I must first express my continuing appreciation to my editors at The Guilford Press, without whom this work would be much less clear, organized, and precise. I am very grateful for their expertise, patience, and enormous efforts. Anna Brackett's organizational skill, Marie Sprayberry's attention to detail and thoroughness, and, especially, Barbara Watkins's wisdom and grace have turned this collection of words into a highly useful tool.

I must also acknowledge, with thanks, Dan Egli of Williamsport, PA, who was coauthor of the list of abbreviations in Section 28.1. With appreciation for their expertise and generosity, I am happy to give credit here to the following professionals for their contributions.

I must also gratefully acknowledge my debt to many other colleagues, from whose clearest thinking and best writings I have borrowed liberally to fill these pages. More than 250 of you have furnished the more than 100,000 words from which I have culled the thousands of unduplicated wordings incorporated here. Although you are too numerous to credit individually, please accept my gratitude and appreciation. While I have borrowed many of the words and phrases, I alone must assume responsibility for the organization and presentation of the *Clinician's Thesaurus*, whatever its merits or limitations.
