A-LEVEL GEOGRAPHY TOPIC MASTER

GLACIATED LANDSCAPES

Master the in-depth knowledge and higher-level skills that A-level Geography students need to succeed.

Blending detailed content and case studies with questions, exemplars and guidance, this focused topic book:

- Significantly improves your knowledge and understanding of A-level content and concepts, extending learning far beyond your course textbooks
- Strengthens your analytical and interpretative skills through questions that involve a range of geographical data sources, with guidance on how to approach each task
- Demonstrates how to evaluate issues, with a section in every chapter that shows how to think geographically, consider relevant evidence and structure a balanced essay
- Provides everything you need to excel, from case studies and definitions of key terms, to suggestions for further research and fieldwork ideas for the Independent Investigation
- Helps you to check, apply and consolidate your learning, using end-of-chapter refresher questions and discussion points

Author

Nicky King is an experienced teacher of A-level Geography. She has worked for many years as a Principal Examiner and curriculum designer for WJEC/Eduqas. Her interest in glaciated landscapes stems from undergraduate field experience on the Gorner and Findelen glaciers in Switzerland and subsequent field trips to Iceland and Snowdonia with A-level Geography students.

Series editor

Simon Oakes has worked as a Chief Examiner and curriculum designer across a range of Geography qualifications, including A-level and IB Diploma. He is an experienced schoolteacher and undergraduate lecturer, and a recipient of the Royal Geographical Society's Ordnance Survey award for excellence in Geography education.

Consultant

This book has been reviewed by Neil Glasser, Professor of Physical Geography at Aberystwyth University. His research interests are glaciers and glaciated landscapes and he has studied glaciers in the Alps, Himalayas, Patagonia, New Zealand, Iceland, Greenland and Antarctica.

This book is suitable for a variety of topics including:

- AQA: Glacial Systems and Landscapes
- Pearson Edexcel: Glaciated Landscapes and Change
- OCR: Glaciated Landscapes
- WJEC/Eduqas: Glaciated Landscapes

CHAPTER 1 Glaciers and glaciated landscapes as systems

1 The glacial system 1
2 Glacier movement 8
3 Glacial landforms and landscape systems 13
4 Feedback and equilibrium in glaciated landscape systems 16
5 Evaluating the issue: assessing the relative importance of different energy sources in the glaciated landscape system 19

CHAPTER 2 The range of glacial environments and their distribution

1 The classification of ice masses 25
2 The changing global distribution of ice masses and glacial landscapes 35
3 Evaluating the issue: to what extent can the characteristics of Pleistocene ice masses be accurately reconstructed using present-day landscape evidence? 41

CHAPTER 3 Processes and landforms of glacial erosion

1 Processes of weathering and glacial erosion 46
2 The factors influencing glacial erosion 51
3 Landforms of glacial erosion 57
4 Evaluating the issue: to what extent is glacial erosion the main influence on the development of cirques? 65

CHAPTER 4 Processes and landforms of glacial deposition

1 Processes of glacial and glaciofluvial transport 70
2 Processes of glacial and glaciofluvial deposition 74
3 Landforms of glacial and glaciofluvial deposition 80
4 Evaluating the issue: assessing the role of water and ice in the development of landscapes of glacial deposition 88

CHAPTER 5 Periglacial processes and landforms

1 Periglacial climates and environments 94
2 Ground ice formation and associated features 98
3 Landforms associated with freeze–thaw cycles and mass movement and the action of water and wind 104
4 Evaluating the issue: assessing the relative importance of water in the development of periglacial landforms 108

CHAPTER 6 The evolution of glacial landforms and landscapes in relation to past, present and future climate change

1 Changing glacial processes and patterns 114
2 Glacial landforms and landscapes influenced by past and present climate change 124
3 Future climate change and glaciated landscapes 129
4 Evaluating the issue: to what extent are periglacial landscape systems more vulnerable to climate change than glaciated landscape systems? 133

CHAPTER 7 Human activity and glaciated landscape systems

1 Human activity in glacial environments 140
2 Human activity in periglacial environments 147
3 Evaluating the issue: discuss the varied changes human activity has brought to glacial and periglacial landscape systems 153

CHAPTER 8 Study guides

1 AQA A-level Geography: Glacial systems and landscapes 158
2 Pearson Edexcel A-level Geography: Glacial landscapes and change 163
3 OCR A-level Geography: Glaciated landscapes 167
4 Eduqas/WJEC A-level Geography: Glaciated landscapes 171
