

CONTENTS

Plenary Speakers	39
Roberto Cavaliere Integrating Mathematica in Education and Research	41
Mauro Francaviglia General Relativity at the Turn of the Third Millennium	43
Bert Jüttler Advances of geometric representations with high approximation power	44
Zaven A. Karian Fitting Statistical Distributions to Data	45
Luděk Kučera A power efficient connection in an ad-hoc wireless network	46
Zdeněk Ryjáček Closure concepts and closure techniques in Hamiltonian graph theory	48
Papagudi V. Subrahmanyam Some Aspects of Newton's Method for the Solution of Nonlinear Equations	49
Peter Takáč A Stochastic Volatility Model for Stock Pricing	50
Academic Sessions	51
Sukru Acitas A Comparison of Some Partially Adaptive Estimators of Regression Models	53
Chouakri Sid Ahmed ECG Baseline Wandering Removal Based on the Discrete Wavelet Transform	54
Olga Alexandrova The first integrals for the stochastic system	55

Mahmoud Anabtawi	
Stability and Convergence Results for Ito-Type Parabolic Differential Equations in Hilbert Spaces-Lyapunov-Like Functions.....	56
M. Z. Anis	
On Testing Exponentiality Against DMRL Alternatives coauthors....	57
A. Asgharzadeh	
Bayesian Analysis of the Generalized Logistic Distribution with Unknown Scale and Shape Parameters.....	58
Petre Babilua	
On an Integral Square Deviation Measure with the Weight of "Delta-Functions" of the Rosenblatt-Parzen Probability Density Estimator.....	59
Ayman Baklizi	
Bayesian Inference for $Pr(X < Y)$ in the Two Parameter Exponential Distribution Based on Records.....	60
Gábor Bacsó	
The structure of dominating sets.....	61
Hani Benhassine	
A FETI-like Domain Decomposition Domain Method For The Stokes Problem.....	62
Marek Byrtus	
On PH cubics.....	63
Roman Čada	
On cyclability in prisms.....	64
Mark Carpenter	
Multivariate Time-Varying Data Analysis.....	65
Maya Chhetri	
Existence and Nonexistence of Positive Solutions For a Class of Superlinear Semipositone Systems.....	66
Don Collins	
Research Exponentiality Against DMRL solution trying by error....	67

Peter Dalgaard	
Strengths and weaknesses of the R language for statistical computing	68
Pankaj Kumar Das	
s-Alternate Error Correcting Linear Codes	69
Petr Dostál	
Almost Optimal Trading Strategies for Small Transaction Costs and a Hara Utility Function	70
Jan Ekstein	
Hamiltonian Cycles in the Square of a Graph	71
Seiji Fujino	
A preconditioning of CG method based on AGM (Arithmetic-Geometric Mean) of eigenvalues	72
C. P. Gandhi	
Two New Generalized Information Theoretic Measures Based Upon Probability Distributions	73
Mohamed Amine Ghezzer	
Rigid body exhibiting stochastic dynamics	74
Luis Miguel Grilo	
Mixtures of Generalized Integer Gamma Distributions as the Exact and Near-exact Distributions for the Generalized Wilks Lambda Statistic	75
Kristýna Hadašová	
Modern Numerical Methods for Solving Shallow-Water Equations	76
Milan Hanuš	
Mathematical methods in neutron transport	77
Přemysl Holub	
On Distance Chromatic Number of Grids and Trees	78
Torsten Hothorn	
'mboost': A Package for Model-based Boosting	79

Hiroto Hyakutake	
Multiple comparisons with a control when the treatments are correlated	80
Ross Iaci	
Multivariate Association and Dimension Reduction: A Generalization of Canonical Correlation Analysis	81
Y. S. Il'yasov	
Constructive and algorithmic concept of the bifurcations finding to solutions of the nonlinear equations	82
Zaven A. Karian	
Symbolic Computation in Probability and Statistics	83
Andrea Karlová	
Focker-Plank Equation in Option Pricing	84
Hana Kopincová	
On finite volume methods for river flow problems	85
Nir Kshetri	
Determinants of Internet Diffusion: Evidence from Global Country-Level Data	86
Anil Kumar	
Performance Study on Effect of Cognitive States on Heart Rate and Respiration Rate	87
Anil Kumar Gupta	
Blood Flow Finite Element Solution Through the Carotid Artery with Magnetic Effects	88
Sanjeev Kumar	
Premium Allocation — Fuzzy Approach in Insurance Business	89
Surender Kumar	
Application of stochastic catastrophe theory to reservoir management	90
Coenraad Labuschagne	
Doob's Decomposition of Set-valued Submartingales Via Ordered Near Vector Spaces	91

Aihua Li	
Interlace Polynomials of Snowflake Graphs.....	92
Marcella Giulia Lorenzi	
Art & Mathematics at the Crossroad: Scientific Scenarios and Art in the European Project “Scienar”	93
Patrice Marek	
Parameter Estimation of Spatial Poisson Process in Domain with Unknown Boundary	94
Susana Luísa da Custódia Machado Mendes	
Spatio-Temporal Structure of Diatoms Species in Coastal Areas of Portugal: A Three-Way Study.....	95
Rui Menezes	
Stock Market Globalization: Evidence from the G7	96
Michal Merta	
Newmark Method for Numerical Realization of Initial Problems of the 2nd Order.....	99
Nutan Mishra	
Group Divisible Designs With Two Groups and Block Size Five With Fixed Block Configuration.....	100
Hakeem Ahmed Othman	
On Fuzzy Semi Alpha-Separation Topological Spaces.....	101
D. S. Pathania	
Some Linear Vibration Problem in Elasticity.....	102
Ondřej Pokora	
Optimal Odor Intensity in Simple Olfactory Neuronal Models	103
Nicolae Pop	
Air Quality Assessment in Baia Mare Area by Statistical Analysis... ..	104
Sofia Portela	
Analysing the Customer Churn Risk using Duration Models.....	105

Davood Poursina	
An Examination of the Effect of An Examination of the Effect of Discretization on a Naive Bayes Model's Performance	106
Miklós Rontó	
Investigation of Solutions of Some Linear Functional-Differential Equations With Three-Point Boundary Conditions of Cauchy-Nicoletti Type.....	107
Jan Rychtář	
Math-Biology Projects at UNCG	108
Alexander Ryvkin	
Electron-Conformational Model of the Ryanodine Channel in a Cardiac Cell. Kinetic properties	109
Nora Saadi	
Truncated Projection Density Estimation	110
Khikmat Saburov	
Claw free 3-connected Z_6 -free graphs are Hamiltonian.....	112
Valeria Sambucini	
Confidence Regions for the Stationary Point of a Response Surface ..	113
Kateřina Samková	
Surfaces and their representation and approximation for technical applications.....	114
Ratna Dev Sarma	
Generalized Open Fuzzy Sets	115
Arvind Shrivastava	
Bayesian Analysis of a Multivariate Regression Model with Structural Change.....	116
Swapnil Srivastava	
MHD Flow of a Dusty Viscous Fluid in a Rotating Channel.....	117
P. V. Subrahmanyam	
On the Integrable Solutions of a Functional Equation	118

Neeraj Tiwari On Two Dimensional Optimal Controlled Nearest Proportional to Size Sampling Designs	119
Tomáš Āoupal Spatial Poisson Process Parameter Estimation Using Information about Subset	120
Zsolt Tuza Hypergraph coloring: Recent models	121
S. K. Upadhyay Certain Modelling Issues in Parametric Statistical Reliability: A Bayes Study	122
Ilhan Usta Empirical analyses of index return distributions for the Turkey stock exchange	123
Zbyněk Vastl Parallel solver of $Ax = b$ in system Mathematica	124
Richa Vatsa The Variational Bayes Method with its Application to Complex Problems eg. Palaeoclimate Reconstruction, GLM and Multimodality	125
Zbigniew Walczak Remarks on Some Variant of Discrete Operators	126
Adil E. Yousif Time Series Analysis For Air Quality in Doha	127
Jan Zapletal The Boundary Element Method for Inner and Outer Boundary Value Problems in 2D	128
