List of figures	xi
List of tables	xv
Profiles	xvi
Preface	xvii
1 Introduction	1
A brief history of evolutionary ideas	3
The organization of the book	11
Chapter summary	14
Chapter discussion	14
2 Background: concepts of evolution and genetics	16
Introduction	16
Genetics and microevolution	28
The chemical basis of life	28
Genetics	37
Microevolution	47
The synthetic theory of evolution	53
Chapter summary	54
Chapter discussion	54
3 Molecular genetics, genomics, and human genetics	57
A closer look at chromosomes	57
Extrachromosomal genetics	65
Tracing genetic variability and function	70
Human genetics and the human genome	74
Chapter summary	78
Chapter discussion	79
4 Macroevolution and taxonomy	82
Taxonomy	82
Macroevolution	91

Chapter summary	110
Chapter discussion	111
5 Race and human variation	114
Race	114
Phenotypic characteristics of human variability	126
“Race” and intelligence	143
Patterns of human variability	147
Chapter summary	147
Chapter discussion	148
6 Human biological variation in the skeleton and dentition: a window on the past	152
Introduction to skeletal biology	152
Paleodemography	160
Individual and population differences in the skeleton	161
Trace elements in bony tissue	168
Forensic anthropology	169
Paleopathology	173
Ethical concerns	175
Chapter summary	176
Chapter discussion	176
7 Genotypic traits	181
Genotypic traits traditionally used in human biology	181
Genetic traits from contemporary molecular biology used in human biology	195
Chapter summary	202
Chapter discussion	203
8 Tracing human population affinities and migrations	207
Tracing the origins of modern <i>Homo sapiens</i>	207
Tracing the movements of modern <i>Homo sapiens</i>	211
Conclusion	226
Chapter summary	227
Chapter discussion	227
9 Demography: populations, reproduction, and mortality	235
Population ecology	235
Demography of human populations	241
Human population growth	252
Chapter summary	258
Chapter discussion	259

10 Life span: growth and development	262
<i>The general pattern of human growth</i>	262
<i>Growth of specific body parts</i>	271
<i>Growth after birth: population differences</i>	277
<i>Growth and development: a final consideration</i>	283
<i>Chapter summary</i>	284
<i>Chapter discussion</i>	284
11 Life span: aging and senescence	289
<i>The biology of senescence</i>	289
<i>Theories of senescence</i>	297
<i>The human population biology of senescence</i>	303
<i>Can we "cure" senescence?</i>	311
<i>Conclusion</i>	314
<i>Chapter summary</i>	314
<i>Chapter discussion</i>	314
12 Human adaptability to physical stressors	322
<i>Limiting factors, tolerance, and environmental physiology</i>	322
<i>Adaptation to cold and heat</i>	328
<i>Adaptation to high altitude</i>	341
<i>High activity levels</i>	346
<i>Conclusion</i>	349
<i>Chapter summary</i>	349
<i>Chapter discussion</i>	350
13 Human adaptability to biological stressors	354
<i>Malnutrition</i>	354
<i>Protein-calorie malnutrition</i>	355
<i>Micronutrient deficiencies</i>	361
<i>Overnutrition and conclusion</i>	366
<i>Infectious disease</i>	368
<i>The impact of biological stressors on human biology</i>	380
<i>Chapter summary</i>	381
<i>Chapter discussion</i>	382
14 Human biology in the modern world	387
<i>General stress</i>	387
<i>Adiposity and obesity: are we eating ourselves to death?</i>	395
<i>Pollution: the fouling of the environment</i>	401
<i>Possible reduced selective forces</i>	406
<i>Conclusion</i>	412
<i>Chapter summary</i>	412
<i>Chapter discussion</i>	413

15 Human biological variation: a look to the future and some final thoughts on ethics	420
Human biology in the future	420
Final thoughts on the ethics of human biology research	425
What is normal?	429
Chapter summary	431
Chapter discussion	432
Glossary	433
Index	451
6 Human biological variation in the skeleton: a window on the past	167
Introduction to skeletal biology	167
Palaeoanthropology	167
Individual and population differences in the skeleton	167
The elements in human biology	168
Forensic anthropology	169
Palaeopathology	171
Ethical issues	173
Chapter summary	176
Chapter discussion	176
7 Genotypic traits	181
Genotypic traits in human biology	181
Genetic variation in human biology	181
Human biology	181
Chapter summary	182
Chapter discussion	182
8 Tracing the origins of modern Homo sapiens	227
Tracing the origins of modern Homo sapiens	227
The impact of biological stress on human biology	227
Tracing the movement of modern Homo sapiens	227
Conclusion	226
Chapter summary	227
Chapter discussion	227
9 Demography: population growth and development	252
Population growth	252
Demography of human populations	252
Human population growth	252
Chapter summary	258
Chapter discussion	259
12 Human adaptability to physical stressors	325
Limiting factors, tolerance, and environmental physiology	325
Adaptation to cold and heat	328
Adaptation to high altitude	341
High activity levels	346
Conclusion	349
Chapter summary	349
Chapter discussion	350
13 Human adaptability to biological stressors	354
Malnutrition	354
Protein-calorie malnutrition	355
Micronutrient deficiencies	361
Overnutrition and conclusion	366
Infectious disease	368
The impact of biological stress on human biology	368
Chapter summary	381
Chapter discussion	382
14 Human biology in the modern world	387
General stress	387
Alcohol and obesity: the changing environment	401
Pollution: the fouling of the environment	401
Possible reduced selective forces	406
Conclusion	412
Chapter summary	412
Chapter discussion	413
