

TABLE OF CONTENTS

		Page
	ABBREVIATIONS	9
	INTRODUCTION	10
1	THE INDUSTRIAL REVOLUTION AND ITS CONSEQUENCES	15
2	DEVELOPMENT MOTIVES OF THE THEORY OF ENVIRONMENTALLY COMPATIBLE STRUCTURES (ECS)	19
2.1	Environmental Impact of the Industrial Growth in the 20 th and 21 st Centuries	19
2.2	Environmental Impacts of Buildings and Civil Engineering Structures	20
2.3	Focus of the Textbook	21
2.4	(E-C) Factor Reflecting the Extra Cost of EC Buildings	23
3	THEORY OF ECS	26
3.1	Concept of the Theory of ECS	26
3.2	Three Principles of the Theory of ECS - General Comments	28
3.3	Comments to the Three Principles of the Theory of ECS	33
3.4	Design Characteristics (DCH) as Practical Design Tools of the Theory of ECS	35
3.4.1	Concept of the DCH	35
3.4.2	Design Characteristics of Common and Special Buildings - DCH of Indoor Facilities and Reconstructions	39
3.4.3	Comments to the DCH's	44
3.4.4	Research, Experimental Studies and Development in the Field of ECS	44
3.5	Analytical and Non-analytical Optimization of the DCH's	45
3.5.1	Commentary on Engineering and Environmental Optimization	46
3.5.2	Comments on the Environmental Effect of Greenhouse Gas Emissions	47
3.6	Environmental Impact of Structural Forms and Systems	49
3.6.1	Introduction	49
3.6.2	Definitions	51
3.6.3	Impact of the Structural Form on the Environmental Compatibility of Structures	53
3.6.4	Physical Geometry (PhG) - a New Concept of Form-finding Process	57
3.6.5	Examples of Physically Defined Forms (PhDF) in Structural Engineering, Architecture and in Nature	61
3.6.6	Examples of Physically Defined Structural Forms (PhDF) Generated by Nature or Applied in Structural Design	76
3.6.7	Physically Defined Forms in Hydrotechnics and Futurology of Structural Forms	84
4.1.4	Conclusions to EC Bridges	82

3.7	Energy Production and CO ₂ Emission Interrelationship	86
3.7.1	Carbon Containing Fuels	85
3.7.2	Production of Carbon Dioxide	85
3.7.3	Production of Energy	86
3.7.4	Energetic Efficiency	86
3.7.5	Relation between Carbon Dioxide Emission and Energy Production	87
3.8	Sustainable Electricity Generation with Solar Updraft Towers	88
3.8.1	Introduction	88
3.8.2	The Solar updraft Tower – a Solution for Sunny Countries	89
3.8.3	Investment Cost and Levelised Electricity Cost	96
3.8.4	Ecological Analysis	96
3.8.5	Conclusion	98
3.9	Principles and Strategies for Achieving Environmental Compatibility in Rehabilitation of Structures	98
3.9.1	Principles and Strategies for Environmentally Compatible Renovations	99
3.9.2	Ratio of Primary to Secondary Structure	100
3.9.3	Comments	102
3.10	Primary and Secondary Structural Parts – Comments on Quantifying the Environmental Impact Assessment (EIA)	102
3.10.1	Introduction	102
3.10.2	Methods Using LCA	103
3.10.3	Credit Based Methods	103
3.10.4	Some Comments on the Environmental Assessment Methods for Buildings	108
3.10.5	Incorporating the LCA Methods into the Credit Based Methods	108
3.11	Environmentally Compatible Structural Materials (ESCM) - European Experience	112
3.11.1	Environmental Aspects of Materials	112
3.11.2	Wood - Timber	114
3.11.3	Natural Stones	116
3.11.4	Clay Products - Ceramics	117
3.11.5	Binders	118
3.11.6	Concrete	119
3.11.7	Mortar and Plaster	119
3.11.8	Autoclaved Masonry Elements	120
3.11.9	Metals	120
3.11.10	Glass	122

3.11.11	Insulation Materials	122
3.11.12	Covering and Cladding Materials	124
3.11.13	Plastic	125
3.11.14	Bitumen	126
3.11.15	Natural Materials	126
3.11.16	Indicators of Material Production	127
3.12	Environmentally Compatible Structural Materials (ESCM) - Canadian experience	129
3.12.1	Introduction	129
3.12.2	Embedded Energy of Common Structural Materials	130
3.12.3	Embodied Energy and Effectiveness of Materials	133
3.12.4	Greenhouse Gas and Structural Materials	134
3.12.5	Greenhouse Gas and Effectiveness of Materials	135
3.12.6	Embedded Energy and Thermal Efficiency	135
3.12.7	Greenhouse Gas and Thermal Efficiency	136
3.12.8	Multi Functional Materials and Assemblies	136
3.12.9	Whole Life Environmental Impact	136
3.12.10	Materials Selection and the Quality of Life	137
3.12.11	Conclusion	138
3.13	Design of environmentally compatible structures with regard to accidental fires	138
3.13.1	Introduction	138
3.13.2	Analysis of Fires and Fire Scenarios in Relation to ECS	138
3.13.3	Toxic Products and Environmental Pollution Released during a Fire	141
3.13.4	Principles for the Application of Building Materials in Load-bearing Environmentally Compatible Structures	143
3.13.5	Fire Protection of Building Structures and its Environmental Effects	146
3.13.6	Fire-Suppressing Board Lining	149
3.13.7	Glued Linings of Mineral Fibers	152
3.14	References	152
4	ENVIRONMENTALLY COMPATIBLE BRIDGE AND HYDRAULIC STRUCTURES	157
4.1	Environmentally Compatible Bridge Structures	157
4.1.1	Traditional Design of Bridges and the Way to ECS	157
4.1.2	Selecting of Bridge Structures Considering Environmental Compatibility	158
4.1.3	Some Important Aspects of Environmentally Compatible Bridges	169
4.1.4	Conclusion to EC Bridges	182

4.2	EC Hydraulic Structures	183
4.2.1	Introduction	183
4.2.2	Fundamental Differences between the Classic Design Procedure of River Hydraulic Structures and the Design Procedure of ECS	185
4.2.3	EC Design Procedures	187
4.2.4	Global Lasting Dynamic Equilibrium	187
4.2.5	Dam Service Life	189
4.2.6	Exploitation of Natural Resources in Dam Construction	190
4.2.7	Embankment Dams	190
4.2.8	Concrete Dams	192
4.2.9	Demands for Concrete in Massive Dams with Gravity Effect	192
4.2.10	Overflow, Outlet and Intake Dam Structures	196
4.2.11	Physically Defined Surfaces in Hydraulic Engineering	196
4.2.12	Examples	198
4.2.13	Summary and recommendations	204
4.3	References	206
5	CASE STUDIES OF ECS	208
5.1	Environmentally Compatible Structures in Canada	208
5.1.1	Buildings in Canada	208
5.1.2	Characteristics of Three Structural Systems Commonly Used in Canada	209
5.1.3	Comments on the Environmental Compatibility of Systems A, B and C	213
5.2	Environmentally Compatible Structures in Japan	216
5.2.1	The Characteristics of Environmentally Compatible Structures in Japan	216
5.2.2	The Current Techniques for ECS Construction in Japan	216
5.2.3	The assessment methods of ECS techniques in Japan: CASBEE	217
5.2.4	Examples of environmentally compatible structures in Japan [11]	218
5.2.5	Concluding remarks	224
5.3	References	224
