

Content

1	INTRODUCTION	7
2	THEORETICAL SECTION.....	9
2.1	Gypsum.....	9
2.1.1	Characteristics of gypsum.....	9
2.1.2	Sources of gypsum.....	10
2.1.3	Production of gypsum.....	11
2.1.4	Types of gypsum binders.....	14
2.1.5	Setting of gypsum.....	15
2.1.6	Hardened gypsum.....	18
2.1.7	Modification of gypsum.....	28
2.2	Gypsum materials and products	31
2.2.1	Gypsum mortars and concretes.....	31
2.2.2	Gypsum blocks	32
2.2.3	Gypsum plasterboards and gypsum fibre boards.....	33
2.2.4	Foamed gypsum.....	33
2.3	Formulation of a gypsum composite	39
2.3.1	Components of a gypsum composite.....	40
2.3.2	Optimization of a multi-component mixture	41
3	AIM OF WORK.....	46
4	EXPERIMENTAL SECTION.....	47
4.1	Used raw materials and chemicals	47
4.2	Instruments and equipment used.....	53
4.3	Experimental methods and testing procedures.....	53
4.4	Survey of prepared compositions	56

5	RESULTS AND DISCUSSION	69
5.1	Composition based on gypsum Koberice.....	72
5.1.1	Modification of gypsum paste properties	72
5.1.2	Choice of a foaming system.....	76
5.1.3	Sequential optimization of bulk density and strength.	82
5.2	Compositions based on gypsum Rigips.....	87
5.2.1	Reinforcement with fibres	88
5.2.2	Foamed composites with a granular mineral admixture 89	
5.2.3	Formulation of an acid foaming agent.....	94
5.2.4	Monitoring of other properties.....	98
5.2.5	Sequence optimization of a point criterion	101
5.2.6	Perlite-foam composite	106
5.2.7	Optimization of material costs.....	107
6	CONCLUSIONS.....	114
7	REFERENCES.....	116

KEY WORDS: Foamed Gypsum, Hemihydrate, Dihydrate, Simplex Optimization, Porosity, Formulation

ACKNOWLEDGEMENT: This research has been supported by Czech Ministry of Education, Youth and Sports, under project No. **MSM 6840770031**
