List of symbols	6
CHAPTER 1. Introduction	9
1.1 Definitions	9
1.2 Classification of cavitation	10
1.3 Adverse effects of cavitation	11
1.4 Utilization of cavitation	12
CHAPTER 2. Current state of knowledge	14
2.5 Balance equations	14
2.5.1 General balance equation	14
2.5.2 Balance of mass	16
2.5.3 Balance of momentum	17
2.5.4 Balance of total energy	18
2.5.5 Constitutive relations	18
2.6 Laser-induced breakdown	19
2.6.1 Main effects accompanying LIB in aqueous media	19
2.6.2 Plasma dynamics	22
2.7 Cavitation bubble dynamics	25
2.7.1 Rayleigh-Plesset equation	26
2.7.2 Bubble stability	27
2.7.3 Bubble collapse	30
2.7.4 Dynamics of cavitation bubble in compressible liquid	31
2.7.5 Influence of viscosity and surface tension on bubble dynamics	33
2.7.6 Dynamics of non-spherical bubble	34
2.8 Theory of shock waves	36
2.9 Regular and retrograde fluid	43
CHAPTER 3. Experiment and measurement	44
3.1 Measurement methods and experimental devices	44
3.1.1 Basic principle of lasers - types of lasers	44
3.1.2 Principles of optical methods used in measurements	46
3.1.3 Methods of the shock wave and bubble measurements	47
3.1.4 Single and multi-exposure recording	48
3.2 Experimental setups	50
3.2.1 Experimental setup using Tm-Yag laser	50
3.2.2 Experimental setup using Nd-Yag laser	51
3.3 Measurement results	54

3.3.1	Results of measurements using the Tm-Yag laser	54
3.3.2	Results of measurements using the Nd-Yag laser	57
3.3.3	Cavitation bubble collapse near a solid wall and in free liquid	62
3.3.4	Cavitation bubble rising in glycerine	63
3.4	Summary of the measurement results	65
CHAPTER 4. Problem solution		67
4.1	General strategy	67
4.2	Physical model	69
4.2.1	Plasma growth modelling	69
4.2.2	Application of the compressible model of the bubble dynamics	70
4.2.3	Pressure and velocity fields in the liquid surrounding the bubble	72
4.3	Energy distribution	74
4.3.1	Shock wave energy	74
4.3.2	Cavitation bubble energy	75
4.3.3	Energy of evaporation of the bubble content	76
4.3.4	Energy radiated by plasma	76
4.4	Semi-empirical solution of the shock wave propagation	76
4.5	Cavitation bubble in glycerine	81
CHAPTER 5. Results		84
5.1	Numerical simulation of the laser induced bubble dynamics	84
5.2	Numerical simulation of the pressure and velocity field	86
5.3	Evaluation of the shock wave pressure-time profiles	89
5.4	Numerical simulation of energy dissipation at the shock wave	90
5.5	Energy distribution during the bubble growth and collapse	92
5.6	Density of cavitation bubble rising in glycerine	92
5.7	Numerical simulation of bubble collapse	92
