Preface	5
1 Postural sway response to different forms of exercise	7
1.1 Postural sway response to exercises with different energy yield from anaerobic glycolysis while eliciting the same heart rate	9
1.2 Postural sway response to exercises of moderate intensity with different duration	13
1.3 Postural sway response to different forms of resistance exercise	14
1.4 Postural sway response to resistance exercises with different intensity of proprioceptive stimulation eliciting the same ventilation	17
1.5 Postural sway response to different types of exercise eliciting the same ventilation	19
1.6 Postural sway response to exercises with different forms of muscle contraction	23
1.7 Postural sway response to “all-out” exercises with different activation of muscle fibers	25
1.8 The effect of maximal exercise on static and dynamic balance	27
1.9 The effect of jumping on visual feedback control of body position	29
Overview of findings	33
2 Postural sway during and after sport-specific exercises	49
2.1 Postural sway during standing on supports of different widths	50
2.2 Postural sway during two-handed and two-legged stances	51
2.3 Postural sway during standing on supports of different heights	52
2.4 Postural sway during standing with different ankle joint fixation	54
2.5 Postural sway during rifle shooting	56
2.6 Postural sway during free throw shots	57
2.7 Postural sway during weight lifting	58
2.8 Postural sway after rotational exercises	59
2.9 Postural sway after judo falls	61
2.10 Postural sway after different forms of dancing performance	62
2.11 Postural sway after rebound jumps	64
2.12 Postural sway after intermittent and continual exercise	67
2.13 Postural sway after soccer match	71
Overview of findings	73
Concluding comments	75
References	76
