

TABLE OF CONTENTS

1	SIGNIFICANCE AND MOTIVATIONS OF THE THESIS	5
2	DESIGN OF 800 V GALVANICALLY ISOLATED TRANSLATOR	7
2.1	Galvanically Isolated Translator.....	7
2.2	Physical test structures	8
2.2.1	Receiver Outputting Analog Signal.....	9
2.2.2	Transmitter Generating Pulse Bursts.....	9
2.2.3	Capacitor Value Skews of the Coupled Resonators.....	9
2.2.4	Reduced Transmission Line	9
2.2.5	Evaluation of the Test Structures.....	11
2.3	Communication through the Isolator.....	13
2.3.1	ON-OFF Keying Digital Modulation	13
2.3.2	Pulse Width Modulation.....	13
2.4	Results and Discussion	15
3	DESIGN OF 800 v GALVANICALLY ISOLATED HALF BRIDGE DRIVER FOR INDUSTRIAL APPLICATIONS	16
3.1	Communication through the Isolator	16
3.2	Low Voltage Die	17
3.2.1	Transmitter with Oscillator.....	17
3.2.2	Transmitter Power Supply	17
3.2.3	Transmitter Logic	17
3.2.4	Voltage Reference and Under-Voltage Lock-Out (UVLO)	18
3.2.5	ESD Protection	18
3.2.6	Output Driver.....	18
3.3	High Voltage Die.....	18
3.3.1	Receiver with Discriminator.....	19
3.4	Evaluation of the Half Bridge Driver	19
3.4.1	Input to Output Propagation Delay.....	20
3.4.2	Gate Driver Current Capability	21
3.4.3	Common Mode Transient Immunity	21
3.4.4	LLC Resonant Converter Application.....	22
3.4.5	Current Consumption	23
3.5	Results and Discussion	23

4	DESIGN OF GALVANICALLY ISOLATED TRANSLATOR FOR HV APPLICATIONS	24
4.1	Transformer Design.....	24
4.2	Fabrication Process.....	25
4.3	Communication through the Isolator.....	25
4.4	Bidirectional Digital Galvanic Isolator.....	25
4.4.1	UWB Transmitter	26
4.4.2	UWB Receiver.....	26
4.4.3	Blanking Circuit	26
4.4.4	Evaluation of the Bidirectional Digital Galvanic Isolator.....	27
4.4.5	Results and Discussion	29
4.5	Analog Galvanic Isolator.....	30
4.5.1	Low Voltage Die	30
4.5.2	Operational Transconductance Amplifier and Modulator.....	30
4.5.3	High Voltage Die.....	31
4.5.4	Demodulator	31
4.5.5	Evaluation of the Analog Galvanic Isolator	31
4.5.6	Results and Discussion	33
5	CONCLUSION	34
6	BIBLIOGRAPHY	36
