

1	CURRICULUM VITAE OF THE AUTHOR.....	4
2	INTRODUCTION AND MOTIVATION .....	5
3	KEY CONCEPTS .....	5
3.1	Organic thin film photovoltaics .....	5
3.2	Artificial neuromodulation and its applications.....	6
3.3	Electrochemistry: double layer formation and the oxygen reduction reaction.....	7
4	SCIENTIFIC NARRATIVE OF THE INCLUDED PAPERS .....	8
4.1	Photocapacitive devices (Papers 1, 2, 3, 4, 5).....	8
4.1.1	<i>First-generation semiconductor/cell interface concepts</i> .....	8
4.1.2	<i>The characterization of photothermal effects</i> .....	10
4.1.3	<i>Rethinking capacitive interfaces - second generation devices</i> .....	11
4.1.4	<i>Photocapacitive stimulation of electrophysiological model systems</i> .....	12
4.1.5	<i>Understanding the fundamentals of photocapacitive coupling</i> .....	14
4.1.6	<i>Increasing the interfacial capacitance of OEPCs</i> .....	15
4.1.7	<i>Differentiation between faradaic and capacitive currents</i> .....	16
4.2	Photofaradaic devices (Papers 6, 7, 8).....	18
4.2.1	<i>Photocathodes and photoanodes in the context of organic semiconductors</i> .....	18
4.2.2	<i>Single-component organic semiconductor photocathodes for H<sub>2</sub>O<sub>2</sub> evolution</i> ....	19
4.2.3	<i>Optimized heterojunction devices for H<sub>2</sub>O<sub>2</sub> production</i> .....	21
4.2.4	<i>Photofaradaic “floating” pixels</i> .....	22
5	CONCLUSIONS AND OUTLOOK.....	23
6	LIST OF COMMENTED PAPERS.....	24
7	REFERENCES.....	25
8	ABSTRACT.....	26
