

Contents

Foreword	xvii
Preface	xix
Part 1. Introduction and TCP/IP	1
<hr/>	
Chapter 1. Introduction	3
1.1 Introduction	3
1.2 A Simple Daytime Client	6
1.3 Protocol Independence	10
1.4 Error Handling: Wrapper Functions	11
1.5 A Simple Daytime Server	13
1.6 Roadmap to Client/Server Examples in the Text	16
1.7 OSI Model	18
1.8 BSD Networking History	20
1.9 Test Networks and Hosts	22
1.10 Unix Standards	25
1.11 64-Bit Architectures	28
1.12 Summary	29
Chapter 2. The Transport Layer: TCP, UDP, and SCTP	31
2.1 Introduction	31
2.2 The Big Picture	32
2.3 User Datagram Protocol (UDP)	34

2.4	Transmission Control Protocol (TCP)	35
2.5	Stream Control Transmission Protocol (SCTP)	36
2.6	TCP Connection Establishment and Termination	37
2.7	TIME_WAIT State	43
2.8	SCTP Association Establishment and Termination	44
2.9	Port Numbers	50
2.10	TCP Port Numbers and Concurrent Servers	52
2.11	Buffer Sizes and Limitations	55
2.12	Standard Internet Services	61
2.13	Protocol Usage by Common Internet Applications	62
2.14	Summary	63

Part 2. Elementary Sockets

65

Chapter 3. Sockets Introduction

67

3.1	Introduction	67
3.2	Socket Address Structures	67
3.3	Value-Result Arguments	74
3.4	Byte Ordering Functions	77
3.5	Byte Manipulation Functions	80
3.6	inet_aton, inet_addr, and inet_ntoa Functions	82
3.7	inet_pton and inet_ntop Functions	83
3.8	sock_ntop and Related Functions	86
3.9	readn, writen, and readline Functions	88
3.10	Summary	92

Chapter 4. Elementary TCP Sockets

95

4.1	Introduction	95
4.2	socket Function	95
4.3	connect Function	99
4.4	bind Function	101
4.5	listen Function	104
4.6	accept Function	109
4.7	fork and exec Functions	111
4.8	Concurrent Servers	114
4.9	close Function	117
4.10	getsockname and getpeername Functions	117
4.11	Summary	120

Chapter 5. TCP Client/Server Example

121

5.1	Introduction	121
5.2	TCP Echo Server: main Function	122
5.3	TCP Echo Server: str_echo Function	123
5.4	TCP Echo Client: main Function	124
5.5	TCP Echo Client: str_cli Function	125
5.6	Normal Startup	126
5.7	Normal Termination	128

5.8	POSIX Signal Handling	129
5.9	Handling SIGCHLD Signals	132
5.10	wait and waitpid Functions	135
5.11	Connection Abort before accept Returns	139
5.12	Termination of Server Process	141
5.13	SIGPIPE Signal	142
5.14	Crashing of Server Host	144
5.15	Crashing and Rebooting of Server Host	144
5.16	Shutdown of Server Host	145
5.17	Summary of TCP Example	146
5.18	Data Format	147
5.19	Summary	151

Chapter 6. I/O Multiplexing: The select and poll Functions 153

6.1	Introduction	153
6.2	I/O Models	154
6.3	select Function	160
6.4	str_cli Function (Revisited)	167
6.5	Batch Input and Buffering	169
6.6	shutdown Function	172
6.7	str_cli Function (Revisited Again)	173
6.8	TCP Echo Server (Revisited)	175
6.9	pselect Function	181
6.10	poll Function	182
6.11	TCP Echo Server (Revisited Again)	185
6.12	Summary	188

Chapter 7. Socket Options 191

7.1	Introduction	191
7.2	getsockopt and setsockopt Functions	192
7.3	Checking if an Option Is Supported and Obtaining the Default	194
7.4	Socket States	198
7.5	Generic Socket Options	198
7.6	IPv4 Socket Options	214
7.7	ICMPv6 Socket Option	216
7.8	IPv6 Socket Options	216
7.9	TCP Socket Options	219
7.10	SCTP Socket Options	222
7.11	fcntl Function	233
7.12	Summary	236

Chapter 8. Elementary UDP Sockets 239

8.1	Introduction	239
8.2	recvfrom and sendto Functions	240
8.3	UDP Echo Server: main Function	241
8.4	UDP Echo Server: dg_echo Function	242
8.5	UDP Echo Client: main Function	244
8.6	UDP Echo Client: dg_cli Function	245

8.7	Lost Datagrams	245
8.8	Verifying Received Response	246
8.9	Server Not Running	248
8.10	Summary of UDP Example	250
8.11	<code>connect</code> Function with UDP	252
8.12	<code>dg_cli</code> Function (Revisited)	256
8.13	Lack of Flow Control with UDP	257
8.14	Determining Outgoing Interface with UDP	261
8.15	TCP and UDP Echo Server Using <code>select</code>	262
8.16	Summary	264

Chapter 9.

Elementary SCTP Sockets

267

9.1	Introduction	267
9.2	Interface Models	268
9.3	<code>sctp_bindx</code> Function	272
9.4	<code>sctp_connectx</code> Function	274
9.5	<code>sctp_getpaddrs</code> Function	275
9.6	<code>sctp_freepaddrs</code> Function	275
9.7	<code>sctp_getladdrs</code> Function	275
9.8	<code>sctp_freeladdrs</code> Function	276
9.9	<code>sctp_sendmsg</code> Function	276
9.10	<code>sctp_rcvmsg</code> Function	277
9.11	<code>sctp_opt_info</code> Function	278
9.12	<code>sctp_peeloff</code> Function	278
9.13	<code>shutdown</code> Function	278
9.14	Notifications	280
9.15	Summary	286

Chapter 10.

SCTP Client/Server Example

287

10.1	Introduction	287
10.2	SCTP One-to-Many-Style Streaming Echo Server: <code>main</code> Function	288
10.3	SCTP One-to-Many-Style Streaming Echo Client: <code>main</code> Function	290
10.4	SCTP Streaming Echo Client: <code>str_cli</code> Function	292
10.5	Exploring Head-of-Line Blocking	293
10.6	Controlling the Number of Streams	299
10.7	Controlling Termination	300
10.8	Summary	301

Chapter 11.

Name and Address Conversions

303

11.1	Introduction	303
11.2	Domain Name System (DNS)	303
11.3	<code>gethostbyname</code> Function	307
11.4	<code>gethostbyaddr</code> Function	310
11.5	<code>getservbyname</code> and <code>getservbyport</code> Functions	311
11.6	<code>getaddrinfo</code> Function	315
11.7	<code>gai_strerror</code> Function	320
11.8	<code>freeaddrinfo</code> Function	321
11.9	<code>getaddrinfo</code> Function: IPv6	322

11.10	getaddrinfo Function: Examples	324
11.11	host_serv Function	325
11.12	tcp_connect Function	326
11.13	tcp_listen Function	330
11.14	udp_client Function	334
11.15	udp_connect Function	337
11.16	udp_server Function	338
11.17	getnameinfo Function	340
11.18	Re-entrant Functions	341
11.19	gethostbyname_r and gethostbyaddr_r Functions	344
11.20	Obsolete IPv6 Address Lookup Functions	346
11.21	Other Networking Information	348
11.22	Summary	349

Part 3. Advanced Sockets 351

Chapter 12. IPv4 and IPv6 Interoperability 353

12.1	Introduction	353
12.2	IPv4 Client, IPv6 Server	354
12.3	IPv6 Client, IPv4 Server	357
12.4	IPv6 Address-Testing Macros	360
12.5	Source Code Portability	361
12.6	Summary	362

Chapter 13. Daemon Processes and the `inetd` Superserver 363

13.1	Introduction	363
13.2	syslogd Daemon	364
13.3	syslog Function	365
13.4	daemon_init Function	367
13.5	inetd Daemon	371
13.6	daemon_inetd Function	377
13.7	Summary	379

Chapter 14. Advanced I/O Functions 381

14.1	Introduction	381
14.2	Socket Timeouts	381
14.3	recv and send Functions	387
14.4	readv and writev Functions	389
14.5	recvmsg and sendmsg Functions	390
14.6	Ancillary Data	395
14.7	How Much Data Is Queued?	398
14.8	Sockets and Standard I/O	399
14.9	Advanced Polling	402
14.10	Summary	408

Chapter 15.	Unix Domain Protocols	411
15.1	Introduction	411
15.2	Unix Domain Socket Address Structure	412
15.3	socketpair Function	414
15.4	Socket Functions	415
15.5	Unix Domain Stream Client/Server	416
15.6	Unix Domain Datagram Client/Server	418
15.7	Passing Descriptors	420
15.8	Receiving Sender Credentials	429
15.9	Summary	432
Chapter 16.	Nonblocking I/O	435
16.1	Introduction	435
16.2	Nonblocking Reads and Writes: str_cli Function (Revisited)	437
16.3	Nonblocking connect	448
16.4	Nonblocking connect: Daytime Client	449
16.5	Nonblocking connect: Web Client	452
16.6	Nonblocking accept	461
16.7	Summary	463
Chapter 17.	ioctl Operations	465
17.1	Introduction	465
17.2	ioctl Function	466
17.3	Socket Operations	466
17.4	File Operations	468
17.5	Interface Configuration	468
17.6	get_ifi_info Function	469
17.7	Interface Operations	480
17.8	ARP Cache Operations	481
17.9	Routing Table Operations	483
17.10	Summary	484
Chapter 18.	Routing Sockets	485
18.1	Introduction	485
18.2	Datalink Socket Address Structure	486
18.3	Reading and Writing	487
18.4	sysctl Operations	495
18.5	get_ifi_info Function (Revisited)	500
18.6	Interface Name and Index Functions	504
18.7	Summary	508
Chapter 19.	Key Management Sockets	511
19.1	Introduction	511
19.2	Reading and Writing	512
19.3	Dumping the Security Association Database (SADB)	514
19.4	Creating a Static Security Association (SA)	517
19.5	Dynamically Maintaining SAs	524
19.6	Summary	528

Chapter 20.	Broadcasting	529
20.1	Introduction	529
20.2	Broadcast Addresses	531
20.3	Unicast versus Broadcast	532
20.4	dg_cli Function Using Broadcasting	535
20.5	Race Conditions	538
20.6	Summary	547
Chapter 21.	Multicasting	549
21.1	Introduction	549
21.2	Multicast Addresses	549
21.3	Multicasting versus Broadcasting on a LAN	553
21.4	Multicasting on a WAN	556
21.5	Source-Specific Multicast	558
21.6	Multicast Socket Options	559
21.7	mcast_join and Related Functions	565
21.8	dg_cli Function Using Multicasting	570
21.9	Receiving IP Multicast Infrastructure Session Announcements	571
21.10	Sending and Receiving	575
21.11	Simple Network Time Protocol (SNTP)	579
21.12	Summary	584
Chapter 22.	Advanced UDP Sockets	587
22.1	Introduction	587
22.2	Receiving Flags, Destination IP Address, and Interface Index	588
22.3	Datagram Truncation	594
22.4	When to Use UDP Instead of TCP	594
22.5	Adding Reliability to a UDP Application	597
22.6	Binding Interface Addresses	608
22.7	Concurrent UDP Servers	612
22.8	IPv6 Packet Information	615
22.9	IPv6 Path MTU Control	618
22.10	Summary	620
Chapter 23.	Advanced SCTP Sockets	621
23.1	Introduction	621
23.2	An Autoclosing One-to-Many-Style Server	621
23.3	Partial Delivery	622
23.4	Notifications	625
23.5	Unordered Data	629
23.6	Binding a Subset of Addresses	630
23.7	Determining Peer and Local Address Information	631
23.8	Finding an Association ID Given an IP Address	635
23.9	Heartbeating and Address Failure	636
23.10	Peeling Off an Association	637
23.11	Controlling Timing	639
23.12	When to Use SCTP Instead of TCP	641
23.13	Summary	643

Chapter 24.	Out-of-Band Data	645
24.1	Introduction	645
24.2	TCP Out-of-Band Data	645
24.3	socketmark Function	654
24.4	TCP Out-of-Band Data Recap	661
24.5	Summary	662
Chapter 25.	Signal-Driven I/O	663
25.1	Introduction	663
25.2	Signal-Driven I/O for Sockets	664
25.3	UDP Echo Server Using SIGIO	666
25.4	Summary	672
Chapter 26.	Threads	675
26.1	Introduction	675
26.2	Basic Thread Functions: Creation and Termination	676
26.3	str_cli Function Using Threads	679
26.4	TCP Echo Server Using Threads	681
26.5	Thread-Specific Data	686
26.6	Web Client and Simultaneous Connections (Continued)	694
26.7	Mutexes: Mutual Exclusion	697
26.8	Condition Variables	701
26.9	Web Client and Simultaneous Connections (Continued)	705
26.10	Summary	707
Chapter 27.	IP Options	709
27.1	Introduction	709
27.2	IPv4 Options	709
27.3	IPv4 Source Route Options	711
27.4	IPv6 Extension Headers	719
27.5	IPv6 Hop-by-Hop Options and Destination Options	719
27.6	IPv6 Routing Header	725
27.7	IPv6 Sticky Options	731
27.8	Historical IPv6 Advanced API	732
27.9	Summary	733
Chapter 28.	Raw Sockets	735
28.1	Introduction	735
28.2	Raw Socket Creation	736
28.3	Raw Socket Output	737
28.4	Raw Socket Input	739
28.5	ping Program	741
28.6	traceroute Program	755
28.7	An ICMP Message Daemon	769
28.8	Summary	786

Chapter 29.	Datalink Access	787
29.1	Introduction	787
29.2	BSD Packet Filter (BPF)	788
29.3	Datalink Provider Interface (DLPI)	790
29.4	Linux: SOCK_PACKET and PF_PACKET	791
29.5	libpcap: Packet Capture Library	792
29.6	libnet: Packet Creation and Injection Library	793
29.7	Examining the UDP Checksum Field	793
29.8	Summary	815
Chapter 30.	Client/Server Design Alternatives	817
30.1	Introduction	817
30.2	TCP Client Alternatives	819
30.3	TCP Test Client	820
30.4	TCP Iterative Server	821
30.5	TCP Concurrent Server, One Child per Client	822
30.6	TCP Preforked Server, No Locking Around accept	826
30.7	TCP Preforked Server, File Locking Around accept	832
30.8	TCP Preforked Server, Thread Locking Around accept	835
30.9	TCP Preforked Server, Descriptor Passing	836
30.10	TCP Concurrent Server, One Thread per Client	842
30.11	TCP Prethreaded Server, per-Thread accept	844
30.12	TCP Prethreaded Server, Main Thread accept	846
30.13	Summary	849
Chapter 31.	STREAMS	851
31.1	Introduction	851
31.2	Overview	851
31.3	getmsg and putmsg Functions	856
31.4	getpmsg and putpmsg Functions	857
31.5	ioctl Function	857
31.6	Transport Provider Interface (TPI)	858
31.7	Summary	868
Appendix A.	IPv4, IPv6, ICMPv4, and ICMPv6	869
A.1	Introduction	869
A.2	IPv4 Header	869
A.3	IPv6 Header	871
A.4	IPv4 Addresses	874
A.5	IPv6 Addresses	877
A.6	Internet Control Message Protocols (ICMPv4 and ICMPv6)	882
Appendix B.	Virtual Networks	885
B.1	Introduction	885
B.2	The MBone	885
B.3	The 6bone	887
B.4	IPv6 Transition: 6to4	889

Appendix C. Debugging Techniques	891
C.1 System Call Tracing	891
C.2 Standard Internet Services	893
C.3 sock Program	893
C.4 Small Test Programs	896
C.5 tcpdump Program	896
C.6 netstat Program	896
C.7 lsof Program	897
Appendix D. Miscellaneous Source Code	899
D.1 unp.h Header	899
D.2 config.h Header	904
D.3 Standard Error Functions	910
Appendix E. Solutions to Selected Exercises	913
Bibliography	947
Index	955
