Preface	vii
<b>Chapter 1 Introduction: measurement of (biological) diversity</b>	1
What has changed in the last 15 years?	4
Biodiversity, biological diversity, and ecological diversity	6
What this book is about . . .	9
. . . and what it is not about	10
Assumptions of biodiversity measurement	11
Spatial scale and biodiversity measurement	12
Plan of the book	15
Summary	17
<b>Chapter 2 The commonness, and rarity, of species</b>	18
Methods of plotting species abundance data	21
Species abundance models	27
Statistical models	28
Goodness of fit tests	43
Biological (or theoretical) models	45
Other approaches	58
Fitting niche apportionment models to empirical data	61
General recommendations on investigating patterns of species abundance	64
Rarity	66
Summary	71

<b>Chapter 3</b>	<b>How many species?</b>	72
	Measures of species richness	74
	Surrogates of species	97
	How many species are there on earth?	98
	Summary	98
<b>Chapter 4</b>	<b>An index of diversity . . .</b>	100
	Diversity measures	102
	"Parametric" measures of diversity	102
	"Nonparametric" measures of diversity	106
	Taxonomic diversity	121
	Functional diversity	128
	Body size and biological diversity	129
	Summary	130
<b>Chapter 5</b>	<b>Comparative studies of diversity</b>	131
	Sampling matters	132
	Comparison of communities	143
	Diversity measures and environmental assessment	153
	Summary	160
<b>Chapter 6</b>	<b>Diversity in space (and time)</b>	162
	Measuring $\beta$ diversity	167
	Estimating the true number of shared species	176
	$\beta$ diversity and scale: practical implications	177
	Comparing communities	179
	Turnover in time	182
	Summary	184
<b>Chapter 7</b>	<b>No prospect of an end</b>	185
	Some challenges	186
	The biodiversity toolkit	189
	Conclusion	192
	References	194
	Worked examples	216
	Index	248
