

THE WORLD OF MATHEMATICS

Volume 1

EDITED BY JAMES NEWMAN

"... promises to be the most frequently used reference book on mathematics, as well as a delight to readers with a wide range of backgrounds."— *The New York Times*

The World of Mathematics, a monumental four-volume reference 15 years in the making, was specially designed to make mathematics more accessible to the layman. It comprises nontechnical essays on every aspect of the subject, including articles by and about scores of eminent mathematicians, as well as literary figures, economists, biologists, and many other thinkers. This unique compendium includes the work of Archimedes, Galileo, Descartes, Newton, Gregor Mendel, Edmund Halley, Jonathan Swift, John Maynard Keynes, Henri Poincaré, Lewis Carroll, George Boole, Bertrand Russell, Alfred North Whitehead, John von Neumann, and many others. In addition, an informative commentary by noted mathematics scholar James R. Newman precedes each essay or group of essays, explaining their relevance and context in the history and development of mathematics.

Volume 1 (Parts I-IV) includes a general survey of the nature of mathematics; historical and biographical information on prominent mathematicians throughout history; material on arithmetic, numbers, and the art of counting; and the mathematics of space and motion. Individual essays include "Gauss, the Prince of Mathematicians," by Eric Temple Bell; "Calculating Prodigies," by W. W. Rouse Ball; "The Seven Bridges of Königsburg," by Leonhard Euler; and more than 30 others.

Unabridged republication of Vol. I of the 4-volume edition published by Simon and Schuster, New York, 1956. Index. Numerous text figures. 768pp. 5% x 8%. Paperbound.

Table of Contents

VOLUME ONE

PART I: General Survey

Philip E. B. Jourdain; Commentary 2

- | | |
|---|---|
| 1. The Nature of Mathematics by PHILIP E. B. JOURDAIN | 4 |
|---|---|

PART II: Historical and Biographical

Commentary 74

- | | |
|-----------------------------|----|
| 1. The Great Mathematicians | 75 |
| by HERBERT WESTREN TURNBULL | |

Commentary 169

- | | |
|---|-----|
| 2. The Rhind Papyrus by JAMES R. NEWMAN | 170 |
|---|-----|

Commentary 179

- | | |
|---|-----|
| 3. Archimedes by PLUTARCH, VITRUVIUS, TZETZES | 180 |
|---|-----|

Commentary 188

- | | |
|-------------------------------------|-----|
| 4. Greek Mathematics by IVOR THOMAS | 189 |
|-------------------------------------|-----|

Robert Recorde; Commentary 210

- | | |
|--|-----|
| 5. The Declaration of the Profit of Arithmeticke | 212 |
| by ROBERT RECORDE | |

Kepler and Lodge; Commentary 218

- | | |
|--------------------------------------|-----|
| 6. Johann Kepler by SIR OLIVER LODGE | 220 |
|--------------------------------------|-----|

Descartes and Analytical Geometry; Commentary 235

- | | |
|-----------------------------------|-----|
| 7. The Geometry by RENÉ DESCARTES | 239 |
|-----------------------------------|-----|

Commentary 254

- | | |
|--|-----|
| 8. Isaac Newton by E. N. DA C. ANDRADE | 255 |
|--|-----|

- | | |
|---|-----|
| 9. Newton, the Man by JOHN MAYNARD KEYNES | 277 |
|---|-----|

10. The Analyst by BISHOP BERKELEY	288
<i>Gauss: Commentary</i> 294	
11. Gauss, the Prince of Mathematicians by ERIC TEMPLE BELL	295
<i>Cayley and Sylvester: Commentary</i> 340	
12. Invariant Twins, Cayley and Sylvester by ERIC TEMPLE BELL	341
<i>Commentary</i> 366	
13. Srinivasa Ramanujan by JAMES R. NEWMAN	368
<i>Bertrand Russell: Commentary</i> 377	
14. My Mental Development by BERTRAND RUSSELL	381
<i>Alfred North Whitehead: Commentary</i> 395	
15. Mathematics as an Element in the History of Thought by ALFRED NORTH WHITEHEAD	402

PART III: Arithmetic, Numbers and the Art of Counting

<i>Poppy Seeds and Large Numbers: Commentary</i> 418	
1. The Sand Reckoner by ARCHIMEDES	420
<i>The Art of Counting: Commentary</i> 430	
2. Counting by LEVI LEONARD CONANT	432
3. From Numbers to Numerals and From Numerals to Com- putation by DAVID EUGENE SMITH and JEKUTHIEL GINSBURG	442
<i>Idiot Savants: Commentary</i> 465	
4. Calculating Prodigies by W. W. ROUSE BALL	467
<i>Gifted Birds: Commentary</i> 488	
5. The Ability of Birds to "Count" by O. KOEHLER	489
<i>The Mysteries of Arithmetic: Commentary</i> 497	
6. The Queen of Mathematics by ERIC TEMPLE BELL	498
$(P + PQ)^{m/n}$: <i>Commentary</i> 519	
7. On the Binomial Theorem for Fractional and Negative Ex- ponents by ISAAC NEWTON	521
<i>The Number Concept: Commentary</i> 525	
8. Irrational Numbers by RICHARD DEDEKIND	528
9. Definition of Number by BERTRAND RUSSELL	537

PART IV: Mathematics of Space and Motion

William Kingdon Clifford: Commentary 546

1. The Exactness of Mathematical Laws 548
by WILLIAM KINGDON CLIFFORD
2. The Postulates of the Science of Space 552
by WILLIAM KINGDON CLIFFORD
3. On the Space Theory of Matter 568
by WILLIAM KINGDON CLIFFORD

A Famous Problem: Commentary 570

4. The Seven Bridges of Königsberg *by* LEONHARD EULER 573
5. Topology *by* RICHARD COURANT *and* HERBERT ROBBINS 581

Dürer and the Mathematics of Painting: Commentary 600

6. Dürer as a Mathematician *by* ERWIN PANOFSKY 603
7. Projective Geometry *by* MORRIS KLINE 622

Hermann von Helmholtz: Commentary 642

8. On the Origin and Significance of Geometrical Axioms 647
by HERMANN VON HELMHOLTZ

Commentary 669

9. Symmetry *by* HERMANN WEYL 671
