

A-LEVEL GEOGRAPHY TOPIC MASTER

THE WATER AND CARBON CYCLES

Master the in-depth knowledge and higher-level skills that A-level Geography students need to succeed.

Blending detailed content and case studies with questions, exemplars and guidance, this focused topic book:

- Significantly improves your knowledge and understanding of A-level content and concepts, extending learning far beyond your course textbooks
- Strengthens your analytical and interpretative skills through questions that involve a range of geographical data sources, with guidance on how to approach each task
- Demonstrates how to evaluate issues, with a section in every chapter that shows how to think geographically, consider relevant evidence and structure a balanced essay
- Provides everything you need to excel, from case studies and definitions of key terms, to suggestions for further research and fieldwork ideas for the Independent Investigation
- Helps you to check, apply and consolidate your learning, using end-of-chapter refresher questions and discussion points

Authors

Dr Andrew Davis is Head of Environmental Science at St Edward's School, Oxford. He has written many textbooks on Environmental Science, and is a Fellow of the Royal Geographical Society, London.

Dr Garrett Nagle has over thirty years' experience of teaching Geography and Environmental Systems. He is a former Assistant Principal Examiner and Deputy Chief Examiner.

Series editor

Simon Oakes has worked as a Chief Examiner and curriculum designer across a range of Geography qualifications, including A-level and IB Diploma.

Consultant

This book has been reviewed by Martin Evans who is Professor of Geomorphology at The University of Manchester. He was chair of the A-level Content Advisory Board which determined the content of the A-level specifications currently being taught.

This book is suitable for a variety of topics including:

- AQA: Water and Carbon Cycles
- Pearson Edexcel: The Water Cycle and Water Insecurity; The Carbon Cycle and Energy Security
- OCR: Earth's Life Support Systems
- WJEC/Eduqas: Global Systems

CHAPTER 1: Systems and feedback

- 1 The systems approach 1
- 2 Equilibria and feedback 10
- 3 Evaluating the issue: to what extent do different physical systems change over time in permanent ways? 16

CHAPTER 2: Water cycle dynamics 25

- 1 The global water cycle and its stores 25
- 2 Local drainage basin dynamics 34
- 3 Urbanisation and the hydrological cycle 46
- 4 River hydrographs and river regimes 49
- 5 Evaluating the issue: how far are human and physical factors responsible for changing water cycle flows in different drainage basins? 56

CHAPTER 3: Water security and sustainable water management 64

- 1 The water budget and water deficits 64
- 2 Drought, aridity, water scarcity and water insecurity 69
- 3 Patterns and trends in water availability and consumption 76
- 4 Water challenges and sustainable solutions 83
- 5 Evaluating the issue: to what extent can water security ever be guaranteed in water-scarce places? 93

CHAPTER 4: Carbon cycle dynamics 99

- 1 The global carbon cycle and its stores 99
- 2 Carbon flows and processes 102
- 3 Carbon cycling at the local scale 111
- 4 Evaluating the issue: assessing the spatial and temporal variability of carbon system flows 118

CHAPTER 5: Fossil fuel use and the implications of climate change 126

- 1 Energy security and fossil fuel use trends and patterns 126
- 2 Anthropogenic and natural climate change 139
- 3 Implications of climate change for physical systems and life on Earth 14
- 4 Evaluating the issue: to what extent have human impacts on the carbon cycle led to a new geological epoch, the Anthropocene? 149

CHAPTER 6: Climate change mitigation and adaptation 156

- 1 The decarbonisation of economic activity and renewable energy 156
- 2 Carbon capture and storage 17
- 3 Climate change adaptation and resilience 175
- 4 Evaluating the issue: to what extent is a warmer world inevitable? 17

CHAPTER 7: Carbon and water cycle interrelationships 187

- 1 Investigating local-scale carbon and water interrelationships 18
- 2 Amazonian carbon and water cycles: connections and changes 19
- 3 Investigating the Arctic tundra 20

CHAPTER 8: Study guides 212

- 1 AQA A-level geography: Water and carbon cycles 21
- 2 Edexcel A-level geography: Physical systems and sustainability 21
- 3 OCR A-level geography: Earth's life support systems 21
- 4 WJEC and Eduqas A-level geography: Global systems (water and carbon cycles) 22
