

# CONTENTS

<b>1. Introduction</b>	11
1.1 Macro- and microapproach	11
1.2 Aim of rheological investigations	13
1.3 Creep and the accuracy of its prediction	15
1.4 Limitations of rheological theories	18
1.5 Conception of the book	19
List of symbols	22
<b>2. Examples of the rheological behaviour of geomaterials</b>	27
2.1 Settlement of structures	27
2.2 Dam displacements	30
2.3 Slope displacements	32
2.4 Conclusion	36
<b>3. Structure and texture of soils</b>	37
3.1 Introduction	37
3.2 Mathematical and physical modelling of constitutive relations	44
3.3 Structural units	46
3.4 Fabric	61
3.5 Bonding	65
3.6 Internal stress	80
3.7 Structure of some tested soils	83
3.7.1 Zbraslav sand	83
3.7.2 Landštejn sand	84
3.7.3 Loess	84
3.7.4 Kyjice clay	85
3.7.5 Sedlec kaolin	85
3.7.6 Ďáblice claystone	85
3.7.7 Strahov claystone	87
3.7.8 Conclusion	90
3.8 Changes of soil structure	91

<b>4. State parameters of soils</b> . . . . .	93
4.1 Porosity . . . . .	94
4.2 Water content . . . . .	102
4.3 Stress and stress path . . . . .	106
4.4 Strain . . . . .	129
4.5 Time . . . . .	130
4.6 Temperature . . . . .	132
4.7 Conclusion . . . . .	135
<b>5. Elasticity, viscosity and plasticity</b> . . . . .	136
5.1 Introduction . . . . .	136
5.2 Elasticity . . . . .	141
5.3 Viscosity . . . . .	151
5.4 Plasticity . . . . .	154
5.4.1 Introduction . . . . .	154
5.4.2 Rigid-plastic approach . . . . .	156
5.4.3 Modelling of constitutive behaviour . . . . .	157
5.4.4 Plastic potential approach . . . . .	157
5.4.5 Other physically motivated concepts . . . . .	166
5.4.6 Rate-type relations . . . . .	168
5.5 Concluding remarks . . . . .	169
<b>6. Experimental rheology</b> . . . . .	173
6.1 Introduction . . . . .	173
6.2 Water content and temperature fluctuations . . . . .	174
6.3 Choice of the apparatus . . . . .	177
6.4 Evaluation of the experimental results . . . . .	184
<b>7. Macrorheology</b> . . . . .	201
7.1 Introduction . . . . .	201
7.2 Method of rheological models . . . . .	202
7.3 Method of integral representation . . . . .	217
7.4 Empirical relations . . . . .	228
<b>8. Microrheology</b> . . . . .	231
8.1 Introduction . . . . .	231
8.2 Micromechanical approach . . . . .	232

8.3 Particle-based conception . . . . .	263
8.3.1 Fabric as the principal constitutive factor . . . . .	263
8.3.2 Mixed analysis . . . . .	265
<b>9. Primary and secondary consolidation . . . . .</b>	<b>266</b>
9.1 Introduction . . . . .	266
9.2 Primary consolidation . . . . .	268
9.3 Secondary consolidation . . . . .	276
9.4 Conclusion . . . . .	290
<b>10. Long-term strength of soils . . . . .</b>	<b>293</b>
10.1 Introduction . . . . .	293
10.2 Stress – long-term strain diagrams . . . . .	295
10.3 Long-term strength . . . . .	298
10.4 Creep failure (rupture) . . . . .	306
10.5 Conclusion . . . . .	315
<b>11. Creep and stress relaxation . . . . .</b>	<b>317</b>
11.1 Creep . . . . .	317
11.2 Stress relaxation . . . . .	344
11.3 Conclusion . . . . .	347
<b>12. On numerical solution of rheological problems (Marta Doležalová) . . . . .</b>	<b>348</b>
12.1 Introduction . . . . .	348
12.2 Numerical methods . . . . .	349
12.2.1 Numerical methods in geomechanics . . . . .	349
12.2.2 Finite element method . . . . .	351
12.2.3 Nonlinear techniques . . . . .	354
12.2.4 Path-dependent constitutive model . . . . .	357
12.3 Numerical modelling of creep . . . . .	360
12.3.1 Review . . . . .	360
12.3.2 Algorithms for computing creep by FEM . . . . .	363
12.4 Applications . . . . .	368
12.4.1 Dams . . . . .	368
12.4.2 Tunnels . . . . .	374
12.5 Conclusions . . . . .	384

<b>13. Concluding comments</b> . . . . .	386
<b>Appendix 1</b> . . . . .	389
<b>Appendix 2</b> . . . . .	393
<b>Bibliography</b> . . . . .	397
<b>Author index</b> . . . . .	413
<b>Subject index</b> . . . . .	418
