

# Variational and Non-variational Methods in Nonlinear Analysis and Boundary Value Problems

D. Motreanu and V. Rădulescu

This book provides a comprehensive exposition of modern topics in nonlinear analysis with applications to various boundary value problems with discontinuous nonlinearities and nonsmooth constraints. Our framework includes multivalued elliptic problems with discontinuities, variational inequalities, hemivariational inequalities and evolution problems. In addition to the existence of solutions, a major part of the book is devoted to the study of different qualitative properties such as multiplicity, location, extremality, and stability. The treatment relies on variational methods, monotonicity principles, topological arguments and optimization techniques. The book is based on the authors' original results obtained in the last decade. A great deal of the material is published for the first time in this book and is organized in a unified way. The book is self-contained. The abstract results are illustrated through various examples and applications.

## *Audience*

Faculty, graduate students, pure and applied mathematicians, researchers in mechanics, physics, and engineering.

Preface	ix
Introduction	xi
1. ELEMENTS OF NONSMOOTH ANALYSIS	1
1 Generalized Gradients of Locally Lipschitz Functionals	1
2 Palais-Smale Condition and Coerciveness for a Class of Nonsmooth Functionals	12
3 Nonsmooth Analysis in the Sense of Degiovanni	19
2. CRITICAL POINTS FOR NONSMOOTH FUNCTIONALS	31
1 Critical Point Theory for Locally Lipschitz Functionals	31
2 Critical Point Theory for Convex Perturbations of Locally Lipschitz Functionals	46
3 A Critical Point Theory in Metric Spaces	55
3. VARIATIONAL METHODS	67
1 Critical Point Theory for Convex Perturbations of Locally Lipschitz Functionals in the Limit Case	67
2 Examples	83
4. MULTIVALUED ELLIPTIC PROBLEMS IN VARIATIONAL FORM	99
1 Multiplicity for Locally Lipschitz Periodic Functionals	99
2 The Multivalued Forced-pendulum Problem	106
3 Hemivariational Inequalities Associated to Multivalued Problems with Strong Resonance	111
4 A Parallel Nonsmooth Critical Point Theory. Approach to Stationary Schrödinger Type Equations in $\mathbb{R}^n$	122

5.	BOUNDARY VALUE PROBLEMS IN NON-VARIATIONAL FORM	139
1	The General Setting and Assumptions	139
2	Extremal Solutions of Quasilinear Parabolic Inclusion (5.1) 144	
3	Proof of the Existence Result in Proposition 5.1 and an Example	161
6.	VARIATIONAL, HEMIVARIATIONAL AND VARIATIONAL-HEMIVARIATIONAL INEQUALITIES	169
1	Hartman-Stampacchia Type Results for Hemivariational Inequalities	170
2	Variational-Hemivariational Inequality Problems with Lack of Convexity	178
3	Double Eigenvalue Hemivariational Inequalities with Non-locally Lipschitz Energy Functional	191
4	Applications	202
7.	EIGENVALUE PROBLEMS WITH SYMMETRIES	211
1	Orbits of Critical Points	211
2	Multiple Eigensolutions for Symmetric Functionals	219
3	Periodic Solutions of Hemivariational Inequalities. Multiple Eigensolutions	225
4	Multiple Solutions for a Double Eigenvalue Hemivariational Inequality with Constraints	233
8.	NON-SYMMETRIC PERTURBATIONS OF SYMMETRIC EIGENVALUE PROBLEMS	245
1	Non-symmetric Perturbations of Eigenvalue Problems for Periodic Hemivariational Inequalities with Constraints	246
2	Perturbations of Double Eigenvalue Problems for General Hemivariational Inequalities with Constraints	258
9.	LOCATION OF SOLUTIONS FOR GENERAL NONSMOOTH PROBLEMS	273
1	Existence of Solutions by Minimax Methods for Variational-Hemivariational Inequalities	273
2	Location of Eigensolutions to Variational-Hemivariational Inequalities	288
3	Location of Solutions to Nonlinear Dirichlet Problems	299

10. NONSMOOTH EVOLUTION PROBLEMS	307
1 First Order Evolution Variational Inequalities	307
2 Second Order Evolution Variational Equations	319
3 Stability Properties for Evolution Variational Inequalities	325
11. INEQUALITY PROBLEMS IN BV AND GEOMETRIC APPLICATIONS	349
1 The General Framework	350
2 Area Type Functionals	360
3 A Result of Clark Type	367
4 An Inequality Problem with Superlinear Potential	370
