List of contributors	xiii
1 Antimicrobial and antioxidant properties of phytochemicals: current status and future perspective	1
<i>Bhanu Prakash, Akshay Kumar, Prem Pratap Singh and L.S. Songachan</i>	
1. Introduction	1
2. Plants as a source of antimicrobial and antioxidant agents: a historical perspective	2
3. Phytochemicals as a source of antimicrobial agents	3
4. Phytochemicals as a source of antioxidant agents	17
5. Phytochemicals as a source of functional food ingredients	19
6. Mechanism of action	19
7. Current existing limitations and role of modern science and technological innovations to boost the antimicrobial and antioxidant potential of phytochemicals in the food system	27
7.1 Use of waste material	28
7.2 Extraction technologies of phytochemicals	29
7.3 Biotechnology approaches	29
7.4 Nanotechnology approach	29
7.5 Bioinformatics	33
7.6 Mathematical modeling	33
7.7 Regulatory approval	34
8. Conclusion	34
Acknowledgments	34
References	35
Further reading	44
2 Functional food ingredients from old age cereal grains	47
<i>P. Anjali and P. Vijayaraj</i>	
1. Introduction	47
2. Taxonomic classification of millets	47
3. Global millet production and consumption	49
4. The general structure of millet grains	51
5. Millets: from coarse cereals to nutri grains	51

6.	Millet carbohydrates	59
6.1	Starch	59
6.2	Soluble sugars	62
7.	Millet proteins	65
7.1	Digestibility of millet proteins	67
7.2	Millet proteins—applications	68
8.	Millet lipids	68
8.1	Sorghum wax as edible biofilm	70
9.	Millet nutraceuticals	70
9.1	Phenolic acids	70
9.2	Tannins	73
9.3	Steryl ferulates	73
9.4	Carotenoids	74
10.	Antinutrients in millets	74
10.1	Phytic acid	74
10.2	Oxalates	74
10.3	Protease inhibitors	75
10.4	C-glycosylflavones	75
11.	Health benefits of millets	75
11.1	Prebiotic and probiotic source	76
11.2	Antioxidants	76
12.	Effect of processing in millet nutrition	79
13.	Conclusion and future perspectives	81
	References	82

3 Aquatic plants as a natural source of antimicrobial and functional ingredients 93

Km Pooja, Sapna Rani, Vikrant Rana and Gaurav Kumar Pal

1.	Introduction	93
2.	Seaweeds	94
3.	Seaweeds proteins	94
4.	Bioactive compounds	95
5.	Seaweed-derived bioactive hydrolysates/peptides	96
6.	Methods used for the release of bioactive peptides	97
7.	Computational approaches for exploring biological activity of peptides	99
8.	Antimicrobial activity of the seaweed-derived bioactive compounds	100
9.	Functional activities of the seaweed-derived bioactive compounds	102
9.1	Antioxidative activity	102
9.2	Antitumor activity	104
9.3	Neuroprotective activity	105
9.4	Anticoagulant activity	105
9.5	Immunomodulatory activity	106
9.6	Antiobesity activity	107
9.7	Antidiabetic activity	107

10.	Utilization of seaweeds and their derivatives in healthier food products	108
11.	Conclusion	109
	References	109
4	Antimicrobial properties of selected plants used in traditional Chinese medicine	119
	<i>Mishri Lal, Sandip Kumar Chandraker and Ravindra Shukla</i>	
1.	Introduction	119
2.	Character and significant features of Traditional Chinese medicine	120
3.	Formulations of traditional Chinese medicinal plants	120
4.	Antimicrobial properties of some common plants used in traditional Chinese medicine	121
4.1	<i>Panax ginseng</i> C. A. Mey	121
4.2	<i>Ginkgo biloba</i> L.	122
4.3	<i>Ephedra sinica</i> stapf	123
4.4	<i>Artemisia annua</i> L.	124
4.5	<i>Alpinia officinarum</i> hance	124
4.6	<i>Angelica sinensis</i> (oliv.) diels	125
4.7	<i>Arctium lappa</i> L.	126
4.8	<i>Astragalus membranaceus</i> (fisch.) bunge	128
4.9	<i>Chrysanthemum morifolium</i> ramat	128
4.10	<i>Lycium chinense</i> mill	129
4.11	<i>Myristica fragrans</i> houtt	130
4.12	<i>Paeonia lactiflora</i> pall	130
4.13	<i>Paeonia suffruticosa</i> andrews	131
4.14	<i>Polygonum multiflorum</i> thunb	132
4.15	<i>Rheum palmatum</i> L.	133
4.16	<i>Salvia miltiorrhiza</i> bunge	134
4.17	<i>Schisandra chinensis</i> (turcz.) baill	134
4.18	<i>Scutellaria baicalensis</i> georgi	135
5.	Conclusion	136
	References	136
5	Natural products from plants: recent developments in phytochemicals, phytopharmaceuticals, and plant-based nutraceuticals as anticancer agents	145
	<i>S. Priya and P.K. Satheeshkumar</i>	
1.	Plants: nature's chemical factories	145
2.	Cancer and chemotherapeutic targets	146
3.	Major classes of anticancer molecules	147
4.	Anticancer compounds from plants	148
5.	What is an ideal anticancer molecule?	149
6.	Commercial success stories	150
7.	Why do we need more medicines for cancer treatment?	151

8.	Traditional medicine resources for anticancer molecules	152
9.	High throughput screening for molecule identification	153
10.	Neutraceuticals with anticancer properties	154
11.	The proposed mechanisms of anticancer activity	155
12.	Can food ingredients be therapeutic?	156
13.	Our studies	157
14.	Future perspectives	158
	References	159
6	Foodborne microbial toxins and their inhibition by plant-based chemicals	165
	<i>Somenath Das, Anand Kumar Chaudhari, Akanksha Singh, Deepika, Vipin Kumar Singh, Abhishek Kumar Dwivedy and Nawal Kishore Dubey</i>	
1.	Introduction	165
2.	Microbial toxins in food system	166
3.	Factors affecting microbial toxins secretion in food system	168
4.	Detection of microbial toxins in food system	169
4.1	Thin layer chromatography	171
4.2	High-performance liquid chromatography	171
4.3	High-performance thin layer chromatography	177
4.4	Gas chromatography-mass spectroscopy	177
4.5	Liquid chromatography-mass spectroscopy	177
4.6	Matrix-assisted laser desorption ionization-time of flight mass spectroscopy	177
4.7	Fourier transforms infrared spectroscopy	178
4.8	Nucleic acid-based techniques	178
4.9	Immunological-based techniques	178
4.10	Biosensor for toxin determination	179
4.11	Fluorescence microscopy	179
5.	Safety limits in food system	179
6.	Major groups of phytochemicals inhibitory to mycotoxins	180
6.1	Terpenes	181
6.2	Phenols	182
6.3	Nitrogen containing compounds	182
6.4	Lectins	188
7.	Phytochemicals against microbial toxins	190
8.	Conclusion and future perspectives	191
	References	192

7	Recent advances in extraction technologies of phytochemicals applied for the revaluation of agri-food by-products	209
	<i>Sandra Pimentel-Moral, María de la Luz Cádiz-Gurrea, Celia Rodríguez-Pérez and Antonio Segura-Carretero</i>	
1.	Introduction	209
2.	Phytochemicals from agri-food by-products	210
2.1	Carotenoids	210
2.2	Phenolic compounds	211
2.3	Dietary fiber	213
3.	Extraction technologies applied for the revaluation of agri-food by-products	214
3.1	Conventional extraction	214
3.2	Ultrasound-assisted extraction	216
3.3	Microwave-assisted extraction	219
3.4	Pressurized liquid extraction	222
3.5	Pulsed electric field	225
3.6	Supercritical fluid extraction	226
3.7	Gas expanded liquids	231
4.	Concluding remarks	231
	References	232
8	Application of nanotechnology to boost the functional and preservative properties of essential oils	241
	<i>Akshay Kumar, Priyanka Singh, Vishal Gupta and Bhanu Prakash</i>	
1.	Introduction	241
2.	Preservative and functional properties of essential oils	242
3.	Nanotechnology: an efficient approach to enhance the bioactivity of essential oils	245
4.	Delivery agents and techniques used for encapsulation of essential oils	246
4.1	Starch	246
4.2	Cellulose	255
4.3	Pectin	255
4.4	Guar gum	256
4.5	Chitosan	256
4.6	Alginate	256
4.7	Carrageenan	256
4.8	Dextrans	257
4.9	Cyclodextrin	257
5.	Technique used for encapsulation of essential oils	257
6.	Conclusion	258
	References	260
	Further reading	267

9	Biotechnology: a tool for synthesis of novel bioactive compounds	269
	<i>Sandeep Kumar, Praveena Bhatt and Sarma Mutturi</i>	
1.	Introduction	269
2.	Exploration and screening of novel bioactive compounds from microbial sources	270
2.1	Functional and homology screening	271
2.2	Other metagenomic surveys	272
3.	Synthesis of oligosaccharides and peptides as bioactive compounds	276
3.1	Synthesis of oligosaccharides using microbial-derived enzymes	277
3.2	Bioactive peptides	283
4.	Bioprobes for qualitative and quantitative detection of bioactive molecules/compounds	288
4.1	Biosensors for screening and detection of bioactive molecules	290
5.	Systems biology enabled synthesis of bioactive compounds	297
	References	301
	Further reading	315
10	Prospects of omics technologies and bioinformatics approaches in food science	317
	<i>Bhanu Prakash, Prem Pratap Singh, Akshay Kumar and Vishal Gupta</i>	
1.	Introduction	317
2.	Foodomics: omics in the field of food science and nutrition	318
3.	Role of bioinformatics in food science	321
4.	Aflatoxin B ₁ inhibitory potential and therapeutic characterization of selected test compounds: selection of the receptor molecules	325
5.	Modeling of the receptor molecules (<i>ver-1</i> and <i>omt A</i>)	325
6.	Selection of ligand molecules	326
7.	Physicochemical characterization and drug-likeness scores of the compounds along with toxicity and their expected LD ₅₀ value	326
8.	Docking	326
9.	Observation	330
10.	Concluding remarks and future perspectives	332
	Acknowledgment	335
	References	335
	Further reading	340
11	Phytochemicals: extraction process, safety assessment, toxicological evaluations, and regulatory issues	341
	<i>Monika Thakur, Karuna Singh and Renu Khedkar</i>	
1.	Introduction	341
2.	Phytochemicals	342
3.	Types of phytochemicals	342
4.	Phytochemicals and health benefits	343
5.	Extraction process of phytochemicals	343

5.1	Plant material	347
5.2	Choice of solvents	347
5.3	Choice of solvents	348
5.4	Extraction procedures	349
6.	Ethnobotanical studies on the use of phytochemicals	350
7.	Toxicological study	350
8.	Regulatory assessment	352
9.	Conclusion	356
	References	356
12	Phytochemicals: intellectual property rights	363
	<i>Manoj Kumar Singh, Sandeep Kumar Singh, Anand Vikram Singh, Hariom Verma, Prem Pratap Singh and Ajay Kumar</i>	
1.	Introduction	363
1.1	Phytochemical extraction	363
1.2	Phytochemicals in pediatrics and sports drink composition	365
1.3	Biological activity of the phytochemicals	366
1.4	Use claim of phytochemicals in patents	366
1.5	Plants and their extracted phytochemicals in legal terms	367
1.6	Patent protection: plant varieties and farmer's rights act (2001)	368
1.7	Protection through the biological diversity act (2002)	368
1.8	Geographical indication of goods (registration and protection) act (1999)	369
1.9	Traditional knowledge digital library (TKDL)	369
1.10	Important medicinal plants and their uses as medicines in India	370
2.	Conclusion	373
	References	373

13	Innovations and future trends in product development and packaging technologies	377
	<i>Bababode Adesegun Kehinde, Ishrat Majid, Shafat Hussain and Vikas Nanda</i>	
1.	Introduction	377
2.	High hydrostatic pressure	377
2.1	Sterilization mechanism of HPP	378
2.2	Food-based applications of HPP	379
2.3	Fruits and vegetables	379
2.4	Milk and milk products	379
2.5	Cereal grains and legumes	386
2.6	Advantages of High Pressure Processing	386
2.7	HPP limitations	386
3.	PEF	387
3.1	Principle	387
3.2	Mechanism of microbial inactivation	388

3.3	Factors affecting PEF efficiency	388
3.4	Processing conditions	388
3.5	Electric field	388
3.6	Pulse wave shape	389
3.7	Treatment time and temperature	389
3.8	Product-related factors	389
3.9	Microbial factors	390
3.10	Advantages	390
4.	Cold plasma technology	390
4.1	Features of cold plasma technology	391
4.2	Principle of plasma	391
4.3	Classification of plasma	392
4.4	Applications in food processing	392
4.5	Inactivation of enzymes	392
4.6	Modification of food starches	392
4.7	Modification of packaging materials	393
5.	Nanotechnology	393
5.1	Food application	394
5.2	Nanocomposites	394
5.3	Lipophilic bioactives	394
5.4	Nanotechnology in dairy foods	395
6.	Future prospects of food packaging	395
7.	Biopackaging of food	396
8.	Active packaging	396
9.	Biosensors and food packaging	397
9.1	Categories of sensor packaging systems	397
9.2	Bioactive paper sensor	397
9.3	Enzymatic biosensor	397
10.	Conclusion	398
	References	398
