

Contents

Keith Beven

Uncertainty in hydrological modelling: Further discussion of equifinality, likelihood measures and information content 3

Thomas R. Kjeldsen, David A. Jones

Prediction uncertainty in index flood modelling at ungauged catchments 9

Mikhail Bolgov, Nadezhda Osipova

Regionalization in flood frequency analysis 15

Sarka Blazkova, Keith Beven

Flood frequency estimation at the Skalka catchment using continuous simulation with uncertainty 21

Thomas Skaugen

Modelling the dynamics of discharge as a function of river network and shape of catchment area 27

Michel Lang, Aurélie Muller, Patrick Arnaud, Jacques Lavabre

Comparison of uncertainties in extreme rainfall distribution using a GP distribution and the SHYPRE regional stochastic rainfall model 33

Alberto Montanari

Uncertainty estimation in hydrological forecasting: should we use statistics? 41

Ladislav Kašpárek, Oldřich Novický

A method for reducing uncertainty in water balance simulation 51

Mikhail Bolgov

Bayesian decision for low flow evaluation in non-stationary conditions 57

Ladislav Kašpárek, Oldřich Novický

Approaches for drought analysis and their application 63

Renata J. Romanowicz, Adam Kiczko, Jarosław J. Napiórkowski

A stochastic transfer function model applied to combined reservoir management and flow routing modelling: Upper Narew case study 69

Miroslav Rudiš, Petr Valenta, Ondřej Nol

Fate of pollution from sediments re-suspended during catastrophic flood on quality of environment of the flood plain 75

Florian Pappenberger

Linking ensemble prediction systems of weather forecasts to hydrology within the PREVIEW project 83
