

In the last 40 years semi-linear elliptic equations became a central subject of study in the theory of nonlinear partial differential equations. On the one hand, the interest in this area is of a theoretical nature, due to its deep relations to other branches of mathematics, especially linear and nonlinear harmonic analysis, dynamical systems, differential geometry and probability. On the other hand, this study is of interest because of its applications. Equations of this type come up in various areas such as problems of physics and astrophysics, curvature problems in Riemannian geometry, logistic problems related for instance to population models and, most importantly, the study of branching processes and superdiffusions in the theory of probability.

The aim of this book is to present a comprehensive study of boundary value problems for linear and semi-linear second order elliptic equations with measure data. We are particularly interested in semi-linear equations with absorption. The interactions between the diffusion operator and the absorption term give rise to a large class of nonlinear phenomena in the study of which singularities and boundary trace play a central role. This book is accessible to graduate students and researchers with a background in real analysis and partial differential equations.

THE SERIES: DE GRUYTER SERIES IN NONLINEAR ANALYSIS AND APPLICATIONS

The series is devoted to the publication of high-level monographs which cover the whole spectrum of current nonlinear analysis and applications in various fields, such as optimization, control theory, systems theory, mechanics, engineering, and other sciences. One of its main objectives is to make available to the professional community expositions of results and foundations of methods that play an important role in both the theory and applications of nonlinear analysis. Contributions which are on the borderline of nonlinear analysis and related fields and which stimulate further research at the crossroads of these areas are particularly welcome.

Contents

Preface	v
1 Linear second order elliptic equations with measure data	1
1.1 Linear boundary value problems with L^1 data	1
1.2 Measure data	3
1.3 M-boundary trace	13
1.4 The Herglotz–Doob theorem	18
1.5 Subsolutions, supersolutions and Kato's inequality	20
1.6 Boundary Harnack principle	28
1.7 Notes	32
2 Nonlinear second order elliptic equations with measure data	33
2.1 Semilinear problems with L^1 data	33
2.2 Semilinear problems with bounded measure data	36
2.3 Subcritical nonlinearities	43
2.3.1 Weak L^p spaces	44
2.3.2 Continuity of \mathbb{G} and \mathbb{P} relative to L_w^p norm	47
2.3.3 Continuity of a superposition operator	48
2.3.4 Weak continuity of S_Ω^g	52
2.3.5 Weak continuity of $S_{\partial\Omega}^g$	56
2.4 The structure of \mathcal{M}^g	59
2.5 Remarks on unbounded domains	63
2.6 Notes	64
3 The boundary trace and associated boundary value problems	66
3.1 The boundary trace	66
3.1.1 Moderate solutions	66
3.1.2 Positive solutions	70
3.1.3 Unbounded domains	78
3.2 Maximal solutions	78
3.3 The boundary value problem with rough trace	81

3.4	A problem with fading absorption	87
3.4.1	The similarity transformation and an extension of the Keller–Osserman estimate	88
3.4.2	Barriers and maximal solutions	89
3.4.3	The critical exponent	94
3.4.4	The very singular solution	96
3.5	Notes	107
4	Isolated singularities	108
4.1	Universal upper bounds	108
4.1.1	The Keller–Osserman estimates	108
4.1.2	Applications to model cases	113
4.2	Isolated singularities	114
4.2.1	Removable singularities	114
4.2.2	Isolated positive singularities	116
4.2.3	Isolated signed singularities	124
4.3	Boundary singularities	130
4.3.1	Upper bounds	130
4.3.2	The half-space case	131
4.3.3	The case of a general domain	138
4.4	Boundary singularities with fading absorption	147
4.4.1	Power-type degeneracy	147
4.4.2	A strongly fading absorption	150
4.5	Miscellaneous	156
4.5.1	General results of isotropy	156
4.5.2	Isolated singularities of supersolutions	157
4.6	Notes and comments	159
5	Classical theory of maximal and large solutions	162
5.1	Maximal solutions	162
5.1.1	Global conditions	162
5.1.2	Local conditions	166
5.2	Large solutions	166
5.2.1	General nonlinearities	166
5.2.2	The power and exponential cases	171
5.3	Uniqueness of large solutions	175
5.3.1	General uniqueness results	175
5.3.2	Applications to power and exponential types of nonlinearities	182

5.4	Equations with a forcing term	184
5.4.1	Maximal and minimal large solutions	184
5.4.2	Uniqueness	188
5.5	Notes and comments	192
6	Further results on singularities and large solutions	195
6.1	Singularities	195
6.1.1	Internal singularities	195
6.1.2	Boundary singularities	205
6.2	Symmetries of large solutions	217
6.3	Sharp blow up rate of large solutions	226
6.3.1	Estimates in an annulus	227
6.3.2	Curvature secondary effects	231
6.4	Notes and comments	235
	Bibliography	239
	Index	247
