CONTENTS

About the authors x

1 INTRODUCTION 1

1.1 Introduction to the Second Edition 1
1.2 Objectives of This Book 2
1.3 Spatial Data Analysis in R 3
1.4 Chapters and Learning Arcs 4
1.5 Specific Changes to the Second Edition 5
1.6 The R Project for Statistical Computing 7
1.7 Obtaining and Running the R Software 7
1.8 The R Interface 10
1.9 Other Resources and Accompanying Website 11
References 12

2 DATA AND PLOTS 13

2.1 Introduction 13
2.2 The Basic Ingredients of R: Variables and Assignment 14
2.3 Data Types and Data Classes 16
2.4 Plots 34
2.5 Another Plot Option: `ggplot` 43
2.6 Reading, Writing, Loading and Saving Data 50
2.7 Answers to Self-Test Questions 52
Reference 54

3 BASICS OF HANDLING SPATIAL DATA IN R 55

3.1 Overview 55
3.2 Introduction to `sp` and `sf`: The `sf` Revolution 57
3.3 Reading and Writing Spatial Data 63
3.4 Mapping: An Introduction to `tmap` 66
3.5 Mapping Spatial Data Attributes 81
3.6 Simple Descriptive Statistical Analyses 98
3.7 Self-Test Questions 107
3.8 Answers to Self-Test Questions 110
References 117

4 SCRIPTING AND WRITING FUNCTIONS IN R 118

4.1 Overview 118
4.2 Introduction 119
4.3 Building Blocks for Programs 120
4.4 Writing Functions 127
4.5 Spatial Data Structures 135
4.6 `apply` Functions 137
4.7 Manipulating Data with `dplyr` 140
4.8 Answers to Self-Test Questions 143

5 USING R AS A GIS 148

5.1 Introduction 148
5.2 Spatial Intersection and Clip Operations 150
5.3 Buffers 153
5.4 Merging Spatial Features 155
5.5 Point-in-Polygon and Area Calculations 157
5.6 Creating Distance Attributes 163
5.7 Combining Spatial Datasets and Their Attributes 169
5.8 Converting between Raster and Vector 175
5.9 Introduction to Raster Analysis 182
5.10 Answers to Self-Test Questions 190
References 192

6 POINT PATTERN ANALYSIS USING R 194

6.1 Introduction 194
6.2 What is Special about Spatial? 194
6.3 Techniques for Point Patterns Using R 196
6.4 Further Uses of Kernel Density Estimation 202
6.5 Second-Order Analysis of Point Patterns 207
6.6 Looking at Marked Point Patterns 218
6.7 Interpolation of Point Patterns with Continuous Attributes 222
6.8 The Kriging Approach 235
6.9 Concluding Remarks 242
6.10 Answers to Self-Test Questions 243
References 244

7 SPATIAL ATTRIBUTE ANALYSIS WITH R 245

7.1 Introduction 245
7.2 The Pennsylvania Lung Cancer Data 246
7.3 A Visual Exploration of Autocorrelation 248
7.4 Moran's *I*: An Index of Autocorrelation 257

7.5 Spatial Autoregression 262
7.6 Calibrating Spatial Regression Models in R 263
7.7 Answer to Self-Test Question 277
References 279

8 LOCALISED SPATIAL ANALYSIS 281

8.1 Introduction 281
8.2 Setting Up the Data Used in This Chapter 282
8.3 Local Indicators of Spatial Association 283
8.4 Further Issues with the Above Analysis 286
References 289

9 R AND INTERNET DATA 290

9.1 Introduction 290
9.2 Direct Access to Data 291
9.3 Using `RCurl` 295
9.4 Working with APIs 297
9.5 Creating a Statistical 'Mashup' 303
9.6 Using Specific Packages 306
9.7 Web Scraping 310
References 315

10 EPILOGUE 316

10.1 The Future of R as a Tool for Geocomputation 316
10.2 Extensions of R as a Language 316
10.3 Improvements 'Under the Bonnet' 318
10.4 Coexistence with Other Software 319
10.5 Finally… 320
References 321

Index 322
