

Contents

Introduction	7
1 Characteristics of the heat and thermochemical treatment of materials	9
2 Characteristics of the semi-products suitable for the processes of thermochemical treatment	16
3 Annealing types of the semiproducts used prior to processes of thermochemical treatment	22
4 Physico-chemical fundamentals of thermochemical treatment ...	28
5 Oxidation of metals	33
6 Controlled atmospheres	56
6.1 Classification of controlled atmospheres	60
6.2 Manufacturing methods and equipment for generation of controlled atmospheres	63
6.3 Controlled atmospheres prepared without generator	70
6.3.1 <i>Nitrogen-hydrogen atmosphere</i>	70
6.3.2 <i>Nitrogen-methanol atmosphere</i>	71
6.4 Monitoring and regulation of controlled atmospheres	73
6.4.1 <i>A dew point measuring device</i>	73
6.4.2 <i>Infrared gas analyzer</i>	74
6.4.3 <i>Gas analysis probe oxygen analyzer</i>	74
6.4.4 <i>Hydrogen sensor</i>	75
6.4.5 <i>Direct methods used to measure carbon potential of atmosphere</i>	76
7 Carburization	81
7.1 Carburization in solid environment.....	85
7.2 Carburization in gaseous environment.....	86
7.3 Carburization in molten salts.....	88
7.4 Carburization under vacuum.....	88
7.5 Plasma carburization	89
7.6 Hardening after carburization process	90
8 Carbonitridation	99

9 Nitridation	109
9.1 Nitridation in a liquid medium	111
9.2 Nitridation in gas	111
9.2.1 <i>Mechanism of a nitrified layer formation</i>	111
9.2.2 <i>Atmospheres for nitridation process</i>	116
9.2.3 <i>Phase composition of a nitrified layer</i>	117
9.2.4 <i>Process of nitridation and diffusion annealing in gases</i>	119
9.3 Ionic nitridation	121
10 Nitrocarbonization	132
11 Boronization	138
12 Surface hardening	146
13 Special surface layers	150
13.1 Methods of physical vapour deposition (PVD).....	150
13.2 Chemical vapour deposition (CVD).....	158
13.2.1 <i>Ceramic coating deposition</i>	159
13.2.2 <i>Diffusion chrome plating</i>	159
13.2.3 <i>Diffusion silicon plating</i>	160
13.2.4 <i>Diffusion aluminium plating</i>	161
13.3 Electrochemical deposition	163
13.4 Anodizing	164
13.5 Chemical deposition	166
13.6 Thermal spraying.....	169
14 Deformations arising in the processes of heat treatment and thermochemical treatment	176
15 Cracks arising in the processes of heat treatment and thermochemical treatment	185
16 Equipment for plasma thermochemical processing	192
17 Nanocrystalline surface layers	195
17.1 Types of nanocrystallization techniques	196
17.2 Surface nanocrystallization by air blast shot peening.....	199
17.3 Mechanisms of surface nanocrystallization	
by severe plastic deformation	203
17.3.1 <i>Pure Iron</i>	203
17.3.2 <i>Aluminium based alloy</i>	208

17.4 Mechanical properties of the nanostructured surface layer	211
17.5 Influence of nanocrystallined surface layers	
of fatigue properties.....	214
17.5.1 <i>Fatigue life of 50CrMo4 steel treated with severe</i>	
<i>shot peening</i>	214
17.5.2 <i>Fatigue life analysis of AW 7075 aluminium alloy</i>	
<i>treated with various shot peening intensities</i>	227
Chemical composition of technical materials mentioned	
in the textbook	248
Summary	252
About the Authors	253
Subject Index	257
