

# Contents

<b>Chapter 1</b> .....	12
Introduction.....	12
1.1 Parallel Architectures.....	13
1.2 State of the Art.....	15
1.3 Overview of the Following Chapters.....	17
<b>Chapter 2</b> .....	18
Interconnection Networks.....	18
2.1 Basics in Interconnection Networks .....	20
2.1.1 Packet and Message .....	20
2.1.2 Topology.....	21
2.1.3 Routing.....	27
2.1.4 Routing Model .....	27
2.1.5 Flow Control.....	29
2.2 Deadlock, Livelock and Conflict.....	31
2.3 Case Study: Intel Tera-scale .....	32
<b>Chapter 3</b> .....	36
Switching Techniques.....	36
3.1 Circuit Switching .....	37
3.2 Store and Forward Switching .....	38
3.3 Virtual Cut-Through Switching.....	40
3.4 Wormhole Switching .....	41
<b>Chapter 4</b> .....	43
Routing Algorithms .....	43
4.1 Taxonomy of Routing Algorithms.....	44
4.2 Deterministic Routing.....	45

4.3	Oblivious Routing.....	46
4.4	Adaptive Routing.....	47
4.5	Routing in Irregular Topologies .....	49
4.5.1	Up*/Down* Algorithm.....	49
4.5.2	Adaptive Routing Algorithm for Irregular Network.....	50
<b>Chapter 5</b>	.....	<b>52</b>
Collective Communication .....		52
5.1	Multiple One-to-One Communication.....	53
5.2	One-to-All Communication .....	54
5.3	All-to-One Communication .....	54
5.4	All-to-All Communication.....	55
5.5	Many-to-Many Communication .....	56
5.6	Convenient Collective Communication Services .....	58
5.7	Models of Communication .....	58
<b>Chapter 6</b>	.....	<b>61</b>
Design of New Evolutionary Optimization Techniques.....		61
6.1	Basics of Classical Genetic Algorithm .....	62
6.2	Simulated Annealing.....	63
6.2.1	Control Parameters of Simulated Annealing .....	64
6.2.2	Parallelization of SA .....	65
6.2.3	Design of a New Parallel SA .....	66
6.3	Hybridization of Evolutionary Algorithms.....	73
6.3.1	A Short Survey of Hybrid Parallel Simulated Annealing Using Genetic Operators.....	74
6.3.2	Design a New Hybrid Parallel Genetic Simulated Annealing (HGSA) ....	74
6.3.3	General Differences between New HGSA and Other Approach of SA and GA Aggregation.....	75
6.4	Experimental Results .....	76
6.5	Summary.....	78
<b>Chapter 7</b>	.....	<b>80</b>
Evolutionary Design of Collective Communication.....		80
7.1	Model of Communication.....	82
7.2	Methodology of Design of Optimal Communication Schedules.....	83
7.2.1	Searching of Conflicts .....	83
7.2.2	Prediction of Conflicts.....	84
7.3	Input Data .....	87

7.4	Search of The Shortest Paths .....	88
7.5	Solution Encoding.....	89
7.6	Definition of Fitness Function .....	91
7.6.1	The Fitness Function Based on Searching of Conflicts.....	91
7.6.2	The Fitness Function Based on Prediction of Conflicts .....	92
7.7	Heuristic.....	94
7.8	Generalization of New Proposed Algorithm .....	95
7.8.1	Fat Topologies .....	95
7.8.2	Many-to-Many Broadcast Communication .....	96
7.9	Analyze of Proposed Algorithm .....	98
7.10	Experimental Results .....	102
<b>Chapter 8</b>	.....	<b>115</b>
Conclusion and Future Research Directions.....		115
8.1	Future Research Directions.....	117
<b>Bibliography</b> .....		<b>118</b>
Author publications.....		123
Appendix A.....		125
Appendix B.....		130
Appendix C.....		133
Appendix D.....		134
Appendix E.....		136
Appendix F .....		138
Appendix G.....		144
