Preface

1 Introduction and basic characteristics	7
1.1 Modern building materials	10
1.2 Role of fibers	11
1.3 Fabrication	12
1.4 Various applications	12
1.5 Composite properties	12
1.6 Long-term performance of alkali-resistant, glass-fiber-reinforced concrete	13
1.7 Environmental Factors	15
2 Modern investigation in composite materials based on interaction of concrete and fibers	17
2.1 Composites reinforced by glass fibers	17
2.2 Composites reinforced by steel fiber	20
3 Damage in fiber reinforced concrete beams	25
3.1 Steel fibers	27
3.2 Polypropylene and Modified Polypropylene fibers	28
3.3 Examples	28
3.4 Fundaments of numerical considerations	33
4 Overall material properties of glass fiber reinforced Concrete	41
4.1 Macromechanical properties of poroelastic fiber reinforced concrete	41
4.2 The Representative volume element (RVE) at the three-level microstructure	42
4.3 Estimation of the elastic properties in the three-level Microstructure	47
4.4 Computation of overall material properties by BEM	52
5 Pullout problem of a steel FRC beam	55
5.1 Formulation of the problem	56
5.2 Examples	58
6 Mechanical behaviors of FRC beams with one-sided moistened surface	65
6.1 Preparation of the experiment	66
6.2 Experiments	71
6.3 Time-dependent changes in fiber reinforced concrete during the curing	74

7 Aging of reinforced mortars and concretes; coupled modeling	77
7.1 Pseudo three-dimensional theoretical model	78
7.2 Relations in a single layer	78
7.3 Overall response of the cylindrical structure	78
7.4 Experimental results	83
8 Optimal shapes of curvilinear fibers in FRC	91
8.1 Examples	92
9 Nanomechanics of fiber reinforced concrete	103
9.1 Chemical structure on nanolevel	103
9.2 Microlevel	108
9.3 Example	110
10 Raman microspectroscopy of cement-steel interfaces during hydration	113
10.1 Change of chemical properties	113
10.2 Pullout test	115
11 Stochastic homogenization of steel fiber reinforced Concrete	117
11.1 Extended Hashin Shtrikman variational principles	118
11.2 Randomly distributed phases	121
12 Final words	125
References	127
