PREFACE	5
AUTHOR'S INTRODUCTORY WORD	7
Abstract	8
USED AND RELATED DESIGNATIONS	11
1. BASIC TERMINOLOGY DEFINITION – BULLETS WOUND EFFECT AND WOUNDING POTENTIAL	15
1.1 Mechanism and pathology of a gunshot injury.....	18
1.2 Bullets wounding potential.....	25
1.3 Bullets wound effect.....	26
2. BULLETS WOUND EFFECT COMPONENTS AND FACTORS	29
2.1 Bullets wound effect components	29
2.1.1 Armour-piercing effect	29
2.1.2 Fragmentation and high explosive effect	30
2.1.3 Fragmentation and bullets secondary effect	31
2.2 Bullets wound effect factors.....	35
2.2.1 Structural and ballistic characteristics of penetrating bullet.....	35
2.2.2 Characteristics of biological target	36
2.3 Blast injuries ("Blast syndrom").....	41
2.3.1 Effects on vital tissues	42
2.4 Resulting wound effect in the hit tissues	42
3. INDIRECT IDENTIFICATION METHOD IN EXPERIMENTAL WOUND BALLISTICS (EWB).....	44
3.1 Definition and position of indirect identification method in EWB	44
3.2 Evaluation of gunshot injuries from the perspective of their clinical severity	46
3.2.1 Simple (uncomplicated) gunshot injury of a person	46
3.2.2 Complicated gunshot injuries of a person	47
4. PHYSICAL MODELS AND THEIR USE IN THE BALLISTIC EXPERIMENT	49
4.1 Use of homogeneous physical models in EWB	49
4.1.1 Shelling of gelatine blocks.....	52
4.1.2 Shelling of soap blocks.....	56
4.1.3 Comparison of gelatine and soap behaviour in the ballistic experiment	63
4.1.4 Shelling of test blocks from the PP 75/25 mixture	64
4.1.5 Shelling of plasticine test blocks.....	68
4.2 Use of heterogeneous physical models in EWB	69
4.2.1 Structure of heterogeneous physical models.....	71
4.2.2 Substitute media used for heterogeneous physical models production	71
5. METHODS OF QUANTIFIED BULLETS WOUNDING POTENTIAL EVALUATION.....	74
5.1 Injury profile method	75
5.2 Radial rupture method	76
5.3 Optical method. I-SPEED analysis.....	79

6. CRITERION FOR QUANTIFIED BULLETS WOUNDING POTENTIAL

EVALUATION81

6.1 Wounding potential evaluation criterion of hand rifle arm cartridges bullet	82
6.2 Wounding potential evaluation criterion of gun cartridges bullet	82
6.2.1 Wounding potential evaluation criterion of gun bullets based on solid equivalent barrier of predetermined thickness penetrating	83
6.2.2 Efficiency evaluation criterion of gun bullets based on suitably selected physical quantity	83
6.2.3 Probabilistic efficiency criterion of gun bullets.....	86
6.3 Stopping effect of pistol and revolver cartridges bullets	88
6.4 Criteria of pistol and revolver bullets stopping effect.....	89
6.4.1 RSP criterion (Relative Stopping Power).....	89
6.4.2 OSS criterion (One Shot Stop)	90
6.5 „FRANGIBLE“ bullets wounding potential evaluation	93
6.6 Wounding potential evaluation of ricocheted bullets in a ballistic experiment	94
6.6.1 Ballistic experiment objectives.....	94
6.6.2 Ballistic characteristics of the experiment.....	95
6.6.3 Dimensional conditions of the firing station	96
6.6.4 Pre-experimental mathematical model	97
6.6.5 Ballistic simulation results	101
6.6.6 Forensic evaluation of real biological tissues damage.....	101
6.6.7 Final discussion and a brief future look.....	104
6.7 Partial conclusions	105

7. PROPOSAL OF OWN BULLETS WOUNDING POTENTIAL EVALUATION

CRITERION107

7.1 Bullets simulation effects on soft biological tissues	109
7.1.1 Ballistic experiment objectives.....	110
7.1.2 Ballistic characteristics of the experiment.....	112
7.1.3 Results evaluation.....	113
7.1.4 Prediction of the examined bullets wound effects after the soft biological tissue hit.....	117
7.1.5 Partial conclusions.....	121
7.2 Components of the proposed bullets wounding potential criterion (BWPC).....	121
7.3 Examined cartridges BWPC values.....	123

CONCLUSION.....125
