

Gain mastery over the fundamentals of radiation oncology physics! This package gives you over 60 tutorial videos (each 15–20 minutes in length) with a companion text, providing the most complete and effective introduction available. Dr. Ford has tested this approach in formal instruction for years with outstanding results. The text includes extensive problem sets for each chapter. The videos include embedded quizzes and “whiteboard” screen technology to facilitate comprehension. Together, this provides a valuable learning tool both for training purposes and as a refresher for those in practice.

Key Features

- A complete learning package for radiation oncology physics, including a full series of video tutorials with an associated textbook companion website
- Clearly drawn, simple illustrations throughout the videos and text
- Embedded quiz feature in the video tutorials for testing comprehension while viewing
- Each chapter includes problem sets (solutions available to educators)

Introduction	xvii
--------------------	------

1 Basic Physics	1
1.1 Waves and Particles	1
1.1.1 Electromagnetic Waves	1
1.1.2 Particles	1
1.1.3 Waves or Particles?	3
1.2 Atomic Structure	4
1.2.1 Structure of the Atom and Coulomb's Law	4
1.2.2 Quantum (Bohr) Model of the Atom	5
1.2.3 Quantities and Units	6
Further Reading	7
Chapter 1 Problem Sets	7
2 Nuclear Structure and Decay	9
2.1 Nuclear Structure and Energetics	9
2.1.1 Nuclear Structure and Nomenclature	9
2.1.2 Chart of Isotopes and Binding Energies	9
2.1.3 Nuclear Decay and Energy Release	11
2.1.4 Nomenclature for Isotopes	12
2.2 Nuclear Decay Schemes	12
2.2.1 Beta-Minus Decay	12
2.2.2 Beta-Plus Decay	13
2.2.3 Beta Decay: Production and Half-Life	13
2.2.4 Alpha Decay	15
2.2.5 Other Decay Modes	15
Further Reading	17
Chapter 2 Problem Sets	17
3 Mathematics of Nuclear Decay	21
3.1 Exponential Decay	21
3.1.1 Introduction to Exponential Decay	21
3.1.2 Activity and Units of Activity	22
3.1.3 Half-Life	23
3.1.4 Mean-Life	24
3.2 Equilibrium of Isotopes	24
Further Reading	24
Chapter 3 Problem Sets	25
4 Brachytherapy I	27
4.1 Brachytherapy Sources and Isotopes	27
4.1.1 Common Isotopes: LDR/HDR Brachytherapy	27
4.1.2 LDR Source Design	28
4.1.3 HDR Source Design	29
4.1.4 Other Forms of Brachytherapy	30

4.2	Brachytherapy Exposure and Dose	30
4.2.1	Exposure	30
4.2.2	Exposure Rate from Brachytherapy Sources	31
4.2.3	Inverse Square Falloff.....	32
4.2.4	TG43 Formalism and Air Kerma Strength.....	33
4.2.5	TG43 Dose Calculation Formalism	33
	Further Reading	34
	Chapter 4 Problem Sets	34
5	Photon Interactions with Matter	39
	Introduction: Photons and Particles in Radiation Therapy	39
5.1	Low-Energy Photons	39
5.1.1	Coherent Scattering	39
5.1.2	Photoelectric Effect Process.....	40
5.1.3	Photoelectric Effect: Interaction Probabilities.....	42
5.2	Interaction of High-Energy Photons	43
5.2.1	Compton Scattering.....	43
5.2.2	Compton Scattering: Interaction Probabilities	45
5.2.3	Compton Scattering: Directionality Dependence	46
5.2.4	Pair Production	46
5.2.5	Interaction Cross-Sections: Putting It All Together	47
5.2.6	Photonuclear Reaction.....	48
5.3	Useful Reference Information: Photon Data	48
	Further Reading	49
	Chapter 5 Problem Sets	49
6	Photon Beams, Dose, and Kerma	53
6.1	Beam Attenuation and Spectra	53
6.1.1	Photon Beams: Exponential Attenuation	53
6.1.2	Half-Value Layer (HVL) and Tenth-Value Layer (TVL)	54
6.1.3	Z-Dependence in the Compton Regime	55
6.1.4	Beam Hardening and Attenuation.....	56
6.1.5	Beam Hardening: Effect on HVL	57
6.2	Dose and Kerma.....	57
6.2.1	Dose and Kerma in a Photon Beam	58
6.2.2	Electronic Equilibrium and Buildup.....	59
	Further Reading	60
	Chapter 6 Problem Sets	60
7	Particle Interactions with Matter	63
7.1	Radiative Energy Loss.....	63
7.1.1	Introduction: Charged Particle Interactions	63
7.1.2	Stopping Power	64
7.1.3	Radiative Stopping Power, S_{rad} : Mass and Z Dependence.....	65
7.2	Collisional Energy Loss	66
7.2.1	Collisional Stopping Power, S_{coll} , of Electrons	66
7.2.2	Energy Loss of Protons	67
7.2.3	Path of Charged Particles	68

7.3	Neutron Energy Loss and LET.....	69
7.3.1	Neutrons.....	69
7.3.2	Linear Energy Transfer (LET) and Relative Biological Effectiveness (RBE)	69
7.4	Useful Reference Information: Charged Particle Data.....	70
	Further Reading	70
	Chapter 7 Problem Sets	70
8	X-Ray Tubes and Linear Accelerators.....	73
8.1	X-Ray Tubes.....	73
8.1.1	Electron Acceleration and Energy	73
8.1.2	X-Ray Tubes: Physical Processes.....	73
8.1.3	Anode Design and Materials	73
8.1.4	X-Ray Tube Spectra	75
8.2	Beam Production in Linear Accelerators.....	77
8.2.1	Rationale for Megavoltage (MV) Beams.....	78
8.2.2	Acceleration with RF Waves.....	78
8.2.3	Linac Waveguides.....	80
8.2.4	Microwave System.....	81
8.2.5	Bending Magnets and Targets	83
8.2.6	X-Ray Production in Linac Targets.....	85
8.2.7	Linac Beam Energy.....	86
	Further Reading	86
	X-Ray Tubes	86
	Linacs.....	86
	Chapter 8 Problem Sets	87
9	Medical Linear Accelerators.....	89
9.1	Linac Collimation System.....	89
9.1.1	C-Arm Linac Geometry	89
9.1.2	Components of the Linac Head	89
9.1.3	Linac Electron Beams.....	92
9.1.4	Beam-Shaping Devices.....	93
9.1.5	MLC Design.....	95
9.1.6	Penumbra	96
9.1.7	MLC Interleaf Leakage and the Tongue-and-Groove Effect	98
9.1.8	C-Arm Linac Collimation Systems.....	100
9.2	Linear Accelerator Systems.....	101
9.2.1	TomoTherapy	103
9.2.2	CyberKnife.....	104
9.2.3	MR-Guided Linacs.....	105
	Further Reading	106
	Chapter 9 Problem Sets	107
10	Megavoltage Photon Beams	111
10.1	Basic Properties of Megavoltage Photon Beams.....	111
10.1.1	Introduction to Percent Depth Doses (PDDs)	111
10.1.2	Buildup and $d_{\max}$	112

10.1.3	PDD: Energy and Field Size	113
10.1.4	Profiles and Penumbra	114
10.1.5	Profile Flatness	115
10.2	Megavoltage Photon Beams: Effects in Patients	116
10.2.1	The Physics of Skin-Sparing	116
10.2.2	Skin-Sparing Dependencies	117
10.2.3	Bolus	120
	Further Reading	121
	Chapter 10 Problem Sets	122
11	Megavoltage Photon Beams: TMR and Dose Calculations	125
11.1	PDD and TMR	125
11.1.1	TMR Definition	126
11.2	Monitor Unit (MU) Calculations	127
11.2.1	MU Calculation Formula	128
11.2.2	Example MU Calculations	129
11.2.3	MU Calculations at an Extended Distance	130
11.2.4	MU Calculations with PDD	131
11.2.5	Equivalent Squares	131
	Further Reading	132
	Chapter 11 Problem Sets	133
12	Photon Beam Treatment Planning: Part I	145
12.1	Dose Calculation Algorithms and Inhomogeneities	145
12.1.1	Dose Calculation: TERMA and Kernels	145
12.1.2	TPS Beam Model	146
12.1.3	TPS Dose Algorithms	147
12.1.4	Inhomogeneities: Lung	148
12.1.5	Inhomogeneities: Bone	150
12.2	Treatment Planning with Megavoltage Photon Beams	150
12.2.1	Treatment Planning with Multiple Fields	150
12.2.2	Treatment Planning with Wedges	152
	Further Reading	156
	Chapter 12 Problem Sets	156
13	Photon Beam Treatment Planning: Part II	161
13.1	Volume Definitions and DVHs	161
13.1.1	ICRU Volume Definitions	161
13.1.2	Nomenclature from AAPM Task Group 263	163
13.1.3	Margins	163
13.1.4	Standards for Prescriptions	164
13.1.5	Dose Volume Histogram (DVH)	164
13.1.6	Conformity Index	165
13.1.7	Point Dose vs. Volumetric Dose Prescription	165
13.2	Plan Quality, TCP, and NTCP	166
	Further Reading	166
	Chapter 13 Problem Sets	167

14 IMRT and VMAT	171
14.1 IMRT and VMAT Delivery	171
14.1.1 Rationale for IMRT	171
14.1.2 Delivering IMRT Treatments	173
14.1.3 Other IMRT Delivery Methods	174
14.2 Inverse Planning	175
14.2.1 Forward vs. Inverse Planning	175
14.2.2 Cost Functions and Optimization	176
Further Reading	178
Chapter 14 Problem Sets	178
15 Megavoltage Electron Beams	183
15.1 Basic Physics and PDDs of MV Electron Beams	183
15.1.1 Introduction to Electron Therapy Beams	183
15.1.2 Production of Beams and Spectra	183
15.1.3 Electron PDD	185
15.1.4 Energy and Field Size Effects on PDD	186
15.1.5 Photon Contamination	187
15.2 Properties of Treatment Beams	188
15.2.1 Electron Beam Penumbra	188
15.2.2 Collimation and SSD Effects	188
15.2.3 Field Matching	189
15.2.4 Obliquity and Curved Surfaces	190
15.2.5 Inhomogeneities in Electron Beams	191
Further Reading	192
Chapter 15 Problem Sets	192
16 Radiation Measurement: Ionization Chambers	195
16.1 Introduction to Dose Measurement	195
16.1.1 Operation of Ionization Chamber	195
16.1.2 Farmer Chamber	195
16.1.3 Parallel Plate Chamber	196
16.1.4 Comparison of Cylindrical Chambers	197
16.1.5 Applications of Small Chambers	197
16.2 Dose Measurement Protocols	200
16.2.1 Protocols for Dose Calibration	200
16.2.2 Calibration and Quality Conversion	200
16.2.3 Charge Correction Factors	201
16.2.4 Reference Depth Specification	203
16.2.5 Electron Dose Measurements	203
Further Reading	205
Chapter 16 Problem Sets	205
17 Other Radiation Measurement Devices	209
17.1 Diodes	209
17.1.1 Physics of Operation	209
17.1.2 Advantages and Limitations of Diodes	210

17.1.3	Diodes for Scanning and Small Fields.....	211
17.1.4	Diodes for In Vivo Dosimetry.....	212
17.1.5	Absolute vs. Relative Dosimetry.....	212
17.2	Luminescent Dosimeter.....	212
17.2.1	Principles and Operations of Luminescent Dosimeters.....	212
17.2.2	Advantages and Limitations of Luminescent Dosimeters.....	213
17.3	Film.....	214
17.3.1	Radiographic Film.....	214
17.3.2	Film Calibration.....	215
17.3.3	Radiochromic Film.....	216
	Further Reading.....	217
	Diodes, OSLDs and TLDs.....	217
	Films.....	217
	Chapter 17 Problem Sets.....	217
18	Quality Assurance (QA)	221
18.1	Principles of QA.....	221
18.1.1	Swiss Cheese Model of Accidents.....	221
18.1.2	Example: QA and Risk.....	221
18.2	QA of Linear Accelerators.....	222
18.2.1	Introduction and Reports.....	222
18.2.2	Dosimetry Tests.....	222
18.2.3	Mechanical Tests.....	224
18.3	Patient-Specific QA.....	226
18.3.1	Devices for IMRT QA.....	228
18.3.2	Other Patient-Specific QA Approaches.....	229
18.3.3	IMRT QA References and Standards.....	229
18.3.4	QA: Review of Plans and Charts.....	230
18.4	QA of Full Dosimetry System.....	230
	Further Reading.....	231
	Chapter 18 Problem Sets.....	232
19	Radiographic Imaging	237
19.1	Basic Principles of Radiography.....	237
19.1.1	Contrast.....	237
19.1.2	Resolution.....	238
19.1.3	EPID Detectors and Pixelization.....	239
19.1.4	Noise and Exposure.....	241
19.1.5	Scatter.....	242
19.1.6	DICOM.....	243
19.2	Computed Tomography (CT).....	243
19.2.1	Basics of CT Reconstruction.....	243
19.2.2	Hounsfield Units.....	244
19.2.3	Fan-Beam Acquisition.....	245
19.2.4	Image Quality in CT.....	246
19.2.5	Cone-Beam CT (CBCT).....	248
19.2.6	CT Artifacts.....	248
	Further Reading.....	249
	Chapter 19 Problem Sets.....	249

20 Non-Radiographic Imaging	253
20.1 Magnetic Resonance Imaging	253
20.1.1 Nuclear Spin and Precession	253
20.1.2 Signals and Spin Flips	254
20.1.3 Image Formation in MRI	254
20.1.4 Spin-Echo: TR and T_1 -Weighting	255
20.1.5 Spin-Echo: TE and T_2 -Weighting	257
20.1.6 Inversion Recovery (IR) Pulse Sequences	259
20.1.7 Distortion and Artifacts in MRI	260
20.2 Nuclear Medicine and PET Imaging	261
20.2.1 Radioisotopes Used in Imaging	261
20.2.2 Single Photon Emission Computed Tomography (SPECT)	262
20.2.3 Positron Emission Tomography (PET): Isotopes and Uptake	263
20.2.4 PET: Image Acquisition	263
20.2.5 PET: Resolution and Representation	264
20.2.6 PET: Attenuation Correction	265
20.2.7 PET: Beyond FDG	265
20.3 Ultrasound	266
Further Reading	266
Chapter 20 Problem Sets	267
21 Image-Guided Radiation Therapy and Motion Management	269
21.1 Image-Guided Radiation Therapy (IGRT)	269
21.1.1 CBCT on C-Arm Linac Systems	269
21.1.2 IGRT with Planar Images	271
21.1.3 Other IGRT Technology	271
21.1.4 MR-Guided Radiation Therapy (MRgRT)	273
21.1.5 IGRT Use Scenarios	273
21.1.6 Availability of IGRT, Practice Patterns, and Evidence of Effectiveness	273
21.1.7 Quality Assurance (QA) of IGRT and Imaging Systems	275
21.2 Motion Management	275
21.2.1 Inter- and Intra-Fraction Motion	275
21.2.2 Respiratory Motion	278
21.2.3 4DCT	279
21.2.4 Respiration and Margins	280
21.2.5 Respiratory Gating	280
21.2.6 Breath-Hold Treatment	281
21.2.7 Compression	281
Further Reading	282
Chapter 21 Problem Sets	283
22 Stereotactic Treatments	285
22.1 Stereotactic Radiosurgery (SRS)	285
22.1.1 SRS Treatment Delivery	286
22.1.2 SRS Planning and Dose Distributions	287
22.1.3 Stereotactic "N"-Localizer System	289
22.1.4 Fractionated Treatment	289
22.1.5 Quality Assurance (QA) for SRS	290

22.2	Stereotactic Body Radiation Therapy (SBRT).....	291
22.2.1	SBRT Sites and Dose Protocols.....	292
22.2.2	SBRT Treatment Planning.....	292
22.2.3	Recommendations for Safe and Effective SBRT	294
	Further Reading	294
	HyTEC Organ-Specific Papers	294
	Chapter 22 Problem Sets	295
23	Total Body Irradiation (TBI) and Total Skin Electron Therapy (TSET)	297
23.1	Total Body Irradiation	297
23.1.1	TBI: Background and Dosimetric Goals.....	297
23.1.2	Key Features of TBI.....	297
23.1.3	Dose Homogeneity	298
23.1.4	TBI Setup Techniques and Devices.....	299
23.1.5	Dose Verification with In Vivo Measurements.....	300
23.2	Total Skin Electron Therapy (TSET)	300
23.2.1	Background and Dosimetric Goals of TSET	300
23.2.2	TSET Beam Delivery and Dose Uniformity.....	301
	Further Reading	302
	Chapter 23 Problem Sets	303
24	Particle Therapy.....	305
24.1	Basic Physics of Proton Therapy Beam Production	305
24.1.1	Overview and Indications of Use.....	305
24.1.2	Historical Overview, Expansion, and Costs	307
24.1.3	Physics of Pristine Bragg Peak.....	307
24.1.4	Spread-Out Bragg Peak (SOBP).....	308
24.1.5	Beam Shaping with Compensators	310
24.1.6	Beam-Shaping Systems	311
24.1.7	Cyclotrons and Synchrotrons	312
24.2	Proton Planning, Quality Assurance, and Ion Beams.....	314
24.2.1	Proton Dose and Relative Biological Effect (RBE).....	314
24.2.2	Proton Treatment Planning.....	314
24.2.3	Proton Therapy Quality Assurance (QA)	315
24.2.4	Heavy Ion Therapy	315
24.2.5	Relative Biological Effect (RBE) of Heavy Ion Beams.....	316
	Further Reading	317
	Chapter 24 Problem Sets	318
25	Radiation Protection	321
25.1	Dose Equivalent and Effective Dose	321
25.1.1	Dose Equivalent	321
25.1.2	Effective Dose.....	321
25.2	Risk Models, Dose Limits, and Monitoring	322
25.2.1	BEIR VII Report: Deterministic and Stochastic Effects.....	322
25.2.2	Exposure Limits	323
25.2.3	Background Exposure.....	323
25.2.4	Exposure Monitoring	324
25.2.5	Criteria for Releasing Patients.....	324

25.3	Shielding and Survey Meters	324
25.3.1	Shielding Calculation Formalism.....	325
25.3.2	Shielding Example: Primary Barrier.....	326
25.3.3	Shielding for Leakage and Scatter Radiation	327
25.3.4	Shielding for Neutrons.....	327
25.3.5	Survey Meters.....	328
	Further Reading	328
	Chapter 25 Problem Sets	328
26	Brachytherapy Applications and Radiopharmaceuticals	331
26.1	Planar Implants	331
26.1.1	Quimby System: Uniform Loading.....	331
26.1.2	Manchester System: Uniform Dose.....	331
26.1.3	Historical Systems in Perspective.....	332
26.2	Prostate Brachytherapy	332
26.2.1	TRUS-Guided LDR Prostate Implants	332
26.2.2	Quality Assurance and Safety for Prostate Brachytherapy	333
26.3	HDR Brachytherapy.....	334
26.3.1	HDR for Cervical Cancer: Clinical Indications	335
26.3.2	Cervical Cancer: Applicators.....	335
26.3.3	Dose Specification Systems	336
26.3.4	Other Applications of HDR.....	336
26.4	Radionuclide Therapy	336
	Further Reading	337
	Chapter 26 Problem Sets	338
27	Patient Safety and Quality Improvement.....	341
27.1	Incident Learning and Root-Cause Analysis (RCA).....	341
27.1.1	Example Error and Nomenclature	341
27.1.2	Swiss Cheese Model of Accidents	341
27.1.3	Root-Cause Analysis	341
27.2	Incident Learning.....	342
27.3	Failure Mode and Effects Analysis (FMEA)	343
27.3.1	Failure Modes and Risk	343
27.3.2	The FMEA Process.....	343
27.3.3	The FMEA Scoring System.....	343
27.3.4	FMEA vs. Incident Learning.....	344
	Further Reading	344
	Chapter 27 Problem Sets	344
	Index	347
