensional topology	249
3	String theory	250
	Bibliography	252
 II PARALLEL SESSION I: QUANTUM THEORY AND BEYOND		
17	The Twistor Diagram Programme	257
	<i>Andrew P. Hodges</i>	
	Bibliography	262
18	Geometric Models for Quantum Statistical Inference	265
	<i>Dorje C. Brody and Lane P. Hughston</i>	
1	Introduction	265
2	Information geometry	266
3	Classical estimation	269
4	Quantum geometry	270
5	Quantum statistical estimation	271
6	Higher order variance bounds	272
7	Quantum geometry vs information geometry	274
	Bibliography	274
19	Spin Networks and Topology	277
	<i>Louis H. Kauffman</i>	
1	Introduction	277
2	Networks and discrete space	277
3	The bracket state summation and the Jones polynomial	278
	3.1 The Reidemeister moves	279
4	Spin networks	282
	Bibliography	287
20	The Physics of Spin Networks	291
	<i>Lee Smolin</i>	
1	Introduction	291
2	Spin networks in non-perturbative quantum gravity	292

3	Future directions	299
	Bibliography	301
III PARALLEL SESSION II: GEOMETRY AND GRAVITY		
21	The Sen Conjecture for Distinct Fundamental Monopoles	307
	<i>Gary Gibbons</i>	
1	Introduction	307
2	<i>S</i> -duality	308
3	Weak \leftrightarrow strong coupling	308
4	Bound states at threshold	309
5	The moduli space	309
6	Harmonic forms	312
7	Uniqueness	313
8	Geodesics	314
9	Bound states in the continuum	315
	Bibliography	315
22	An Unorthodox View of GR via Characteristic Surfaces	317
	<i>Simonetta Frittelli, E. T. Newman, and Carlos Kozameh</i>	
1	Introduction	317
2	The null surface formulation of GR	319
2.1	Kinematics	319
2.2	Imposing the Einstein equations	319
2.3	Self-dual Einstein equations	320
2.4	Asymptotically flat GR	321
3	Discussion and applications	322
	Bibliography	323
23	Amalgamated Codazzi–Raychaudhuri Identity for Foliation	325
	<i>Brandon Carter</i>	
1	Introduction	325
2	The deformation tensor	328
3	The adapted foliation connection	330
4	The amalgamated foliation curvature tensor	331
	Bibliography	334
24	Abstract/Virtual/Reality/Complexity	337
	<i>George Sparling</i>	
1	Introduction	337
2	Complexity	338
3	Reality	340

4	Abstract	342
5	Virtual	343
	Bibliography	345

IV PARALLEL SESSION III: FUNDAMENTAL QUESTIONS IN QUANTUM MECHANICS

25	Interaction-Free Measurements	349
	<i>Lev Vaidman</i>	349
1	The Penrose bomb testing problem	349
2	The Elitzur–Vaidman bomb testing problem	351
3	Experimental realization of the IFM	352
4	Generalized IFM	353
5	Applications of the IFM	354
6	The IFM as counterfactuals	354
	Bibliography	355
26	Quantum Measurement Problem and the Gravitational Field	357
	<i>Jeeva Anandan</i>	
1	Introduction	357
2	Quantum measurement problem	358
3	Efforts to resolve the measurement problem	360
4	Gravitational reduction of the wave packet	363
	Bibliography	367
27	Entanglement and Quantum Computation	369
	<i>Richard Jozsa</i>	
1	Introduction	369
2	Quantum computation and complexity	370
3	Superposition and entanglement in quantum computation	373
4	Entanglement and the super-fast quantum Fourier transform	376
5	Concluding remarks	377
	Bibliography	378

V PARALLEL SESSION IV: MATHEMATICAL ASPECTS OF TWISTOR THEORY

28	Penrose Transform for Flag Domains	383
	<i>Simon Gindikin</i>	
1	The Penrose transform in formulas	383
1.1	Twistor geometry	383
1.2	Penrose transform	384

1.3	Inverse Penrose transform	385
1.4	Holomorphic cohomology	385
1.5	Boundary integral formula	386
2	Generalized Penrose transform (geometrical problems)	386
2.1	Holomorphic cohomology	386
2.2	Flag domains	387
2.3	Dual manifolds	388
2.4	Basic conjectures	389
3	Generalized Penrose transform (analytic problems)	390
	Bibliography	392
29	Twistor Solution of the Holonomy Problem	395
	<i>S.A. Merkulov and L.J. Schwachhöfer</i>	
1	Introduction	395
2	Main result	395
3	Twistor theory of holonomy groups	397
	Bibliography	401
30	The Penrose Transform and Real Integral Geometry	403
	<i>Toby N. Bailey</i>	
1	Introduction	403
2	The twistor programme	403
3	The holomorphic Penrose transform	404
4	The connection with integral geometry	405
5	A new method in real integral geometry	406
5.1	Pull-back from $\mathbb{R}P_3$ to F	406
5.2	Push-down from F to $\text{Gr}_2(\mathbb{R}^4)$	407
5.3	Results	408
	Bibliography	409
31	Pythagorean Spinors and Penrose Twistors	411
	<i>Andrzej Trautman</i>	
1	Introduction	411
2	Pythagorean spinors	411
3	Projective quadrics and twistors	413
3.1	The complex case	414
3.2	The real case	417
	Bibliography	418
VI AFTERWORD		
32	Afterword	423
	<i>Roger Penrose</i>	
1	Geometry, and the roots and aims of twistor theory	423
2	Towards a twistor description of Einsteinian physics	424
3	Further issues of physics and biology	429
