Preface (M. Kužvart) 11

Part I (M. Kužvart) 17

1 Introduction 17
1.1 Literature on prospecting and exploration 20
2 Industrial types of mineral deposits 23

3 Geological criteria for ore prospecting 51
3.1 Stratigraphical criteria 52
3.2 Lithological criteria 54
3.3 Structural criteria 59
3.4 Magmatogenic criteria 87
3.4.1 The relationship between ore deposits and magma chemistry 87
3.4.2 The relationship between ore deposits and magma differentiation 90
3.4.3 Rock alterations in the neighbourhood of deposits as prospecting guides . . . 91
3.4.4 The relationship between ore deposits and the grain size of rocks 97
3.4.5 The relationship between ore deposits and the size of intrusions 98
3.4.6 The relationship between deposits and the internal structure of intrusions . . 100
3.4.7 The relationship between deposits and the depth of magma cooling 100
3.5 Metamorphogenic criteria 101
3.6 Geomorphological criteria 101
3.7 Palaeogeographical criteria 105
3.8 Palaeoclimatic criteria 110
3.9 Historical criteria 111

4 Geological prospecting methods and indications 113
4.1 Natural factors controlling the choice of prospecting methods 113
4.2 Geological ground prospecting methods 114
4.2.1 Prospecting for deposit outcrops 114
4.2.2 Prospecting for the mechanical aureoles (haloes) of ore fragments 122
4.2.3 Prospecting based on erratic ore boulders 123
4.2.4 Soil metallometry in glaciated terraine 126

5 Remote sensing in the search of mineral deposits 128

6 Phases of prospecting 134
6.1 Prospecting and exploration organizations 135

7 The geological prospecting-exploratory works on mineral deposits 137
7.1 Detailed geological mapping 137
7.2 Structural research of ore fields and ore deposits 142
7.3 Documentation of prospecting-exploratory works on mineral deposits 143
7.4 Economic assessment of the prospecting-exploratory results 144

8 Geochemical prospecting methods 147
8.1 Conceptual models in geochemical prospecting 148
8.2 Lithogeochemistry of solid rocks 150
8.2.1 Primary dispersion aureoles or haloes 153
8.2.2 Methods of lithogeochemical field work 155
8.3 Soil metallometry 157
8.3.1 Secondary dispersion aureoles or haloes 157
8.3.2 Work types and scales used 158
8.3.3 Some problems of metallometry 159
8.4 Stream sediments 160
8.4.1 Methods of field work 161
8.4.2 Laboratory treatment of samples 161
8.4.3 Interpretation of results and graphic illustrations 162
8.4.4 Revision of anomalies 162
8.5 Prospecting according to heavy mineral concentrates 163
8.6 Hydrogeochemical prospecting 165
8.7 Biochemical prospecting and geobotany 168
8.8 Atmogeochemical methods 173
8.9 Analytical methods used in geochemical prospecting 176
8.10 Treatment of geochemical data (V. Grym) 178
8.10.1 The method of the active sector 181
8.10.2 Basic conclusions of geochemical prospecting for deposits 182
8.10.3 The use of active sector in detailed evaluation 184
8.10.4 Applicability of mathematical method 186

9 Geophysical methods of prospecting for and exploration of metallic, non-metallic and coal deposits (J. Gruntorád) 187
9.1 The geophysics and plate tectonics 188
9.2 Physical properties of rocks (petrophysics) 190
9.3 Review of geophysical methods 198
9.4 The use of geophysical methods 205

10 Case histories of prospecting and exploration 234

11 Prospecting and exploration of oil and gas deposits (V. Homola) 241
11.1 Introduction 241
11.2 Fundamental research 244
11.3 Prospecting for oil traps 246
11.3.1 Main types of oil and gas traps 247
11.3.2 Oil- and gas-traps prospecting methods 263
11.3.3 Pioneer test boreholes 273
11.4 Exploratory (delineation) drilling 280
11.5 Drilling of producing wells 284

12 Prospecting for and exploration of mineral raw materials of seas and oceans 285
12.1 Mineral raw materials on the surface of sea floor 285
12.2 Mineral raw materials under the sea bottom 287
12.3 Prospecting and exploration of underwater minerals 288

Part II (M. Böhmer) 297

13 Preliminary and detailed exploration 297

14 Methods of subsurface exploration 299

15 Exploratory systems 302
15.1 Exploratory grids 310
15.2 The use of mining works and drilling in exploratory systems 312
15.3 Location of exploratory works 314
15.4 Delimitation of the deposit 317
15.4.1 Delineation of the deposit in the exploratory grid 317
15.5 Evaluation of an exploratory grid 325
15.6 Determination of the optimum density of exploratory grids 330
15.6.1 Determination by analogy 331
15.6.2 Comparison of exploration data with mining records 333
15.6.3 Gradual thinning of exploratory grid 333
15.6.4 Analysis of the accuracy of exploratory profiles 343
15.6.5 Mathematical-statistical methods 343
15.6.6 Determination of the optimum density of exploratory grids by modelling . . 346
15.6.7 The economics of exploration costs 346

16 Categories of mineral reserves and degrees of geological assurance of the deposit 349

17 Sampling 360
17.1 Chemical sampling 361
17.1.1 Sampling in underground workings 361
17.1.2 Sampling of exploratory drill holes 365
17.2 Mineralogical sampling 367
17.3 The initial sample weight and density of sampling 368
17.3.1 Combining basic samples 370
17.4 Preparation of samples for chemical analysis 371
17.5 Technological sampling 375
17.6 Control of sampling 376
17.7 Determination of the quality of raw materials based on physical properties 377

18 Geological documentation of mineral deposits 379
18.1 Basic geological documentation of exploratory works 379
18.2 Underground geological mapping 380
18.3 The use of photography in underground mapping 387
18.4 Documentation of exploratory drill holes 387
18.5 Documentary rock material 389
18.6 Construction of geological sections 390
18.7 Spatial illustration and models of mineral deposits 396

19 Hydrogeological and engineering-geological investigations of mineral deposits (I. Mucha) . . 398
19.1 Hydrogeological investigation on various types of deposits 399
19.2 Methods of hydrogeological investigation of mineral deposits 401
19.3 Engineering-geological problems in prospecting, exploration and working of mineral deposits 403

20 Exploration during mining operations 406

21 Prospecting and exploration of placer deposits 409
21.1 Preliminary and detailed exploration of placers 411
21.2 Exploratory systems 412
21.3 Methods of placer exploration 415
21.4 Sampling of placer deposits 415
21.5 Placer mining 425

22 Reserves calculation 427
22.1 Parameters and basic formulae of reserves calculation 428
22.1.1 Thickness 428
22.1.2 The content of the useful component 434
22.1.3 Volume unit weight 444
22.1.4 Area of deposit 445
22.2 Coefficients used in calculation of reserves 448
22.3 The methods of reserves calculation 450
22.3.1 The method of geological blocks 451
22.3.2 The method of exploitation blocks 453
22.3.3 The method of polygons 455
22.3.4 The method of triangles 457
22.3.5 The method of geological sections 457
22.3.6 The method of isolines 462
22.3.7 Statistical method 464
22.4 The operational reserves calculation 465
22.5 Calculation of the reserves of the accompanying mineral raw materials and trace elements 465
22.6 Accuracy of the reserves calculation 467
22.7 Development of reserves calculation 469
22.8 Reserves calculation report 470

23 Economic evaluation of mineral deposits 472

24 Literature 484

25 Index 497
