

A-LEVEL GEOGRAPHY TOPIC MASTER

COASTAL LANDSCAPES

Master the in-depth knowledge and higher-level skills that A-level Geography students need to succeed.

Blending detailed content and case studies with questions, exemplars and guidance, this focused topic book:

- Significantly improves your knowledge and understanding of A-level content and concepts, extending learning far beyond your course textbooks
- Strengthens your analytical and interpretative skills through questions that involve a range of geographical data sources, with guidance on how to approach each task
- Demonstrates how to evaluate issues, with a section in every chapter that shows how to think geographically, consider relevant evidence and structure a balanced essay
- Provides everything you need to excel, from case studies and definitions of key terms, to suggestions for further research and fieldwork ideas for the Independent Investigation
- Helps you to check, apply and consolidate your learning, using end-of-chapter refresher questions and discussion points

Author

Dr Peter Stiff has considerable A-level teaching experience, including leading field trips in coastal environments. He has written extensively for A-level Geography and is an A-level Principal Examiner. He is a past Fawcett Fellow in the Geography Department at University College, London. He currently lives overlooking the coast in East Devon.

Series editor

Simon Oakes has worked as a Chief Examiner and curriculum designer across a range of Geography qualifications, including A-level and IB Diploma. He is an experienced schoolteacher and undergraduate lecturer, and a recipient of the Royal Geographical Society's Ordnance Survey award for excellence in Geography education.

Consultant

This book has been reviewed by Jon French, Professor of Physical Geography and formerly Head of the Department of Geography at University College, London. He is the Director of the Coastal and Estuarine Research Unit, has worked for the IPCC and is actively involved in shaping UK flood and coastal defence policy.

This book is suitable for a variety of topics including:

- AQA: Coastal Systems and Landscapes
- Pearson Edexcel: Coastal Landscapes and Change
- OCR: Coastal Landscapes
- WJEC/Eduqas: Coastal Landscapes

Introduction

iv

CHAPTER 1: Coastal system dynamics – flows of energy

1

- 1 Coasts as open systems 2
- 2 Energy inputs – waves, tides and currents 5
- 3 Feedback, equilibrium and coasts 19
- 4 Evaluating the issue: assessing the relative importance of different energy sources in the coastal system 22

CHAPTER 2: Coastal system dynamics – processes at work in the coastal zone

28

- 1 Marine erosional processes 29
- 2 Sub-aerial weathering and mass movement 31
- 3 Sources and types of coastal sediments 36
- 4 Transport and depositional processes in the coastal zone 39
- 5 Evaluating the issue: to what extent is wave energy the most significant influence on sediment transport in the coastal zone? 46

CHAPTER 3: Contrasting coastlines

51

- 1 Coastlines in plan 51
- 2 High energy coasts – marine cliffs and shore platforms 54
- 3 Low energy coasts – beaches in plan and profile 63
- 4 Low wave energy coasts – estuaries and deltas 78
- 5 Evaluating the issue: to what extent are marine cliffs the result of erosion? 81

CHAPTER 4: Ecosystems in coastal environments

87

- 1 Recognising the value of coastal ecosystems 88
- 2 Ecological succession: salt marshes and marine sand dunes 90
- 3 Mangroves and coral reef ecosystems 104

- 4 Evaluating the issue: assessing the role of vegetation in the development of marine dune systems over time 108

CHAPTER 5: Coastal system dynamics – changing sea level

113

- 1 Causes of sea level change 114
- 2 Characteristic landscapes and landforms 122
- 3 Coastal flooding: risks and management 128
- 4 Evaluating the issue: assessing the influence of sea level change on coastal landforms and landscape development 137

CHAPTER 6: The significance of coasts for human activities

143

- 1 The growth of population and settlements 144
- 2 Resources in the coastal zone 148
- 3 The importance of the coastal zone in the globalisation process 162
- 4 Evaluating the issue: to what extent does a society's use of coastal zone resources depend on its access to technology? 170

CHAPTER 7: Coastal risk, resilience and management

176

- 1 Risks to human activities along coastlines 177
- 2 Managing coastlines for resilience with hard and soft engineering 181
- 3 Planning for coastal change 190
- 4 Evaluating the issue: discussing the view that hard coastal defences cause more problems than they solve 202

CHAPTER 8: Study guides

208

- 1 AQA: Coastal Systems and Landscapes 208
- 2 Pearson Edexcel: Coastal Landscapes and Change 212
- 3 OCR: Coastal Landscapes 216
- 4 WJEC and Eduqas: Changing Landscapes 220
