CONTENT	5
1 INTRODUCTION	7
1.1 SCENARIOS OF LANDUSE CHANGE AND THE ASSESSMENT OF LAND USE CHANGE IMPACT ON RUNOFF WITH HYDROLOGICAL MODELS.....	7
1.2 SIMULATING THE GENESIS OF EXTREME FLOODS AND FLOOD SCENARIOS FOR FLOOD PROTECTION AND CONTROL IN GAUGED AND UNGAUGED BASINS.....	9
2 HYDROLOGICAL RAINFALL-RUNOFF MODELS	13
2.1 MODELS DESCRIPTION	13
2.1.1 <i>The WETSPA/FRIER models</i>	13
2.1.1.1 <i>General description of the models</i>	13
2.1.1.2 <i>Land-use parameterization in the WetSpa and FRIER rainfall-runoff models</i>	15
2.1.2 <i>The HRON model</i>	17
2.1.3 <i>The KLEM Model</i>	21
3 CASE STUDIES	23
3.1 LANDUSE CHANGE	23
3.1.1 <i>The Poprad River case study</i>	26
3.1.2 <i>The Kysuca River case study</i>	32
3.1.3 <i>Inter-basin comparison for river basins in south Slovakia with the WetSpa model</i>	35
3.1.4 <i>The Hron River cases study</i>	43
3.2 CHANGES IN DESIGN DISCHARGES BY RAINFALL-RUNOFF MODELING USING PRECIPITATION SCENARIOS	49
3.2.1 <i>Myjava River case study</i>	52
3.2.2 <i>The Teplica River case study</i>	59
3.3 FLASH FLOODS IN UNGAUGED BASINS	62
3.4 CASE STUDIES	64
3.4.1 <i>The Malá Svinka and Dubovický creeks</i>	64
3.4.2 <i>The Svacenický Creek</i>	70
4 CONCLUSION	74
5 REFERENCES	77
