

CONTENTS

Yi Luo

InP- based optoelectronics devices for optical fiber communications..... 1

J. Novotný

Incoherent light sources for optical communications (A retrospective view).....2

D. Nohavica

*GaInAsP/InP DC PBH lasers emitting in the wavelength region 1.07 - 1.67 μm ,
(A retrospective view)* 3

J. Novotný, O. Procházková, K Žd'ánský, J. Zavadil, F. Šrobár

Preparation and properties of rare -earth InP-based semiconductor compounds.....4

J. Zavadil, K. Žd'ánský, O. Procházková

Electro optical properties of InP epitaxial layers doped with rare-earth elements.....5

J.Voves, H. Čermáková

Optoelectronic devices simulation by means of TCAD tools.....6

F. Šrobár

A diagrammatic method for analysis of GaAs and InP based optoelectronic devices.....7

Shuisheng Jian

Progress of optical fiber communication and studying on fiber grating 8

V. Matějec, M. Chomát, M. Hayer

Development of special silica optical fibers for chemical sensing.....9

J. Kaňka, P. Peterka, P. Honzátko, V. Matějec, I. Kašík

*Er-doped twin-core fibre as a saturable-absorber-based tracking narrow-band
filter for fibre lasers*..... 10

M.Karásek

*Design criteria for Er^{3+} - Yb^{3+} codoped fibres for large -signal
high pump power applications*..... 11

J. Čtyroký J. Homola, , R. Slavík, M. Skalský, I. Tichý, P. Tobiška

Optical waveguide surface plasmon resonance sensors..... 12

Jinzhong Yu

AlGaInP visible quantum well lasers for information technology..... 13

J. Walachová, J. Zelinka, V. Vaniš, D.H. Chow, S. Karamazov, M. Cukr,

M. Zich, T.C. McGill

Testing of quantum well structures by BEEM/BEES..... 14

Shiyong Liu

Organic/polymer-based electroluminescent devices and their application..... 15

S. Nešpůrek

Polysilylenes - perspective materials for optoelectronics..... 16

E. Brynda

Grating coupler biosensors..... 17

Qiming Wang

Si- based optoelectronics devices and their applications..... 18

Ronghan Wu

GaAs- based optoelectronics devices for optical information processing technology..... 19

F. Schauer	
<i>Space-charge limited transient photoconductivity in polymers</i>	20
K. Žd'ánský and I. Hawkins	
<i>Slow decay of photoconductivity caused by tin-related DX centers in AlGaAs</i>	21
D. Nohavica, P. Gladkov, K. Žd'ánský	
<i>Preparation and properties of thick GaInP/GaAs layers for optoelectronic applications</i>	22
J. Bludská, I. Jakubec, L. Pekárek, D. Nohavica	
<i>InP, GaP and GaInP for the water photolysis by solar energy</i>	23
V. Malina, K. Žd'ánský, K. Vogel, P. Rossel, and B. Pécz	
<i>Ohmic and Schottky contacts to GaInP epitaxial layers</i>	24
A. Hospodková, E. Hulicius, J. Pangrac, K. Melichar, J. Oswald, T. Šimeček	
<i>Strained InGaAs/GaAs multiple quantum wells grown by MO VPE</i>	25
P. Gladkov, J. Weber	
<i>Low temperature photoluminescence properties of p and n-type $Al_x Ga_{1-x} As$ for $x > 0.42$</i>	26
